For the prosecution it was admitted that the formula was accurate, but it was contended that the mixture could not properly be described as a tonic or as invigorating, by reason of the extremely small proportions of gentian and of iron and ammonium citrate, which provided doses smaller than the minimum *B.P.* doses. The county analyst stated that the mixture was essentially coloured and flavoured chloroform water, and that chloroform had no tonic properties. It was also argued that the use of the word "cocktail," however qualified by the phrase "non-alcoholic," was misleading to the ordinary purchaser.

Counsel for the defence, Mr. R. A. Robinson, called two medical practitioners and a "man in the street" as witnesses. The latter stated that when feeling run down he had taken the tonic regularly for several weeks and it had improved his health notably. The medical witnesses refuted the suggestion that the mixture could have no tonic effect, and pointed out that proprietary articles and "tonic water," sold to all and sundry across the counters of grocers' and pharmacists' shops, should not, and did not usually, contain what might be called normal medicinal doses of their ingredients. In this connexion the composition of such preparations as Kruschen salts, Clark's blood mixture, and phospherine were referred to, and it was pointed out that quite small doses of iron and ammonium citrate were to be found in vinum ferri citratis (*B.P. Codex*) and in various stock mixtures described in many hospital formularies, especially those used at children's hospitals, and in the Admiralty's handbook of prescriptions for the Royal Navy. It was stated in the witness-box that the chloroform in the cocktail tonic caused a sensation of warmth in the stomach, and one medical witness added that he considered the public analyst's observation, to the effect that the cocktail tonic was essentially chloroform water, to be a spiteful comment.

The magistrates on retiring to consider their decision accepted counsel's suggestion that they should taste the preparation. On their return they announced that the summons was dismissed.

The *Manchester Guardian* on Oct. 18 gave a brief report of a civil action heard at Carlisle Assizes, the defendant being a temporarily registered medical practitioner, Herman Augapfel, M.D.Vienna. A six-year-old girl and her father claimed against Dr. Augapfel for the accidental scalding of her left hand in a Whitehaven surgery, with results described by the judge as disastrous. The defendant was attending to the girl's septic finger when by mistake he plunged her hand into boiling water without first testing the heat of the water. Evidence was given that the child was intended for a musical career, but would not now be able to become a pianist. Regret at the accident was expressed on behalf of Dr. Augapfel. The judge said that from many points of view the girl's hand was worthless. She was awarded £1,500 damages, and her father, who sued in respect of consequential loss to him, was awarded £55, in each case with costs.

C. P. Stevick (*N. Carolina med. J.*, 1945, **6**, 369) states that pertussis immunization of children before the age of 1 year is now required by State Law in North Carolina. The disease is now the third, or probably the second, leading cause of death among the reported communicable diseases in this State. On the basis of morbidity and mortality figures, immunization of children after the age of 6 months would probably result in a reduction of pertussis deaths within the next five years.

KING EDWARD'S HOSPITAL FUND

At a meeting of the General Council of King Edward's Hospital Fund for London, held on Dec. 13, Lord Wigram took the chair in the absence of the President, H.R.H. the Duke of Gloucester. Lord Wigram reported that it had been found possible, without trenching on reserves, to return to the pre-war figure of £300,000 for distribution in annual grants to hospitals.

"The pressure on hospital beds is exceptionally heavy," Lord Wigram said, "and we are doing all we can to encourage and assist the hospitals to overcome the many difficulties with which they are confronted in re-establishing services on a pre-war scale. It is known that the Government is contemplating far-reaching proposals with regard to the hospital services. The voluntary hospitals have a great contribution to make to the future hospital service of the country. We recognize the need to supplement their resources with support from public funds, and to weld the whole hospital service into something more of a system than it is to-day. The new proposals, however, must be such as to encourage and not to stifle voluntary initiative. Real freedom in planning and spending is essential, and is compatible with support from official sources. What is urgently needed is a central hospital board working through regional bodies entrusted with ample funds to build up and sustain all existing hospitals of good repute. These bodies would have a full knowledge of the local conditions, and their influence would be very great. Regional bodies, if properly constituted, could gradually develop a hospital service which would preserve a large measure of independence and variety in the individual hospitals. The Fund has already submitted to the Ministry a statement of principles outlining its views on a future hospital service. We also prepared and issued, a few months ago, a much more detailed report, entitled *Post-war Problems*, in which many of the questions that must arise have been discussed at length."

Income and Expenditure

Sir Edward Peacock said that the income for the year had been well maintained. Subscriptions and donations stood at £39,000. Legacies amounted to £122,600, and income from investments to £208,000. In addition £75,000 had been received from the Nuffield Trust for the Special Areas. After deducting expenses the net total came to £426,000 for 1945, compared with £335,600 for 1944. The ordinary distribution had been restored to £300,000, whereas in 1942, 1943, and 1944 it was reduced to £280,000, in order to provide some reserve for the heavy requirements of the hospitals after the war. It seemed that the total income would show a satisfactory balance for the year of over £116,000. There was so far no evidence of any falling off in receipts, despite recent rumours in the press. The voluntary contributions to hospitals were something that should be guarded in every possible way. No mere Government subsidy could take their place, for they represented the devoted efforts of millions of people to help the community.

Sir Ernest Pooley, chairman of the Distribution Committee, presented the report of the committee and the schedules containing the list of grants to hospitals and convalescent homes amounting to £300,000, and these were adopted. A report moved by Lord Donoughmore providing for a series of bursaries in hospital administration was approved. It had been suggested that the Fund might take action to help to fill the gap created by the war by training younger men and women of ability as hospital administrators. The bursaries were to be for a period of twelve months, renewable for a further period of six months, and were of the value of £600 per annum. It was proposed to provide twelve, tenable at some of the larger voluntary hospitals.

The Standard of Hospital Services

Lord Horder referred to the stimulating account from the chair of the recent activities of the Fund in several directions. There could be no question that the King's Fund was carrying out the objective laid down by Act of Parliament. The wording was significant; the Fund was empowered to apply its moneys for the support, benefit, or extension of some or any of the hospitals of London, and to do all such things as might be conducive thereto. He spoke as one who had watched the administration of the hospitals for many years with deep interest, and he took the view that the more the King's Fund could do to maintain and raise the standards of hospital services the better for all concerned. Here were a number of hospitals which were accepted by the public as efficient, and the good work they were doing was the result of slow evolution assisted very greatly by the work of the King's Fund. He held that it would be a very foolish Minister of State who would hope to set up new and alternative machinery for a hospital service, whether in London or the Provinces, to replace the existing institutions. The Minister of Health was known to be a forceful person, and Lord Horder was optimistic that he would also reveal statesmanlike qualities, of which the chief was forbearance.

THE HEALTH OF BIRMINGHAM

New low records in mortality tables are shown in the report of the Medical Officer of Health for Birmingham (Dr. H. P. Newsholme) for 1944. The death rate (11.2) is below any previous war-year figure; in 1940 the rate was 14.3. The infant mortality rate for the first time fell below that for England and Wales as a whole, being 42 for 1,000 live births compared with 46 for the whole country, while the maternal mortality rate fell sharply to 0.95, which is only about half of what it was during the earlier war years. The incidence of notifiable diseases, with the principal exception of tuberculosis, was well below the average of the previous ten years. Diphtheria fell markedly, and the type was less severe, the case mortality falling to 2.7% compared with about 14% during the first twenty years of this century. The disquieting thing is the further increase, though a small one, in the incidence of pulmonary tuberculosis. The notification rate to the 1,000 population was 1.20, equal to the average figure for the years 1931–5, since when it fell, in 1939, to 0.82. The death rate (0.70) is slightly down, and in fact is comparable with the previous lowest rate recorded in 1938; but while this low rate, in view of the progressive increase in notifications during the war, may reflect a welcome tendency to start treatment at an earlier stage, it is feared that the wartime impetus to the incidence of tuberculous pulmonary disease is likely to determine a fresh rise in the death rate.

Mass Radiography: An Analysis

The mass radiography service was introduced into Birmingham in October, 1944, and by March of this year 13,692 people had been examined. Those who are referred from the mass radiography department with a tentative diagnosis of pulmonary tuberculosis are examined at the antituberculosis centre after a reference to, and a brief clinical statement from, their doctor. It is stated that this "has enabled the practitioner to obtain knowledge of all cases detected within his practice with a suspicious large film, and the clinical statement obtained from the practitioner has been of advantage to the tuberculosis medical officers." The programme of the scheme deals, in the order stated, with the following groups: employees in two large factories with well-organized medical departments; university students; employees in two departments of the local authority; school-leavers; civil servants; employees of a large warehouse; and re-examination of selected age groups from those originally examined in the first two factories. Of the 13,700 miniature films taken, 1,401 suggested some abnormality and large films were made; the abnormality was shown in 538 of the large films, but in 165 cases it was judged to be of no clinical significance, and of the 367 cases which went on for clinical examination, 168 were referred for further investigation. Of these 168 (1.2% of the number originally examined) 35 were found to require no treatment, 71 were supervised from the antituberculosis centre, 39 were sanatorium cases, 20 were referred to general practitioner or to a tuberculosis officer outside Birmingham, and 3 failed to attend. The number of cases of active pulmonary tuberculosis detected was 50, or 0.36% of those initially examined. It is considered from an analysis of the results that in Birmingham there are some 2,700 undetected cases of active pulmonary tuberculosis and 800 individuals are voiding tubercle bacilli in their sputum unknown to their doctor or to themselves. The estimated total number of examinations is 60,000 a year.

MEDICAL RESEARCH IN SOUTH AFRICA

The South African Institute for Medical Research, Johannesburg, continues its active work in a variety of fields under the directorship of Dr. E. H. Cluver, who holds also the post of professor of preventive medicine in the University of the Witwatersrand. Close co-operation between the Institute and the University is maintained; three other senior members of the staff are heads of departments at the Medical School with the rank of professor.

The annual report for 1944 is published from P.O. Box 1038, Johannesburg. The personnel of the staff comprised 187 Europeans and 162 Africans. Several scientific societies held meetings at the Institute during the year, when demonstrations were given of some of the work being carried on in the laboratories. The South African Medical Corps Establishment continued to operate under Dr. Cluver in his capacity as director of pathology to the Union Defence Force. One section of the report is devoted to this war work, which included the manufacture of crude penicillin filtrate for external wounds and skin diseases at a time when the supply of pure penicillin even for military purposes was still strictly rationed. Another section describes briefly research on a number of diseases carried out during the year. In the biochemistry department Dr. F. W. Fox, in conjunction with Prof. J. Irving of Capetown University, pursued his studies of bread-nutritional matters. The Institute's routine diagnostic work, research resulting therefrom, and the adoption after trial of improved laboratory aids to diagnosis were supervised by the deputy director, Dr. George Buchanan. Apart from the routine laboratory investigation of more than 340,000 specimens the medical officers gave attention to 3,000 patients referred by medical practitioners for various tests and examinations at the Institute. Post-mortem examinations carried out at the Johannesburg General Hospital numbered 793, and, in addition to these, 82 necropsies were performed at the Institute's mortuary. During the year 829 pairs of lungs were examined on behalf of the Miners' Phthisis Medical Bureau. Big demands were again made on the serum department because of war requirements of the Union and Allied Governments. Large quantities of stock and autogenous vaccines were produced during the year. The report ends with notes from the Port Elizabeth and Bloemfontein Branches, and a list of publications.

STAFFING OF MAUDSLEY HOSPITAL

A report on the organization of the medical staff of Maudsley Hospital in relation to post-war developments has been made to the London County Council.

When it is again in full use Maudsley will have accommodation for 290 in-patients, including 30 beds for children, and a new block with 60 beds which was originally intended for private patients. There are also a large and growing out-patients department, clinics at three hospitals in the north and east of London, and observation ward work at one hospital in the south. The medical staff also act as consultants in psychiatry to certain general hospitals. Apart from the positions of medical superintendent and director of clinical psychiatry, the pre-war fixed staff of the hospital consisted of three part-time consultant psychiatrists, one first assistant medical officer, six part-time medical officers, six second assistant medical officers, and four other assistants. The L.C.C. proposals for the post-war medical establishment provide for the equivalent of 28½ whole-time units as against 16½ units before the war. For the positions of physician, paediatric physician, senior physician in psychotherapy, and assistant clinical director a fixed salary of £1,000 a year is proposed. The scale of salary suggested for the assistant physicians is £700–£800, with an allowance of £50 to the officer acting as deputy medical superintendent; for the senior registrar £625–£700; for the junior registrar £470–£570, plus £50 for any holder of a diploma or degree in psychological medicine; and for house-physicians £250. The position of psychotherapist, a part-time appointment, will carry a remuneration of £300 for five sessions of three hours each for 48 weeks a year.

It is pointed out that one of the functions of the Maudsley Hospital is to train teachers of psychiatry for the medical schools, and that it is clear that, quite apart from the ordinary requirements of the psychiatric treatment given at the hospital, the medical establishment must include a sufficiency of staff of the right quality to provide undergraduate and postgraduate education at a high level. The report of the Mental Hospitals Committee of the Council states that the suggestion of a fixed salary of £1,000 for the six positions of physician, paediatric physician, and senior physician in psychotherapy "is based on the expectation that there will be a flow of whole-time workers to higher positions elsewhere."

Reports of Societies

DISCUSSION ON D.D.T.

A discussion on D.D.T. (dichloro-diphenyl-trichlorethane) was held in the Section of Experimental Medicine of the Royal Society of Medicine on Dec. 11. Dr. E. N. ALLOTT, and afterwards Dr. GEORGE GRAHAM, occupied the chair.

Toxic Effects

Prof. G. R. CAMERON spoke of the risks likely to be encountered in the production and use of the new insecticide—the risk to the skin from spraying or splashing, the risk by inhalation of mists or smokes, and the risk of contamination of food or water by accidental mixture with the compound. The powder form, he said, was only to a slight extent soluble in water, and very difficult for the skin to absorb, but the risk was very much greater with oily solutions or suspensions, which were absorbed quite easily through the skin and mucous membrane. In rats and guinea-pigs a single dose of D.D.T. was relatively non-toxic as a powder, but in oily form, mixed with liquid paraffin, anything between 150 and 800 mg. per kg. body weight was fatal for the rat, and between 400 and 1,000 mg. for the guinea-pig. For these animals D.D.T.—in these heavy doses—was two or three times as toxic as aspirin. If D.D.T. in a bland fluid like paraffin were injected subcutaneously, large quantities could be used without ill effects. Single doses, therefore, had no great toxicity, but it was another story with repeated doses of oily solutions. In small animals about one-fourth or one-fifth of the fatal single dose, when repeatedly administered, gave rise to symptoms and ultimately caused death. Of the mediums for oily suspensions, olive oil seemed to be the most fatal.

As for the risk to man, certain experiments were made with 58 soldiers who volunteered to wear undergarments heavily impregnated—1%, weight for weight—with D.D.T. Each of these men had had exposed to his body something like 70 or 80 g. of D.D.T., and had worn these garments for from four to six weeks. Nothing happened to give rise to anxiety. The men who carried out the impregnation of the garments and were exposed to quite heavy concentrations of D.D.T. in kerosene also suffered no harm, except for a slight dermatitis in some of them, which quickly disappeared. Two or three of these men also showed a significant rise in blood calcium. The conclusion drawn was that contact with D.D.T. in the form of a slightly moistened powder need give rise to no concern. Some experiments had been made with the object of finding out what happened when wound surfaces were exposed to D.D.T. powder. In wound surfaces in animals there appeared to be no difference in the healing of those which had been covered with the powder and those which had not.

The symptoms of D.D.T. poisoning, after a very heavy single dose in animals, were cold skin, diarrhoea, and characteristic nerve signs, sensitiveness to stimuli of all kinds, weakness of muscles, and, in the last stage, tremor. Death occurred from respiratory failure within 24 or 48 hours. The animal might recover, if the experiment had not gone beyond a certain stage, on the complete washing away of the D.D.T. No characteristic lesion was found in the central nervous system. With small repeated doses the animal began eventually to lose weight and develop complete anorexia; nervous and muscular signs came and went, hypersensitiveness was also present, and death came in a quiet fashion from exhaustion. A leucocytosis became pronounced as the animal began to deteriorate. In conclusion Prof. Cameron said that in man no ill effects were to be apprehended with D.D.T. powders or sprays when the substance was used in low concentration (not above 1%). Care must be taken in handling concentrates, and any of the substance which got on the skin should be washed off with soap and water as soon as possible. People working with these concentrates for any length of time should wear gloves and other protective garments, and when spraying should use respirators.

Experience in the Field

Dr. H. D. CHALKE said that when Naples was occupied in October, 1943, the city was in a terrible condition. It was overcrowded, large numbers of people were living in caves, and no soap was available. The Neapolitans, including the members of the medical profession, were in a state of apathy and despair. Epidemics, particularly typhoid, were feared. A typhoid epidemic did not arise, but typhus cases began to be reported. The Rockefeller Foundation team arrived early in December and immediately started mechanical dusting with the American powder M.Y.L. Only towards the end of the period was D.D.T. used. It was the American idea of mechanical dusting with power sprays which, he believed, had most to do with the sudden stoppage of what bade fair to be a considerable outbreak of typhus by an early week in January, 1944. The cases reported weekly got up to 300, but the following week they came down to half that number. By early March it was evident that the outbreak was petering out. The defeat of the typhus epidemic in Naples (there were about 1,800 cases) was not entirely due to the use of D.D.T., but to the mechanical means of dusting insecticide powders, whereby a large number of people could be disinfested without being undressed. At the same time he must not be taken as saying that D.D.T. did not play an important part. As soon as sufficient supplies were obtained it was realized what an enormously valuable weapon it was.

D.D.T., he thought, was an insecticide for masses of people who were not under discipline. In the Army a bathing and cleansing routine was possible, but with D.D.T. it did not matter that the people were unwashed or congregated in shelters —in fact, it was an advantage that they did not change their clothing once a week; the insecticide powder was thereby assured of longer contact. The lesson for the British Army was that infestation could be controlled without the cumbersome steam disinfestors, and the hygiene section could be released for more purely hygienic and sanitary duties. The infestation rate in 1944 was just about half what it had been in 1943. Impregnated shirts were issued to the Army on a large scale, but no toxic effects were recorded. With 5% D.D.T. in kerosene it became quite a simple matter to control the bed bug. A point to bear in mind in using D.D.T. spray was to have a coarse spray: not coarse enough to be wasteful, but giving so near an approach to a liquid that what was ejected remained on the walls of a room and did not all settle on the floor.

An outbreak of plague at Algiers at about the same time was also dealt with successfully by D.D.T. Early in 1944 it was realized that D.D.T. had enormous possibilities in malaria control; 2 to 5% solutions of D.D.T. in kerosene were found to have a most remarkable and persistent effect on the mosquito. Spraying from the air was employed over a width of 115 yards and a length of 700 yards on each flight; in the southern part of the Po Valley, which was terribly infested, mosquitoes and flies became almost non-existent.

It was assumed from the beginning that D.D.T. solutions in kerosene were toxic, and the operators were issued with protective clothing. Two cases of poisoning were reported, but more likely they were cases of heat-stroke, and they quickly passed off. D.D.T. was undoubtedly the most remarkable insecticide yet produced. It had been one of the most potent factors in winning the war in Italy, for in spite of the large incidence of malaria in the civil population the Army remained relatively free.

Major K. R. HILL described a fatal case, of which a full account was given in the *Journal* of Dec. 15 (p. 845). Dr. R. A. M. CASE discussed experiments undertaken at the Royal Naval Physiological Laboratory and described at length in the same issue (p. 842).

Dermatitis from Impregnated Clothing

Lieut.-Col. HILLIER, speaking for the dermatological service in the B.L.A., said that the B.L.A. was the first Force to go overseas with impregnated shirts. They went to France in June, and by September a great number of cases of dermatitis had occurred, undoubtedly associated with the shirts. Cases were now being seen in Germany at the rate of 300 or 400 a month, so that there must have been several thousand cases. A number of tests were carried out and the results were practically all negative. The dermatitis affected particularly the areas where the shirt was pressed against the skin. The skin was almost invariably purpuric. He was quite sure that it was not due to D.D.T. as such. It was considered whether it might be due to some alteration in the D.D.T., perhaps in the washing process, but all investigations had failed to convict D.D.T. directly. The striking fact was that this extraordinary rash was something new to the B.L.A., it did not appear elsewhere, and the B.L.A. was the one Force which had gone out with impregnated shirts. Another interesting point was that the men went over to France in remarkably clean condition. The incidence of lousiness was only 1 per 1,000 a month, and that of scabies about the same. This state of affairs continued so long as they were in Normandy, but on moving into Belgium and Holland, with greater contact with the civilian population, the incidence of trouble due to *Pediculus pubis* rose by eight or ten times, though that due to *Pediculus corporis* remained absolutely steady. D.D.T. unfortunately had no effect on scabies at all.

It was agreed to pass on to the Council of the Section a recommendation that, in view of the fact that D.D.T. can be purchased from any chemist, legislation should be sought governing the nature of the product and that it should be stated on the label what percentage of D.D.T. was contained, the nature of the solvent, and accurate directions for use.

HORMONE THERAPY OF CANCER

The present position of hormone therapy in the treatment of cancer was the subject of a discussion in the Medical Society of London on Dec. 10, Sir JAMES WALTON presiding.

Work on the Oestrogens

Prof. E. C. DODDS said that it had been claimed for every endocrine organ at one period or another that it was capable of producing a substance which would effect a cure or amelioration of cancer, but he thought it could be said that the whole of these claims remained unverified save only in respect of the oestrogens and, possibly—he used the word "possibly" advisedly—the androgens. The prostate had been recognized for 50 or 60 years to be under control of the testes, and it had been thought that removal of the testes might affect prostatic enlargement beneficially. Nothing very much happened until the experimental work of Huggins, professor of surgery in the University of Chicago, who had shown that the prostate could be controlled by hormonal influence. Huggins started his investigations on the clinical aspect of carcinoma of the prostate with the knowledge that acid phosphatase was a measure of prostatic activity, and that such activity could be increased by injecting androgens and decreased by injecting oestrogens. If a patient with carcinoma of the prostate and bony metastases were castrated there was shown to be a diminution of prostatic activity due to the withdrawal of the androgens secreted by the testes—a result shown biochemically by an ultimate fall in acid phosphatase, and clinically by a considerable improvement in the patient, with diminution of local obstructive symptoms and secondary symptoms due to pressure.

What was meant by the term "oestrogens"? It had been known from time immemorial that the ovary was associated with the cyclical activity of the female, and therefore it was natural that biochemists should try to obtain an extract from the ovary with a view to reproducing these cyclical changes. By 1930 the structure of the natural oestrogens was determined. These were substances which were capable of reproducing the greater part of the female sex hormone. It was unfortunate that they had to be injected either subcutaneously or intramuscularly—given by mouth they were almost inactive.

Synthesis of Stilboestrol

In his own laboratory, Prof. Dodds continued, after some eight years' work, three substances were found which were now in use in clinical medicine. Of these synthetic oestrogens the best known was stilboestrol, which was used in the treatment of gynaecological and obstetrical disorders and in carcinoma of the prostate. These synthetic oestrogens were very cheap and simple to make, were not controlled by any patent restrictions, and were active when given by mouth. The dosage in each case must be determined empirically. If a patient did not respond to a relatively high dose, increasing the dosage would not effect an improvement. Any toxicity was due entirely to the oestrogenic nature of these compounds and in no way associated with their molecular structure. Stilboestrol was possibly the most active of them oestrogenically, and therefore the most liable to cause toxic reactions. The nausea was comparable with the nausea of pregnancy which occurred when the female organ was suddenly flooded with oestrogen. The action of these substances might be on the anterior lobe of the pituitary, producing a castration effect; on the testes directly, inhibiting the secretion of testosterone; or in some unknown manner on the cancer process. Personally he doubted the first two hypotheses, and he was inclined to think that the substance acted directly on the cancer process. It was reported that in America there were on record patients who had improved greatly after castration, and had then gone downhill, but had afterwards responded to stilboestrol. If that was so it indicated that there was a possibility of production of androgens from the suprarenals.

Had stilboestrol any value in other forms of cancer? Its administration in carcinoma of the prostate was the result of careful laboratory work, not haphazard experiment, but among the results recorded in cancer of other sites the only definite outcome was that stilboestrol did appear to have a statistically significant effect on a small proportion of cases of carcinoma of the breast. The Radiology Section of the Royal Society of Medicine carried out an inquiry on this point two or three years ago, from which it appeared that something like 5% of these cases had benefited or had been affected in some way. The real point of the whole work was that for the first time a substance had been produced which, when administered by mouth, had an effect on one form of cancer.

Clinical Aspects of Oestrogen Therapy

Mr. TERENCE MILLIN reviewed 200 personal cases of cancer of the prostate. His conclusion was that oestrogen therapy as now administered would not cure prostatic carcinoma, but it would stave off the evil day. In about 90% of cases the primary growth dwindled and softened to such a degree that at a subsequent examination it was difficult to find. In discussing malignant cases it was out of the question to talk of cure under three years. There was no evidence in his experience that castration—meaning the sponging out of the parenchymatous tissue of the testes—was superior to oestrogen therapy. Where oestrogen failed, castration would very rarely help. The problem was whether to begin oestrogen therapy as soon as cancer of the prostate was diagnosed or suspected or to wait until urgent symptoms developed. Mr. Millin's discussion on this point led to the conclusion that orchidectomy should precede oestrogen if used at all, and the latter should be withheld until the benefits, if any, derived from castration had ceased. His usual dosage was 6 mg. of stilboestrol daily for three or four weeks, then 3 mg. as a maintenance dose. Acid phosphatase estimations he had not found of any great value. As to the toxic manifestations of oestrogen, oedema of the lower limbs could be very distressing; other disadvantages were nausea and loss of sex urge. One patient, aged 71, found oestrogen treatment distasteful from this last point of view and went to his local practitioner, who gave him testosterone, but the prompt return of his symptoms caused him to surrender his libido willingly!

Mr. E. W. RICHES agreed that an immediate good response was to be expected in 90% of prostatic cases treated with oestrogen. He had gone through the records of 20 cases in which oestrogen therapy was started between two and three years ago: 13 were still alive; 5 deaths were due to carcinoma, 1 to pneumonia, and 1 to cardiac failure. The period of survival varied from two years to two months (this last the pneumonia case). Of the 13 alive, one had lived for three years; he had had a massive recurrence after prostatectomy, and started oestrogen therapy nearly three years ago. He had now no clinical signs of the disease, his acid phosphatase remained normal, whereas it was originally raised, and he was perfectly well. Another survivor had had an endoscopic resection four and a half years ago and a course of *x*-ray treatment afterwards; he had been given stilboestrol for eighteen months now and remained well. Of the 20 patients 6 were treated with *x* rays as well as stilboestrol, and of these 6, 4 had died, 3 of them with metastases. Of the 7 patients who had died, 6 had metastases at the time of starting stilboestrol treatment; and of the 13 who were alive, only 4 had metastases. It appeared that the presence of metastases at the time of starting treatment was of vital importance in prognosis. Stilboestrol alone would not prevent the development of metastases. He had had two cases which started with no evidence of metastases, but developed it in the course of treatment, one of them after having been treated for seven months. One patient, bedridden and looking moribund, went back to his work and lived for two years after oestrogen treatment, eventually dying from metastases. In his view acid phosphatase was a valuable means of estimation. It might not always be raised in these cases, but if it was raised it was strong evidence that the patient had metastases. It was more reliable as an index of prognosis. If it went down and stayed down it showed that the patient was responding, and it gave a good indication of the right maintenance dose. If the drug began to fail, the phosphatase rose, and the rise was unaffected however much the drug was increased.

Mr. Riches deplored the indiscriminate giving of stilboestrol in prostatic cases. Many patients with benign prostatic affections were told to try stilboestrol, and this "queered the pitch" from a diagnostic point of view and masked a possible malignancy. The really hard carcinoma of the prostate was easily diagnosed, but in many early cases this was a most difficult diagnosis to make, and could be made certainly only by endoscopic resection and biopsy. If these patients were then taking stilboestrol the help given by the raised acid phosphatase was lost. For dosage he liked to start with 1 mg. three times a day and work up to 15 mg. a day, reducing it when the acid phosphatase came down. He agreed with Mr. Millin that masterly inactivity was a good policy in some early cases, but it was rather a difficult one when they knew that they had a drug which would exert so beneficial an effect in so large a proportion of cases.

Confusing Effects in Hormone Therapy

Dr. S. L. SIMPSON took the view that the oestrogen acted by producing a physiological castration and, more directly, by in some way inactivating the effect of the androgens. Recounting certain work on the endocrines generally and cancer, he admitted that it was confusing and sometimes conflicting, but as it had been shown with stilboestrol in carcinoma of the prostate that recurrences and relapses were still forthcoming, such adverse results with other hormones did not negative the possibility of their beneficial action under the right conditions. If endocrines in one set of circumstances appeared to produce neoplasms and in another set of circumstances caused them to regress and disappear, so did *x* rays and radium. Dr. WILLIAMS, as a laboratory worker, dissented from Prof. Dodds's view that the action of oestrogens was directly on the cancer process; in his opinion it was on the pituitary.

Mr. OGIER WARD referred to the work done on radio-activated elements and asked whether it would be possible to activate stilboestrol in such a way. It would then be possible to determine where the stilboestrol went in carcinoma of the prostate and whether it was distributed all over the body or concentrated in certain tissues. Mr. DICKSON WRIGHT asked whether the giving of stilboestrol early in carcinoma delayed dissemination to the skeleton. It seemed that such dissemination was the fatal part of the disease. He had tried stilboestrol in two cases of seminoma without any good result.

Prof. DODDS, replying to a question as to the relative value of intravenous and oral administration of stilboestrol, said that he could see no evidence why stilboestrol should not be given by mouth. There was ample evidence that it was absorbed completely and acted quickly. To carry out Mr. Ogier Ward's suggestion of radio-activating stilboestrol would involve a most formidable procedure, but, notwithstanding this, it was one of the important things which should be done.

LUPUS VULGARIS TREATED WITH CALCIFEROL

At two recent meetings of the Section of Dermatology of the Royal Society of Medicine Dr. G. B. DOWLING and Dr. E. W. PROSSER THOMAS demonstrated some cases of lupus vulgaris treated with near-toxic doses of calciferol. They started this treatment in 1943 at St. Thomas's Hospital. These cases were shown because of the startling response to the oral administration of calciferol. These workers now have records of 38 lupus patients who are being treated exclusively with calciferol or are under observation after cessation of treatment. A small number of these have been treated in the past with *x* rays, and in them it has not been possible to assess results. In the rest there has been demonstrable improvement in all, a marked regression in the majority, and in about a dozen cases a total disappearance of the lupus. One patient was treated in 1943 and early in 1944; treatment was stopped eighteen months ago and cure apparently has been complete. A report will appear in the December issue of the *Proceedings of the Royal Society of Medicine*, and a further account in a later issue.

The Chelsea Clinical Society held a successful reopening dinner at the South Kensington Hotel on Dec. 11. The President, Dr. Desmond MacManus, paid compliments to the secretaries and treasurer for managing to arrange such a reunion in these difficult times, and welcomed the large number of old members present. He paid tribute to the many who had died or fallen on active service since his installation as president in 1939. Referring to the present unsatisfactory and unknown status of medical practice he said that the Minister of Health should be called upon to "put the cards on the table." Sir Ernest Rock Carling then delivered an extremely interesting survey of Soviet medicine as a result of his experiences in Russia during the war.

Correspondence

Hospital Service Plan

SIR,—One of the many difficulties with which doctors, and in particular general practitioners, are faced from time to time is that of assessing a patient's capacity to pay for treatment by consultants and specialists. Should a patient be recommended for free hospital treatment, including the gratuitous service of the consultants and specialists who will render it?

Many patients themselves find difficulty in deciding whether they should seek to enter the general wards of a hospital or whether their financial position really enables them to follow the course they prefer and to obtain treatment under private or semi-private conditions, and sometimes they are not as helpful as they might be in indicating the true position. These difficulties would to a large extent be solved if the Hospital Service Plan, established some three years ago under the auspices of King Edward's Hospital Fund, were more widely known. Its object is to enable the public by insurance arrangements to make provision for hospital pay-ward and nursing-home expenses, including fees for medical, surgical, and other services incidental to in-patient treatment.

We believe that doctors in the London area could help themselves and their professional colleagues by making more widely known the provisions of this excellent plan. Literature is available from the offices at 10, Old Jewry, E.C.2 (Clerkenwell 7261-2), and any inquiry at that address will be welcome.—We are, etc.,

HUGH LETT,
W. RUSSELL BRAIN,
Medical Members, Council of Management,
The London Association for Hospital Services Limited.
10, Old Jewry, E.C.2.

The Proposed National Health Service

SIR,—Perhaps you will allow me to comment on Principle III, by far the most essential requirement in the excellent statement issued by the Negotiating Committee. "III. The citizen should be free to choose his or her family doctor, to choose, in addition, in consultation with his family doctor, the hospital at which he should be treated, and free to decide whether he avails himself of the public service or obtains independently the medical service he needs."

Mr. Willink, then Minister of Health, in his opening speech in the House (March 16, 1944) answering a direct question from myself, admitted that the power of directing the newly qualified doctor to the public service for an unspecified period of years was "with exceptions" reserved by the proposals of the White Paper. As you point out in your leader (*Journal*, Dec. 15, p. 851) the present Minister's prohibition of the sale of practices is obviously dictated by the Government's intention to "direct medical labour." Principle III, as it appears in the statement, has, I submit, the disadvantage of being ambiguous, more particularly as regards the "freedom" of obtaining medical attention independently of the State medical service. Unless it is made perfectly clear that the patient who wishes to choose his own doctor and pay for his services will not at the same time be obliged to contribute the compulsory levy exacted under the National Insurance Bill, the "freedom" which Principle III demands is illusory.

Repeated efforts have been made in Parliament (and have failed) to obtain some official estimate of the approximate amount which will be payable under the compulsory levy cited. The Minister's statement in the debate (March, 1944) revealed that the direct insurance contribution was only a quarter of the cost of the services to be provided; the remaining three-quarters was to be furnished in equal quotas from rates and taxes, respectively. The ultimate exaction has been computed by independent experts as reaching a total of something like 12s. to 16s. per week, progressively increasing with the lapse of years.

The effect of this economic compulsion was discerned and openly admitted by one of the clearest thinkers on the Socialist front bench; Mr. Pethick-Lawrence, as he then was, described the middle-class man as taking the position: "I do not want to send my children to the elementary school, but to a special school where they will get better education. I do not want to go to the panel doctor, but I will have a special doctor and pay his fees, because I think I will get better attention," and he rejoiced in the conviction that this will no longer be possible. He pointed out (*Hansard*, April 25, 1945) that the middle classes, which have hitherto "disdained the public services for themselves in health and for their children in health and education," will be compelled by economic pressure to abandon these practices, so uncomfortably hindering the achievement of a "one-class society," which is the goal of the doctrinaire Socialist. It is interesting in this connexion to note that that pillar of his party, the Foreign Secretary, has been wise enough to take his own doctor with him to Moscow!

Another consideration which, in my submission, still further nullifies the effect of Principle III as worded is the probability, if not the certainty, that the enforcement of a health service covering a 100% population must eventually force the independent doctor out of practice—a consummation explicitly foreseen by Sir William Beveridge, who must be accepted as the "onlie begetter" of the White Paper. I submit, Sir, that under these proposals the citizen, while ostensibly free to choose an independent doctor, will be unable to pay both the compulsory levy and private fees, and eventually there will be no independent doctor whom he can choose.—I am, etc.,

House of Commons. E. GRAHAM-LITTLE.

SIR,—With the bulk of the Dec. 15 leader most of us no doubt will be in agreement: on one point, however, many of us disagree. I suggest that a clear distinction be drawn between Ministerial direction of the young doctor to practise in a particular locality—to be fought with determination—and a prohibition from doing so on the grounds that the region is adequately supplied already, which I suggest is fair and reasonable. In normal peacetime conditions there were towns with more doctors than were really necessary, and to pretend otherwise is humbug. If, as seems probable, we are to stand up to a Government with the majority of the present one, let us be sure of our ground, bearing in mind that for a long time now we have had a "bad Press" except from the organs of the extreme Right.—I am, etc.,

Crowborough. ARTHUR G. WINTER.

"A Fundamental Principle"

SIR,—I do not wish to debate the other clauses in the pronouncement on "fundamental principles" which appears in the front page of the *Journal* of Dec. 15, and with parts of which I am in close agreement. Clause VI, however, cannot be allowed to pass without comment. It states: "Doctors should, like other workers, be free to choose the form, place, and type of work they prefer without Government or other direction."

I can see no other interpretation of this than that the Negotiating Committee desires that the oldest of our social services shall claim the right to perpetuate a state of affairs in which the under-privileged and under-doctored sections of the community must remain inadequately served. The present unfair distribution of medical skill and man-power is well known. It is the duty of the Government in the modern State to ensure that the people have, as nearly as possible, equal opportunities in matters relating to their health and the treatment of their sickness. There is no other answer to the problem of distribution than some measure of direction.

The medical profession can justly claim for its members that conditions of work and service should be the best possible, wherever and for whatever period they are appointed to serve, but (when the two do not coincide) the people's need must surely come before the doctor's wish.—I am, etc.,

Oxford. JOHN A. RYLE.

⁎⁎ With all respect to Prof. Ryle, we cannot agree that a solution to the problem is to be found by removing doctors from a place well supplied with them to a place not so well supplied. The remedy is to increase the number of doctors, and one way of doing this is to make medicine an attractive profession to follow.—ED., *B.M.J.*

Surgical Catgut

SIR,—There has been much correspondence about the defective qualities of British surgical catgut. There has been and there may be still catgut of British manufacture of poor quality, but this state of affairs also applies to surgical catgut produced in all other countries, including America. Some years ago Prof. Bulloch showed there was at least one catgut produced in this country which was above reproach as regards sterility and tensile strength. Dr. Clock of New York, from whom I have a personal communication, has shown from the most exhaustive researches that every country produces infected catgut as well as sterile catgut.

In fairness to the home product I for one would like to state that I have both, before and during the war, used "London Hospital" catgut to my and to the patients' entire satisfaction, and I consider that it compares very favourably with the best catgut produced by any American firm.—I am, etc.,

Hove, Sussex. G. W. BERESFORD.

SIR,—I have refrained so far from taking part in the controversy aroused by the letter from my old friend, Mr. John Hosford (Nov. 10, p. 668), because his criticisms of British surgical catgut dealt with variations in the tensile strength and gauge for which standards are not prescribed in the Therapeutic Substances Regulations which are administered by the Ministry of Health as licensing authority. However, in your issue of Dec. 1 (p. 784) Mr. H. J. McCurrich brings other charges against catgut manufactured by British firms, and these charges do concern the Regulations I have mentioned, and with which I have been intimately connected since 1928. I made a special study of the manufacture of surgical catgut preparatory to the addition of this substance to the Schedule to the Therapeutic Substances Act in 1930, and I have inspected its manufacture not only by all the licensees in this country but in many factories abroad who used to import their catgut here before the war. I am therefore in a position to contradict several statements made by Mr. McCurrich.

(1) He says that sterility varies tremendously. All batches of catgut are tested for sterility by, or on behalf of, the manufacturers before issue by duly qualified persons approved by this Ministry, and from time to time an independent "sweep" is made by us.

(2) He says he believes that the raw material for making catgut in this country is all imported. This is quite untrue. Probably the best "casings" in the world come from Scotland, and this country actually exports raw catgut abroad.

(3) He makes the general statement that "most of the chromicizing is unreliable." Though, as I have said, this quality is not standardized under the T.S.A., yet I have every reason to doubt this statement, and in any case I am surprised to hear that Mr. McCurrich is in a position to obtain data to support such a sweeping statement.

The other points have, I think, mostly been dealt with by your other correspondents, but in conclusion I would suggest that it is most deplorable that British surgeons should, on insufficient evidence, attack a British industry which I have found to be most progressive and co-operative and which I have every reason to believe has established a fine reputation in the world at large.—I am, etc.,

Ministry of Health, W.1. WELDON DALRYMPLE-CHAMPNEYS.

SIR,—Mr. J. Hosford's letter (Nov. 10, p. 668), by challenging the manufacturers of British catgut to turn out a uniform product, will do good to a point. It will stimulate them to work in accurate conformity with the American standards and sizes of catgut, which they have recently adopted. I have no doubt that before the market can be inundated by our Allies' sutures, our manufacturers will be offering us a ligature, smooth or rough, hard or soft, black or white, according to individual surgeons' wishes.

Mr. Hosford is right when he mentions the variability of catgut at present, but we have to remember that hospitals carry large stocks of catgut, and that it takes a long time for the new products in all sizes to appear at the operating table. Some sizes are consumed quicker than others, and therefore these will appear to be the same as other grades in the older batches. For instance, at one hospital they still have Davis and Geck's atraumatic needles; at others they have one maker's curved atraumatic and another manufacturer's straight atraumatic, and another maker's chromic and another firm's non-chromic. In the war years hospitals have had to take what was available. The feeling of exasperation caused is obvious. The makers have had to make do with short, inexperienced staffs and with material difficulties. It is necessary, therefore, before damning British catgut wholesale to look all round the situation. We must decline the temptation to develop an attitude of rejecting British catgut and demanding the American product as the only dependable catgut. In point of fact, the position is only a facet of the universal difficulties that the upheaval of the war has made.

Time, persistence, and encouragement will correct the situation. I am sure that the British genius for precision and production of a superlative product will show in our catgut as in other departments of our national industry.—I am, etc.,

London, W.1. HAROLD DODD.

Surgery in West Africa

SIR,—I read with great interest Mr. J. K. Willson-Pepper's impressions of surgery in West Africa (Dec. 8, p. 812), having myself served for two years as surgical specialist to a military hospital in Freetown during the war. I agree emphatically with his views on the unsatisfactory results which are obtained with the closed-plaster treatment of infected compound fractures in the Tropics, and also with his views on the healing of surgically inflicted wounds. With regard to the latter, however, the reluctance which has existed to do "clean cold operations" on Europeans in hot climates is very understandable, since infection, if it does occur, is generally fulminating in type. In the only case of my own in which this complication arose (a saphenous vein ligation) the infection responded rapidly to sulphonamide therapy; but had the case occurred in the pre-sulphonamide era the situation might have become extremely serious. I feel, in fact, that it is only since the introduction of these drugs that non-urgent surgery upon Europeans has become justifiable in the Tropics.

I do not agree with Mr. Willson-Pepper's condemnation of occlusive dressings for clean surgical wounds. I always used a small gauze dressing firmly sealed in place with "elastoplast." This did not, in my experience, lead to any "sogginess" from retained moisture, and was a valuable safeguard against post-operative contamination.

Finally, I do not think a surgeon proceeding to the Tropics can be too strongly warned of the possibility of encountering patients suffering from two major conditions at the same time. A case of retention of urine due to enlarged prostate in a merchant seaman who developed cerebral malaria, a case of acute appendicitis with fulminating pulmonary tuberculosis, and another patient with acute appendicitis who was found also to have an amoebic abscess of the liver were three striking examples of this state of affairs in my short experience of tropical surgery.—I am, etc.,

Winchester. CUTHBERT ROBERTS.

Treatment of Varicose Ulcers

SIR,—I read Dr. Brooks's letter (Dec. 8, p. 816) with some alarm. I cannot but think that his suggestions are retrogressive. I had the privilege of learning the treatment of varicose ulcers under Mr. Dickson Wright when the "elastoplast" technique was introduced. There are three fundamentals in the treatment of a varicose ulcer: first the injection of the sentinel vein; secondly, the removal of oedema: without this, healing cannot occur; thirdly, any pressure applied for this purpose must be graduated from the foot upwards. Healing need not take months; our average rate of healing was one square centimetre per week, and an ulcer of sixteen square centimetres is a very considerable ulcer. In many of the ulcers we had to deal with the bone was actually exposed in the ulcer floor.

As regards leaving the bandage on, I saw one woman with an extensive ulcer of about eighteen square centimetres and applied an elastic adhesive bandage. She was on a barge and I did not see her for six months. When she returned, admittedly the bandage, my original application, was sodden and offensive—very offensive—but when removed there was no sign of the ulcer. I think the treatment suggested by your correspondent must refer to very small ulcers. I would like to point out to anyone following his example that the use of sulphonamides as suggested is dangerous.

In conclusion, how many people can find the two hours required to elevate the limbs? I think the "elastoplast" technique is not yet to be replaced.—I am, etc.,

Eccleshall, Staffs. C. GLYNNE OWEN.

SIR,—After reading Dr. R. K. Brooks's interesting letter I cannot help feeling that too little credit has been given to the elastic adhesive bandage, and that the main physical elements in the treatment have been rather side-tracked in favour of the healing action of certain chemical substances. I tried to treat varicose ulcers considerably prior to the elastoplast era, making use of various local applications, supporting strapping, etc., with the poorest possible results, though it was clearly recognized that, if the patients had been able to rest in bed with the load taken off the saphena venous system, steady healing usually occurred, the nature of the dressing, so long as it was suitable for the surgical condition, not making much difference.

The cure of these ulcers is much facilitated by two main factors of vital importance—namely: (1) rest of the ulcerated surface by the most infrequent interference; (2) support of the saphena venous system either by rest in bed or by support from without by suitable bandaging. The practical application is as follows.

Rest in Bed.—Here the load is taken off the venous system, and if the ulcer is very large and foul this method may be a necessity. The nature of the dressing is not of primary importance. Eusol is suitable, especially if the ulcer is very foul; flavine may be substituted, and tulle gras, preferably made up with sulphathiazole 5%, has the advantage that the dressing need not be so frequently changed. The healing of the ulcer under the plaster case mentioned by Dr. Brooks is a good example of the working of this principle, together with non-interference and rest of the ulcerated surface, though, by inference, he appears to have been surprised at the result, if the remark in brackets, "taking a tremendous risk," is intended seriously.

Elastic Adhesive Bandages.—Both healing principles are in action in this method, which is the one of choice in the treatment of ulcers of moderate size and in those which have decreased to a manageable size by rest in bed. The most suitable cases are those in which the affected area has not become adherent to the tibial periosteum. The bandaging must, however, be very carefully carried out, and in the case of several apparent failures which have come under my notice there were obvious faults in technique. The ulcer and surrounding skin should first be cleaned up, not too severely, with soap and water, dried, swabbed with industrial alcohol followed by methylated ether. The ulcer is then covered completely with a single strip of the bandage of suitable width. This should extend well above the ulcer, and can be taken round the instep as a stirrup and a short distance up the other side of the leg. Absence of "rucking" and close adherence to the surface are vital, the object being to protect the ulcer from direct contact with the turns of bandage. The bandage is then applied from the roots of the toes upwards in firm even turns, the greatest care being taken to prevent any rucking, since this is liable to cause abrasions or sometimes even ulceration on its own account. As much as possible of the parts adjoining the heel should be covered, as can be done by the use of a simple figure-of-eight bandage, and the turns should be taken as high up the leg as possible—at any rate considerably above the upper limit of the ulcer. For a large leg a 3-inch bandage should be used; for a small one a 2½-inch should suffice. It is of importance that the bandage should be in good condition and easy to unwind during application. If it is old or has been kept in a warm place the coils become irregularly adherent so that the combined efforts of surgeon, patient, and any attendant may be necessary to assist in the unwinding, and this is pretty sure to result in adherent puckers and creases, and application with even pressure is impossible.

When the bandage is applied the patient can be encouraged to carry on his usual work; no rest with legs elevated during the day is really necessary, and there are no dressings to worry him. The first bandage can be kept on for a week. Even in cases where there has previously been free discharge this is usually so much reduced that very little, or even none at all, will have soaked through by the end of this period, and any pain which may have been present usually passes off, sometimes with dramatic suddenness. Even if the soiled part of the bandage becomes offensive—an occurrence which I have found very uncommon, though there may be a certain sourness—its removal should not be too hastily considered so long as the patient's health is good and pain not increasing. When the bandage is cut off it will usually be found that the ulcer is smaller, with a good broad pale-blue healing edge; the surrounding skin may be a little sodden with discharge, but this does not appear to do any harm. The ulcer and skin are cleaned and a second bandage applied which, under favourable circumstances, can be kept on for a fortnight or more, the process being repeated until the ulcer is healed. On an average three bandages suffice.

One of the criteria of success is the relief of pain, which, as stated above, may be rapid. If, however, the pain increases the bandage is best removed. Under these circumstances a trial may be made of a "viscopaste" bandage, but I have had little success with this either in such cases or where it was applied in the first instance.

In some cases, apart from the failures mentioned above, the patient may be intolerent or even fearful of "tight bandaging" of his leg, and if he cannot go to bed other methods become necessary. This is the domain of Dr. Brooks, and I look forward to the trial of some of the methods he has evolved. I have had the best results in such cases with sulphanilamide tulle, a good crêpe bandage, firmly applied with the patient's leg elevated, being an essential part of the treatment. The appropriate treatment of the veins has to be considered either after the healing of the ulcer or else as part of its management, but this is beyond the scope of this letter.—I am, etc.,

Rustington, Sussex. W. E. WALLER.

SIR,—The treatment of varicose ulcers has interested me for some time, since, as a student, I saw at the clinics old ladies' legs stuck up horizontally and every known antiseptic applied to them. I have recently been interested in a method that I got from Dr. Eastman Sheehan, who used it for old infected burns of the limbs. I coagulate the surface of the ulcer with silver nitrate pencil and then with a scalpel cut off the coagulated area. This, I believe, removes all the infection from the base of the ulcer, and on several occasions when I have swabbed the base after excision it has been sterile or almost so. I then apply a Thiersch graft from the medial aspect of the thigh, cut up into small pieces the size of postage stamps. This is covered by flavine wool and a crêpe bandage.

I have not yet done enough cases to write up a series, but the six or seven I have treated, which were of an extremely chronic nature, have all responded admirably and healed within a month.—I am, etc.,

Beverley Emergency Hospital, Yorks.
R. CROSBIE WALSH,
R.S.O., Orthopaedic Department.

Morphine as a Prophylactic for Ileus

SIR,—As one who has taken a close clinical interest in the action of morphine in this condition I think it necessary to make some reply to the letter of Prof. J. H. Burn (Dec. 8, p. 817). The statement made that "surely there is no justification for the use of morphine as a prophylactic against ileus" is not tenable either on the work of those he quotes or on clinical experience. The experimental work quoted mainly appeared after I wrote on the action of morphine in peritonitis (*Brit. J. Surg.*, 1932, **19**, 634), and what I knew of it spurred me to further observation. To me it was obvious that the findings when an intestine, divorced from sympathetic grip, came under morphine influence were quite different from those when that same grip was there. Intrinsically it is perhaps not different, but the clinical results differ in almost exactly the same degree as action of the ileus-ridden bowel differs from the unfettered action of a normal bowel. It is this situation that awaits laboratory verification. Once you have intrinsic and extrinsic influences interlinked in a single active syndrome the clinical results of various drugs appear to run contrary to expectation. It is surely less than half a truth to say that the action of a drug in one situation must be identically the same in a different one. My own belief in morphine, not as a specific but as an almost essential adjunct in the treatment of ileus, remains unshaken.—I am, etc.,

The Royal Infirmary, Dundee. JOHN J. ROBB.

Shock and Open Ether

SIR,—In Memorandum 9/1943 of the Department of Health for Scotland, Feb. 2, 1943, on "Anaesthesia for the Shocked Patient," we read: "The use of ether on an open mask and of Clover's apparatus is undesirable." This was the opinion of the Anaesthetics Subcommittee of the M.R.C. Committee on Traumatic Shock.

Some of us, possibly a minority, are of the opinion that open ether is the method of choice in these cases. Our view has been strengthened by the fact that open ether canot now be condemned as presenting to the patient a cold vapour for inhalation (*vide* "General Anaesthesia and the Temperature of Inhaled Gases," *Journal*, Nov. 10, p. 646). What, then, are its objectionable features? The toxicity of ether is stressed as one of these, but this is not peculiar to the open method of administration. This method, moreover, offers excellent facilities for that constant and accurate observation of the patient which is so essential if he is to receive the minimum dose of the toxin. The ocular reflexes afford an accurate guide to the depth of the anaesthesia. Close-fitting face-pieces with various types of harness, modified gas-masks, and many other contraptions now in use effectually deprive the administrator of these facilities. Their use may, indeed, cause a considerable disturbance of the intraocular tension. Drs. Ina and J. G. C. Brittain (March 31, p. 442) describe thirteen cases of unilateral hypotony following anaesthesia in a series of three hundred cases, the aetiological factor being the pressure exerted by the rim of a badly adjusted face-mask. The danger of causing harm to the cornea in eliciting this sensitive reflex is mentioned in every textbook. I have tested the sensitivity of the cornea and demonstrated the method of doing so many thousands of times and have not once heard of harm resulting therefrom. A light uniform open-ether anaesthesia with a sensitive cornea suffices for practically all operations on the extremities. When abdominal muscular relaxation is required the corneal reflex is lost and the size of the pupil then becomes a reliable guide. No form of premedication interferes with the paralytic dilatation of the pupil associated with a profound and dangerous depth of anaesthesia.

Open ether interferes less than any other method with the normal composition of the gases in the pulmonary alveoli. When indicated, extra oxygen and/or carbon dioxide, picking up a little ether vapour from an ether bottle, can be easily delivered into the mixture of air-and-ether vapour inhaled by the patient. The anaesthesia can be lightened or deepened easily and quickly and immediate advantage taken of periods free from surgical stimuli.

If nitrous oxide is administered with more than 20% oxygen it has no anaesthetic effect. Why use it as a vehicle for the ether vapour when the patient's condition is demanding more oxygen? If gas, oxygen, and ether vapour are being administered and the resulting anaesthesia is without cyanosis and yet deep enough to obtain abdominal relaxation, let the administrator shut off the gas and turn on the corresponding extra litres of oxygen. The anaesthesia does not become lighter.

The closed-circuit method leads to a definite change in the composition of the alveolar gases, and we do not know that this is free from harm. I am quite willing to breathe for an hour through a mask such as is used for open ether. Would the advocate of the closed-circuit method as readily submit himself to a similar experiment? So far as I know this has never been done, but the experience might be of some value. The surgeon appreciates the reduction in amplitude of the respiratory excursions when the closed circuit is used. Shock, however, is associated with a falling-off of the venous return to the right side of the heart, and an efficient venous return is dependent upon the movements of respiration.

The Anaesthetics Subcommittee had no easy task in formulating their recommendations regarding anaesthesia for the shocked patient. One agrees with them that "almost equally good results are obtained by experts using widely different agents and methods," but I am not alone in regretting their condemnation of open ether. As for chloroform, the majority in Scotland at least would definitely not agree with the committee's opinion that "in the hands of an expert chloroform may be satisfactory."—I am, etc.,

Dundee. ARTHUR MILLS.

Spinal Analgesia in Operative Obstetrics

SIR,—Dr. Louis Resnick's article (Nov. 24, p. 722) prompts me to add a little of our experience at University College Hospital.

A very small series of Caesarean sections has been carried out under epidural or extradural analgesia in selected cases. This method produces operative conditions similar to those given by a spinal, with less risk to mother and child, but it is undoubtedly more time-consuming and requires a careful technique. The solution used is 40 to 45 c.cm. of 1 in 600 nupercaine in half-normal saline, and this is slowly injected between L 2 and L 3 into the epidural space, with rigid adherence to all technical precautions. It takes 20 minutes to produce analgesia to D 10. Many patients showed no fall in B.P., and in those who did it was readily controlled by ephedrine 1/2 gr. I.V. and 1/2 gr. I.M., since the fall is not as rapid or precipitous as with a spinal.

There are fewer unpleasant post-operative sequelae with epidural analgesia as compared with spinals; in fact we have had none except vomiting, which has been almost negligible. The main advantages of epidural analgesia over spinal are: (1) Fall in B.P. is not so great or so sudden, and in some patients no drop occurs. (2) No loss of motor power occurs, so that the patients can immediately move about in bed. There is no intercostal paralysis. (3) Prolonged freedom from pain post-operatively, lasting up to 12 hours, diminishes the amount of drugs required. (4) The subarachnoid space is not entered, thereby excluding the liability to headache and damage to the cord. Since the epidural space ends at the foramen magnum the higher centres cannot be reached by the analgesic solution.

However, our experience has indicated that patients with extreme hyper- or hypo-tension and acute cardiac disease did in some instances show rather severe falls in B.P., and though these always proved controllable we feel it is taking too great a risk in such cases to employ this form of analgesia. It has, however, proved ideal in other conditions where general anaesthesia is contraindicated.

A paper describing this method in detail is to be published in the January number of the *British Journal of Anaesthetics*.—I am, etc.,

University College Hospital, W.C.1. DOREEN M. E. CRANCH.

SIR,—While spinal analgesia in obstetrics has some theoretical disadvantages expressed by some of your correspondents, its use in fact leads one to think that the dangers have been exaggerated. There are, on the other hand, some definite practical advantages of the method.

I have now used a low spinal analgesic in 50 cases of vaginal manipulation, chiefly for forceps delivery. The solution used is "planocaine" 0.75 g. accompanied by ephedrine 0.05 g. Seat analgesia only is the aim, and the patient can often assist to put her feet in the lithotomy straps. In two cases, both of highly excitable women, the analgesia (or rather sedation) was not sufficient and was supplemented by gas-and-oxygen and by a few drops of chloroform respectively. In one case only the woman complained of a headache badly enough to have it reported to me. In one there was transient paresis of the left external rectus muscle attributed to the analgesic. Otherwise the series has been without incident so far as the analgesic was concerned. In no case has the post-partum loss exceeded 20 oz.

Many women have expressed their appreciation of being, so to speak, present at the birth of their children. It seems an important point not to deprive a woman of her due physiological experience more than is necessary for her comfort. There are several small technical advantages to the operator; for instance, the question of whether to repair the perineum before delivering the placenta for the sake of not prolonging the anaesthetic does not arise. Also the nursing staff appear to appreciate the speed and lack of fuss of the proceeding. The greatest disadvantage of the method seems to be its unsuitability for domiciliary midwifery.

I should like to express my thanks to Dr. Resnick for giving a lead in this interesting and, I am sure, valuable procedure.—I am, etc.,

Hertford. B. J. CLYMO.

Sulphonamide Therapy by the Midwife

SIR,—I believe it is becoming a common practice when suturing a perineum to apply sulphanilamide powder. To omit to do so is to leave room for self-reproach in the odd case which becomes complicated by sepsis, so that I, for one, always use it. I find that if I apply the powder immediately before the operation the field tends to be obscured, while to apply it after the operation savours of black magic. Being unable to answer immediately a recent call to a torn perineum, I sent some powder for the midwife to apply, and when I came to do the repair an hour later I found that the interval was a great advantage. This leads me to the view that it would be a good idea for the midwife to carry the powder and to apply it as soon as labour is ended, so that an interval between its application and the repair operation could be assured. I had thought of suggesting this to the local authority here, but I read that the Central Midwives Board has circularized local supervising authorities to the effect that it considers that drugs of the sulphonamide group should not be administered by a midwife except on specific instructions of a medical practitioner.

It would be interesting to hear the views of others on this question. Is my suggestion a sound one? Would this use of sulphanilamide be "administering" within the meaning of the C.M.B.'s present ruling? A C.M.B. ruling to ensure that midwives did not believe the powder could replace suturing would, of course, be necessary.—I am, etc.,

West Bromwich. D. SAKLATVALA.

The Flour in the Bread

SIR,—In the article "Whose Loaf?" (Dec. 15, p. 853) you advocate the use of bread made from flour in which natural products are retained in the process of milling; and you seek to reinforce your argument by telling us that "for approximately 6,000 years man's taste was not offended by the whole wheat grain." This is undoubtedly true, but it certainly does not follow that man's taste is not offended by the very different bread we get now. Man's tastes change, although, admittedly, they can revert to their earlier state; but I, for one, should mourn the passing of the croissants and brioches so admirably prepared by the French, whose state of nutrition in the days of peace was, I imagine, at least as good as that of the inhabitants of the Nile Valley.

If we as doctors are to be consistent in our demand for freedom we must at least give to our patients, who are the general public, the right to choose whether to have brown bread, white bread, or the present dun-coloured product. Force, whether physical or legislative, is not one of the weapons of medicine. —I am, etc.,

London, W.1. A. PINEY.

⁂ We advocated not force but propaganda, a word with several shades of meaning but in this instance implying education. The public is, after all, protected by legislation against the adulteration of food, and we hope it will in time be protected against infected milk, however much it might prefer to have the milk straight from the cow.—ED., *B.M.J.*

The Westergren E.S.R. Technique

SIR,—The letter of Drs. D. G. McIntosh and D. M. Keay (Oct. 27, p. 584) had the superficial appearance of being very comprehensive; it is rather reminiscent of the letters to which it refers—those that were in the *Journal* following Della Vida's article in 1942—and like those letters it touches on too many factors not fully enough. They quote experiments performed in Westergren type tubes, comparing the one-hour reading obtained with the same blood diluted with 1/5 its volume of 3.8% sodium citrate and with Paul and Heller's oxalate mixture. If curves are constructed by plotting five-minute readings of the falling cells it will be seen that the citrated blood usually starts sedimenting before the oxalated sample; then the oxalated blood overtakes and passes the citrated, only to be passed by the citrated blood when packing of the cells sets in. The one-hour reading can occur in any part of these curves, thus explaining their variable results.

Dr. James Kelman (Dec. 8, p. 823) suggests that so long as one method of E.S.R. test is used the results are comparable; while I am thankful to read his balanced letter I must disagree with that statement. He misses the point of Drs. McIntosh and Keay's letter, which damns all E.S.R. determinations for failing to show up early signs of activity in tuberculous subjects. Workers like Dr. V. Cotton-Cornwall (Nov. 24, p. 742) will find that the Westergren readings of 10, and just below, will be missing cases with active tuberculous processes; some of these readings are bound to be occurring in slightly active but plethoric cases, and the Westergren technique, making no allowance for plethora, misses slight (but definite) increases in rate in these cases. Later, someone may again condemn the sedimentation test generally, because Dr. Cotton-Cornwall's Westergren technique fails to show these cases, which can otherwise be proved to be active; the Westergren technique has no definable normal limits.

The E.S.R. test is one that the pathologists will continue to be asked to perform. I consider that the technique employed must be one that eliminates the effects of temperature and other controllable physical factors, and be one that is not too time-consuming. My mathematically minded friends assure me that the Rourke and Ernstene type of test is the best method in which the whole blood is employed, but neither I nor any of my small staff can afford the time necessary to take five-minute readings. I employ the Wintrobe technique, correcting by Whitby and Hyne's graph, and I use a standard temperature of 20° C. obtained by employing the holders that Messrs. Willen Bros. are making for me. If one does not correct out the varying corpuscular volume this test measures both the degree of tissue destruction and the corpuscular volume, and there is no way to sort out the effect of one factor from the other. It is rather like saying, "I have two coins," in answer to the question, "How much money have you?"; whereas a simple examination of the coins will give a more exact answer to the question. I have read three of Mr. R. B. Whittington's papers, and while I admire his work I find that it is not applicable in an understaffed laboratory, and I cannot foresee his technique being employed widely outside very large centres. I have not read the latest of his papers, to which he makes reference (Nov. 24, p. 741), but perhaps he has made the technique easier to use.

When I examined the references given in Drs. McIntosh and Keay's letter I was left with the impression that the authors had not recently referred to the papers they quoted. Many of the authors do not give the method they employed in carrying out the E.S.R.; and I am grateful to those authors from whom, on inquiry, I have now learnt the method they used. The summary shows that Young; Edwards *et al.*; Clive; Kahan and Close; Robinson; Abeles and Pinner, and Hilliard all employed the Westergren or a Westergren type of test; Obermer employs even stranger methods, as he thinks a tube in his waistcoat pocket will stay vertical and that it will be at a uniform temperature of 37° C. I have not traced Braeuning's paper; reference to four of Stiehm's articles gives no indication of the E.S.R. method he employs, and unfortunately Dr. Kayne is dead, so I cannot trace the technique he employed. The high percentage of incorrect reference in McIntosh and Keay's letter may be a reflection of the value to be placed on it. Their correction came too late to save my time and that of the librarians at the R.S.M., who helped me to find the correct journals. If their references can be so carelessly collected, then their technique may be equally careless.

Thus we find that the scathing remarks of Drs. McIntosh and Keay are really condemning the Westergren technique. This has served the useful purpose of popularizing the test, which is now proved to be outmoded and needs replacement by a more refined method, and I would suggest the Wintrobe technique.—I am, etc.,

B. ROGERS,
Shotley Bridge, Durham. Area Laboratory Pathologist.

The E.S.R.: "Fourteen Points"

SIR,—The crucial sentence in the letter of Drs. D. G. McIntosh and D. M. Keay (Oct. 27, p. 584) would seem to be: "Dunlop and Dick, using a 200-mm. Westergren tube . . . regard as abnormal any reading greater than 5 mm. for the one-hour reading." A year ago, being somewhat confused as to the method of B.S.R. (why not call it "blood" instead of "erythrocyte"?) estimation, I called personally at a well-known London hospital and also at a big provincial one. Both laboratories seemed slightly vague as to their methods and differed a good deal, but I learned something from each. I heard one distinguished physician state positively that the correct method was to take up to 200 mm. of blood-citrate and estimate the fall from that height, while his house-physician insisted that 100 mm. was the right amount, and a laboratory assistant who was called in did not appear to agree with either. It is obvious that the higher the column of blood the greater will be the amount of clear serum to be read off. If you take a column 100 yards high the normal fall will be about 4 yards, whereas if 100 mm. be taken it will be 4 mm. If

Dunlop and Dick used 200 mm. and found that up to 5 mm. was normal, then if they had taken 100 mm. they would have found that up to 2½ mm. was normal. The procedure should be strictly standardized and fixed for the benefit of both the G.P. and consultant, so that each, all over the country, should know exactly what the other means.

The glass B.S.R. tubes supplied by instrument makers are usually graduated in millimetres up to 200, the upper 100 of which are redundant and not wanted. A set of three of these tubes can be obtained from Messrs. Down Bros. mounted upright on a stand, each tube being firmly clipped at the top by a metal clip and resting as to the lower end on a depression hollowed in a rubber cork. The background of the wooden stand is white to facilitate visibility. A fine white line should be painted with oil paint round the tube at the level of the 100-mm. mark. Having got so far may I suggest to the busy, and probably tired, G.P. who is inquisitive about, for instance, an early case of Tb., acute rheumatism, or rheumatoid arthritis, that the following procedure, though lengthy in description, may be carried out with a minimum of expenditure of energy and, excluding the hour allotted later to sedimentation, in under five minutes.

1. Draw up 1 c.cm. of 3.8% solution of sodium citrate into his eccentric-nozzled intravenous syringe (or 1/2 c.cm. if he is going to use only 2 c.cm. of blood), and squirt it into the small glass phial supplied by the B.S.R.-set makers with the tubes.
2. Twist something elastic, such as a stomach-pump tube or an old piece of cycle inner tube, round the patient's arm above the elbow, give it a couple of turns, and get the patient to hold the knot thus formed with his other hand.
3. Ask the patient to bend and stretch the arm and fingers to engorge the median basilic (or median cubital, as it is now called) vein.
4. Clean up the vein with ether or spirit, insert the needle, which need not be as big as an intravenous needle, into the vein and withdraw 4 c.cm. (or 2 c.cm. if only 1/2 c.cm. of sodium citrate is being used) of blood.
5. Tell the patient to let go the knot, and swab the puncture with ether-soaked wool after withdrawing the needle.
6. Expel the blood into the phial containing the sodium citrate.
7. You now have your citrated blood safe in your car or at home, but the estimation must be done within 2 hours; if not, some pathologists say that the reading is not accurate. Method:
8. Wet the top of the hollowed rubber cork on which the tube is to stand. If this is not done the blood will run out of the tube at the bottom.
9. Suck up the blood-citrate mixture somewhere above the white line on the tube.
10. Wet a finger of the left hand and set the tube upright on it, thus firmly sealing the bottom end.
11. Wet a finger of the right hand and seal the top end of the tube. If these wettings are not done the blood will run out and you will have to start all over again, as the cut ends of the glass tubes as sold are often jagged and inclined to let in air.
12. Holding the tube upright slightly slacken the apposition of the fingers at both ends to allow gradual air entry and twist the tube with a rotary motion, allowing blood to escape over the lower finger till the column is about 1 mm. above the white line. The top finger being once more firmly applied, the removal of the bottom one means that gravity takes care of the remaining 1 mm. and brings the blood level with the white line. The usual directions to "hold up the tube with the right hand only and release the top finger till the blood reaches the required level" resulted in the blood shooting down to far below the white line, so that I had to start again.
13. Place the tube in the rack, firmly pressing the lower end on to the cavity in the wet cork and clipping the top with the metal clip provided.
14. Note the time, and read off the serum level in exactly one hour, or get someone else to do it and write it down.—I am, etc.,

Stowmarket. H. S. Gaskell.

Stethoscope versus X Rays

Sir,—If there has to be a choice between the stethoscope and *x* rays the latter will always be chosen as giving the greater percentage of definite results in chest diseases. The relative value of each instrument is always discussed in relation to pulmonary tuberculosis, because we know now that there are many cases of this disease which have neither symptoms nor signs for a great part of their course. This does not necessarily mean, however, that the stethoscope is obsolete and that examination with this instrument is only a gesture. Pulmonary tuberculosis is still a formidable disease, and in dealing with it every aid is required. We should not voluntarily discard something which, in some cases, gives us more information than *x* rays. Reliance on radiological appearances alone does lead to cases of pulmonary tuberculosis being regarded as quiescent, when stethoscopic and sputum examinations show such a view to be erroneous, and early breaking down of a lesion can often be heard before radiological signs appear, unless tomograms are resorted to. Used with a knowledge of its limitations the stethoscope can be a valuable aid and is easier to carry than an *x*-ray machine.—I am, etc.,

Penmaenmawr. R. Grenville-Mathers.

Radiology and Pyloric Stenosis

Sir,—With approaching 25 years' radiological experience I have seen many cases of juvenile hypertrophic stenosis. Oesophageal spasm in adults is sufficiently common that, when oesophageal cases are referred to me as a matter of routine, I ask that the patient be put under the influence of atropine or belladonna before he attends for examination, to eliminate spastic cases. The following case, recently examined, of a pyloric spasm which for some hours caused practically complete pyloric stenosis is, however, new to me and may be of general interest, besides proving the necessity for systematic timed serial films.

The patient, aged 56 years, had no abdominal history generally, but in 1940 and 1941 had single attacks of oesophageal spasm and inability to swallow, in each case rapidly cured by medicine (apparently an antispasmodic). There was no other abdominal history until seven weeks before my examination, when there were several attacks of vomiting, retching, no pain even of mild type, but slight jaundice. She was referred to me as most probably a case of carcinoma of the stomach.

On giving the meal, which was taken without undue difficulty, there was practically complete pyloric stenosis as commonly found with pyloric ulcer of long standing or carcinoma of perhaps short history. There was no tenderness to palpation. According to routine, however, and fortunately, the meal was followed through, and at one and at two hours after the meal examinations still showed practically complete stenosis. At four hours after the meal it had commenced to pass into the colon, but was still much delayed. At six hours after the meal the stomach and duodenum had practically emptied in normal time. Had the examination been terminated at any time up to two hours after the meal the diagnosis would have been complete pyloric stenosis, with preference, by the palpation characteristics, short history, etc., to neoplasm rather than benign ulcer as the cause. Had the examination been so curtailed operation would probably have been performed with a negative finding.

I have never experienced a similar case, though as a routine the patient is always examined at 6 and usually 24 hours. Probably this routine procedure is the reason why I have never had my report of complete stenosis questioned after operation, though the "probability" diagnosis between benign and neoplastic cause has been found defective.—I am, etc.,

Forest Gate, E.7. Bernard Leggett.

Surface-marking the Lower Border of the Liver

Sir,—I was very much surprised to learn that the following method has been in general use in Poland and among the Russians for many years without, apparently, finding a place in the clinical teaching at home. Its very great precision and ease and lack of dubiety would certainly seem to recommend it for such a place. It is an auscultatory method, and for those to whom it is new, like myself, it is as follows.

The chest-piece of the stethoscope is placed on the epigastrium over the left lobe of the liver, high up in the intercostal angle. The tip of the left index finger is now, from any point on the right costal margin, brought down vertically over the abdominal wall with a light stroking movement of the skin. While the finger is being applied over the organ a loud rubbing noise is very clearly heard. Once the edge is reached the very abrupt and deathly silence leaves no doubt in the matter. Repetition from different points along the costal margin downwards will pin-point the lower border to within a few millimetres.

To one who very often tends to be "baffled" by a soft and flabby organ and a thick layer of adipose tissue the ease and accuracy of the method come as a revelation and a relief. My thanks are due to Dr. Szyfman, of Lodz, at present working in P.W.X. hospitals in Germany, who introduced it to me.—I am, etc.,

B.A.O.R.
R. P. GILLESPIE,
Capt., R.A.M.C.

National Research into Tuberculosis

SIR,—I want to endorse the appeal by Dr. George Luntz (Dec. 1, p. 781) for national research into tuberculosis. This is to-day urgently needed, with special reference to prevention and control as soon as infection by the tubercle bacillus is found to have occurred. To make a real fresh start in any national effort to control tuberculosis the Ministry of Health should at once make it a penal offence for anyone to sell or give away to any person for human consumption milk containing living germs of tuberculosis. This step would prevent cases of surgical tuberculosis of bovine origin. By this one step the Ministry would save many thousands of children from suffering from very often permanent deformity, with ill-health and pain, and, in many cases, ending in death.

In 1943 there were probably some 1,200 deaths due to bovine infection. In the same year some 14,000 new cases of non-pulmonary tuberculosis were notified, and it is also probable that of that number some 4,000 were due to bovine infection. The Ministry should ask the Medical Research Council at once to determine to what the natural resistance to infection by the tubercle bacillus is due, and how this resistance can be built up in those individuals who lack it and so solve this problem of immunity as regards tuberculosis. Work has been carried out by the Americans on the liability to infection, and in the *Journal* there is that statement that children at Papworth are growing up free from clinical tuberculosis even where the danger of massive infection is potentially present. As it was stated in the *Lancet* of Oct. 20 (p. 498), "Our knowledge of pulmonary tuberculosis is fragmentary."—I am, etc.,

Horsham. SYDNEY GORDON TIPPETT.

Temperature and Descent of the Testis

SIR,—Dr. W. N. Leak, in his comments (Nov. 17, p. 704) on my article on descent of the testis in relation to temperature raises the question of method of descent. This I had not considered.

Up to the last fifteen years most observers supported the view that the process of migration was due to a combination of two factors—increased intra-abdominal pressure consequent upon the enclosure of the intestines in the abdomen and traction by the gubernaculum. The attachment of the testicle to the scrotal wall in the newborn infant is very slight (Hunter, R. H.., *Brit. J. Surg.*, 1927, **14**, 125), and even if it were firmly attached the scrotum would surely be pulled up to the testicle rather than the latter down to it, if contraction occurred.

Halban, J. (*Z. Geburtsh. Gynäk.*, 1904, **53**, 191) described the swelling and turgidity of the scrotum and labia which occurs in newborn infants, and attributed this to a then hypothetical secretion of the placenta. The arguments were convincing, but the active principles involved were not made clear until the female sex hormones were demonstrated in the blood and placenta of pregnant women by Frank, R. I., and Golderberger, M. A. (*Amer. J. Obstet. Gynec.*, 1926, **12**, 585), and the presence of an anterior-lobe-like substance was demonstrated by Aschheim, S., and Zondek, B. (*Klin. Wschr.*, 1928, **7**, 1404). Barry, D. T. (*J. Anat. Lond.*, 1910, **44**, 137) observed that the rete testis in embryos had a better relative blood supply than the rest of the testis. He also noted that its size and vascularity were increased in animals which mature quickly, such as ruminants, when compared with the more slowly developing colt.

Schapiro, B. (*Dtsch. med. Wschr.*, 1930, **56**, 1605), reported that scrotal migration had occurred in a number of cases of undescended testis treated with gonadotrophic extract of pregnancy urine, and since then a large number of authors have contributed series of successful cases. Engle, E. T. (*Endocrinology*, 1932, **16**, 506) published the results of experiments on the macacus monkey in which the testis passes through the internal abdominal ring at birth, but does not pass from the inguinal canal to the scrotum until puberty. He fed the monkeys with extracts of anterior pituitary gland and the water-soluble factor of pregnancy urine over a period of three to four weeks. After 10 to 14 days the testis increased in size and mobility, and the scrotum became turgid and larger. The scrotal changes were only slight after the pituitary extract, but were quite marked after the extract from the urine. In 8 out of 10 monkeys complete descent occurred, and at the end of the experiment each testis had doubled its weight. In a castrated monkey fed on extract of urine no changes occurred in the scrotum.

Burrow, H. (*Brit. J. Surg.*, 1933, **21**, 507), in the course of an experiment to estimate the carcinogenic factor of oestrin, noted that a large percentage of mice which had been painted with it developed scrotal herniae, apparently due to a relaxation of the inguinal muscles.

The sequence of events in the descent of the testis would therefore appear to be as follows. At the seventh month of pregnancy, oestrogenic hormones are present in large amount in the blood of the mother and probably also in that of the foetus. A relaxation, due to these hormones, occurs at the internal abdominal ring and the testis passes from the abdomen into the inguinal canal. The latter has already been formed by the gubernaculum, activity in which appears to begin about the third month. It may be that intra-abdominal pressure plays some part in the outward migration of the testis. The continuing action of the female hormones stimulates the interstitial cells of the testis, especially at the rete, and the organ increases in size. The internal secretion of the testis acts on the scrotum, causing it to become turgid and larger. Possibly as the result of muscular action of the inguinal canal, whereby a milking effect is produced on the ovoid testicular body, it passes along the canal, and shortly before birth reaches the scrotum.

The descent, therefore, is almost entirely due to hormonal influence. The role of the gubernaculum is passive, although it has played the important part of a pathfinder.—I am, etc.,

London, W.1. A. W. BADENOCH.

The "Stamping" of the Guards

SIR,—The correspondence in your columns on this subject began with a letter from Mr. Ian D. Kitchin (July 14, p. 64) on march fractures. He is mainly concerned with treatment, and we are not told whether any of his cases came from the Brigade of Guards. Is there any evidence that this condition is commoner in guardsmen, who are taught to bring their feet down smartly, than in other soldiers, who are not so taught? Deliberate "stamping," incidentally, was officially abolished years ago. I spent two years as R.M.O. to two battalions of the Grenadier Guards, and a further two years in two field ambulances which received the sick and injured from brigades including Guards and infantry of the line. I saw a few cases of march fracture in all regiments, and noted no connexion with drill parades. They were inclined to follow periods of intensive training. It would be interesting to know the incidence of this condition in Guards' and other battalions; such a comparison could be made from information in the possession of A.D.sM.S. of divisions including a Guards brigade. Even assuming that some such cases were precipitated by "stamping," I would agree with Major E. Grey Turner that the moral effect of the superb drill of the Guards on ceremonial occasions warrants a training involving a small amount of risk. I have seen the morale of whole towns in France, North Africa, and Italy enormously improved after witnessing such a parade. Their drill was one of the highlights of the military tattoo at Trieste last September. Would Dr. J. W. Perrott stop soldiers boxing or playing football? Far more casualties are caused by such sports. What about battle-training? Justified when training for war, of course. The ceremonial drill of the Guards has its place in peace as well as in war.

The functions of an R.M.O. include the advising of the commanding officer on matters relating to the health and morale of the battalion. I have found commanding officers and brigadiers of the Brigade of Guards very much alive to medical matters, and my advice has always been considered. "Pedes Plani Dolentesque" (Sept. 8, p. 333) has found that our advice cannot always be taken. I do not see that suggestions of ineptitude or weakness of R.M.O.s are well founded.—I am, etc.,

Wimbledon.

⁂ This correspondence is now closed.—ED., *B.M.J.*

Obituary

SIR E. FARQUHAR BUZZARD, Bt., K.C.V.O., LL.D., D.M., F.R.C.P.

Sir Farquhar Buzzard, who died on Dec. 17, was born in London on Dec. 20, 1871, the son of Thomas Buzzard, consulting physician to the National Hospital, Queen Square. Thomas Buzzard's distinction in neurology probably influenced the choice of a career by his eldest son. The other two sons, Sir Farquhar's brothers, made the Army their profession, again following their father, who had served in the Crimean War, being attached to the Turkish headquarters, and had been present at the siege of Sevastopol.

[Lafayette, Ltd.

As a boy of 14 Edward Farquhar Buzzard entered Charterhouse School, where he was science exhibitioner, and remained there for five years, leaving in 1890 for Oxford (Magdalen), the university to which he was to return thirty years later as regius professor. After four years at Oxford he took his clinical training at St. Thomas's Hospital, and qualified in 1898. In the following year he became M.R.C.P., and in 1902 proceeded D.M. Oxon. Shortly afterwards he became assistant physician to the Royal Free Hospital, an appointment which was followed by that of full physician and lecturer in medical pathology. He was also for eleven years assistant physician to the Belgrave Hospital for Children. In 1905 his association with his father's old hospital at Queen Square began with his appointment as out-patient physician, a post he held until 1922. In 1906 he was elected F.R.C.P., and in 1910 he was appointed to the visiting staff of St. Thomas's, and there remained until he retired at the age of 60, when he became consulting physician. In 1910 also he became consulting physician to the Queen Alexandra Military Hospital, Millbank, and the Royal Hospital for Incurables. By this time he had become widely known as a leading neurologist and had a large consulting practice in Harley Street. During the war of 1914–18 he was consultant to the London Command, with the rank of colonel, A.M.S.

In 1928 he succeeded Sir Archibald Garrod as Regius Professor of Medicine at the University of Oxford. During his tenure of the chair he became, in 1936, President of the British Medical Association. This was the fourth occasion in the rather more than one hundred years of the Association's existence that it had had as its president the regius professor. His address in the Sheldonian Theatre on the occasion of the Oxford Meeting of the Association will be long remembered, not only for its eloquence and its forward look, but for its sequel. One of his auditors was Lord Nuffield, who shortly afterwards, in order to give reality to what Sir Farquhar could only sketch as a dream, announced a benefaction of about one and a quarter million pounds for the establishment of a medical research school at Oxford. In the organization of this endownment Sir Farquhar Buzzard took a leading part, and although he had reached the age limit for regius professors, his term was extended until the age of 71 on account of his intimate concern with the detailed working out of Lord Nuffield's plans and intentions. He also became closely identified with the Nuffield Trust, set up to promote regionalization among provincial hospitals, and he was chairman of its Medical Advisory Council. He was also honorary physician to the Radcliffe Infirmary, and took a conspicuous part in the hospital as well as the academic affairs of Oxford.

During his term as President of the B.M.A. and before and after it he interested himself actively in Association matters, and the Association benefited greatly from his experience and wisdom and from his willingness to address meetings in many parts of the country, expounding policies which the Association desired to further. Especially noteworthy was his evidence, given in a personal capacity, before the select committee of the House of Lords on the Bill for the registration of osteopaths, a measure which he regarded as a menace to the prestige of medicine. His cogent and uncompromising testimony against the practice of the unqualified osteopath occupied, with the cross-examination, the greater part of two days. The promoters of the measure saw in him one of their most formidable opponents.

He was for long closely associated with the Royal College of Physicians. In 1906 he was Goulstonian Lecturer, taking as his subject acute infective and toxic conditions of the nervous system. As one of the Censors he took a prominent part in the Harvey Tercentenary Celebrations at the College, and he was the Harveian Orator for the year 1941. From 1932 to 1937 he was one of the Physicians-in-Ordinary to the King, becoming, at the beginning of the reign of George VI, a Physician-Extraordinary. He represented for many years on the General Medical Council the Medical Faculty of the University of Oxford.

Sir Farquhar Buzzard was able to unite with deep learning in his own subject the gift of clear exposition, which made him an excellent teacher. He could employ also the graceful speech demanded of public occasions. A noteworthy example was his delivery of the eleventh Earl Grey Memorial Lecture at Newcastle-upon-Tyne in 1939, when he spoke on neurology and its outlook and managed in the compass of an hour to embrace the history of neurology from the time of the Greeks down to Hughlings Jackson, Horsley, and Sherrington.

His own literary output was considerable, but was mostly in the form of contributions to textbooks. One work, in which he collaborated with Dr. J. G. Greenfield, was *The Pathology of the Nervous System*. He edited, with prefaces, Athanassio-Benisty's *Clinical Forms of Nerve Lesions* and *Treatment and Repair of Nerve Lesions*, which were published in the form of military medical manuals in 1918; also in like manner Babinski and Froment's *Hysteria or Pithiatism*. He wrote the section on diseases of the nervous system in Burney Yeo's *Manual of Medical Treatment*, and the similar articles in Allbutt's *System of Medicine*, Osler's *Modern Medicine*, French's *Index of Differential Diagnosis*, Latham and English's *System of Treatment*, and the *Encyclopaedia Medica*. He also contributed much to the medical journals.

Many honours came his way. He was made a Knight of the Victorian Order in 1927, and a Baronet in 1929. He held the honorary degrees of LL.D. of Belfast and of Manitoba. In 1940 he was awarded the Osler Memorial Medal as one outstandingly inheriting the Osler tradition.

In his early days he excelled at sports. In the mid-'nineties he was a member of the Oxford University Association Football XI and of the Old Carthusian XI, winners of the Amateur Cup in 1894 and 1897, and of the London Senior Cup for three years running. Some of his own mishaps on the football field, with ensuing temporary amnesia, furnished him with personal illustrations for his neurological lectures. In later life, at his country home at Godalming, he entered with zest into many outdoor pursuits, including shooting, fishing, and golf.

In 1899 he married Miss Mary Bliss, and they had two sons and three daughters. His elder son, who succeeds to the baronetcy, is a captain in the Royal Navy. His younger son is a medical man, Dr. E. M. Buzzard, who has been serving in the R.N.V.R. One of his daughters married Dr. H. Gardiner-Hill, physician to St. Thomas's Hospital.

Sir ARTHUR MACNALTY writes:

I have known four Regius Professors of Medicine of Oxford—Sir John Burdon-Sanderson, Sir William Osler, Sir Archibald Garrod, and Sir Farquhar Buzzard. They were all eminent men in their profession, but the fourth, whose passing we lament to-day, was perhaps the man of the widest interests in life. He worked hard and he played hard. His early laurels were won in Association football, and his devotion to the game interfered with his success in the Schools. He was an all-round athlete, and up to the war held his own in tennis tournaments. He loved every form of sport, and it was noted that the Regius Professor could never be found at Oxford when the Grand National was being run.

Cradled in neurology, Buzzard surpassed his distinguished father in extending knowledge of the subject. I first got to know him well when encephalitis lethargica made its appearance. He asked me to see cases of the disease with him, invited me to medical discussions about it, and I got much insight into his profound knowledge of neurological disease and his gift for differential diagnosis. When he was asked to take the professorship at Oxford, at first he hesitated. I had some small part in effecting the compromise by which he continued to do consulting work in London. But the pressure of university duties at length made this impossible, and the sacrifice was the less in that by now Buzzard had discovered his great talent as an administrator. His many interests, his kindly personality, and especially his forthright speech and integrity made him *persona grata* with heads of houses, dons, medical colleagues, and undergraduates. Sometimes he was misjudged, sometimes his enthusiasm led him into error. These were small spots on the sun of his character. Above all, he served medicine and the Oxford Medical School wholeheartedly. It is well known that he had much to do with the founding of the Nuffield Professorships, nor should his work for the Nuffield Hospital Trust, which involved arduous journeys and conferences all over the British Isles, be forgotten. Lord Nuffield found in Buzzard a friend, a physician, and a helpful adviser in his munificent endowments to medicine.

As Buzzard grew older he retained his receptivity for new ideas. To several Oxford men the foundation of the Chair of Social Medicine in the University was a cherished hope. When I first discussed this with the Regius he was not in favour of the plan. I returned to the charge and drew up memoranda for him. In the end he was convinced, and it was through his support that the Chair and Institute of Social Medicine came into being. Nay, more, his study of the subject reorientated his views towards medicine generally; and his later papers and addresses emphasize the importance of the study of preventive medicine and environmental conditions in undergraduate and postgraduate medical education. In retirement he welcomed and helped his successor, Prof. Arthur Ellis, and he kept his interests in Oxford affairs.

Now he has gone from us. No longer can a friend wander into his rooms at Christ Church to be greeted by a genial growl as he pushes his tobacco pouch across to one. No longer can one hear the slow deliberate voice telling some amusing story or voicing plans for the National Health Service. He enjoyed life, sport, the open air, pictures, and people. He maintained the great traditions of the Oxford Medical School by strengthening its importance and influence. A loyal son of Oxford: he would have desired no better epitaph.

A. B. DANBY, F.R.C.S.Ed., F.R.C.O.G.

Mr. A. B. Danby, late of Edgbaston, Birmingham, died on Dec. 9 at Kidderminster. He was senior honorary gynaecological surgeon to the Birmingham United Hospital (Queen Elizabeth Hospital Unit), honorary obstetric surgeon to the Birmingham Maternity Hospital, and lecturer on clinical obstetrics and gynaecology and examiner in the same subjects at the University of Birmingham.

Alfred Beuthin Danby was born at Wellington, N.Z., in 1888, the son of Arthur S. Danby, and was educated at the public school in that city and at the University of New Zealand. Coming to this country to join Guy's Hospital Medical School he qualified in 1913. At Guy's he distinguished himself on the football field and was a member for three years of the XV, and served before the war of 1914–18 as house-surgeon, resident obstetrician, and out-patient officer. He held a commission as surgeon lieutenant, R.N., for four years, was present at the Dardanelles, and served with the Grand Fleet. On returning to civil life Danby became resident surgical officer at the General Hospital, Birmingham, and was elected to the visiting staff in 1921, as assistant gynaecologist. He joined the B.M.A. in 1919, was for a time honorary secretary of the Midland Medical Society, and later president of the Midland Obstetrical Society; he had also been a member of the Council of the Gynaecological Section of the Royal Society of Medicine. In addition to his main clinical posts in Birmingham Danby was visiting gynaecologist to the Mental Hospital there and an examiner for the Central Midwives Board. He held the F.R.C.S.Ed. diploma, and was elected a Fellow of the Royal College of Obstetricians and Gynaecologists in 1935. A number of papers by him appeared in the *Journal of Obstetrics and Gynaecology.*

Dr. Edmund H. L. Wigram, of Oxford, recently demobilized from the R.A.M.C., died on Dec. 2 at Bangor Infirmary from injuries received when he fell while climbing Idwal Slabs, Tryfan Mountain, North Wales. Dr. Wigram, who was only 34 years of age, took part in the main expedition under Mr. Hugh Ruttledge which tried to climb Mount Everest in 1936 but was defeated by bad weather. He studied for the profession at Cambridge and St. Thomas's Hospital, took the Conjoint diplomas in 1937 and the M.B., B.Ch. degrees a year later, and after serving as obstetric house-physician at St. Thomas's became in turn house-physician and house-surgeon at the Radcliffe Infirmary, Oxford.

Dr. H. H. McClelland died at Ballymoney, Co. Antrim, on Oct. 5, at the age of 52. He had been at work as usual in the local dispensary during the morning and retired to rest when he came home, as he was not feeling well; a short time later he died in his sleep. Hugh Harper McClelland graduated M.B. at Queen's University, Belfast, just before the outbreak of the 1914–18 war and joined the R.A.M.C. shortly after. He served with the 2nd Battalion of the Cheshire Regiment in Salonika, Transcaucasia, and Turkey. In 1920 he was appointed medical officer for Ballymoney Dispensary District; he had already built up a successful practice in this district. He was appointed M.O.H. for Ballymoney Urban District in 1926, and for the past twenty years was deputy coroner for North Antrim. Dr. McClelland was a great friend of the poor people in his district, and was very well liked by all classes. He was an extremely popular member of the North-East Ulster Division of the B.M.A., and his cheery personality made him a great favourite with his colleagues. He took a keen interest in the welfare of the ex-Servicemen and was always willing to help them in any way he could. He was president of the local branch of the British Legion. He is survived by his wife, two sons, and a daughter. His elder son, Major R. McClelland, R.A.M.C., is serving in India, his second son is still at school, and his daughter assisted her father as secretary.

News has reached this country of the death on Oct. 3 at Leopoldville, Belgian Congo, of Miss Frances Margaret Harper, M.B., Ch.B., one of the early women graduates of the University of Edinburgh. Born in Edinburgh in 1876, she graduated in 1903, and took the D.P.H. of Cambridge in 1904 and the D.T.M. of the English Conjoint Board in 1913. In her youth she had studied the violin at Milan, but later made medicine her career, and after qualifying held the posts of M.O.H. at St. Helens and at Stoke-on-Trent, and house-surgeon at the West End branch of the Glasgow Maternity Hospital. During the last war Dr. Harper was attached to the No. 3 Malta Company of the R.A.M.C., and later served as medical officer with the English Mission to Czechoslovakia. For nearly a quarter of a century she worked as medical missionary in the district of Lake Leopold II in Central Africa, at first attached to Baptist missions, but for the past twelve years at Lediba, on the banks of the River Kasai, where she established a private hospital. Living a lonely life in the bush she devoted herself to the care of sick natives. Her work was recognized by diplomas from the University of Paris and the Belgian Colonial Ministry.

A correspondent sends the following memoir supplementing the brief notice published on Oct. 27. Dr. D. Johnston Jones was the son of Dr. David Jones, of Everton, near Liverpool, who enjoyed a large and good-class practice for forty years, until 1893, when he retired to Brighton, where he died on May 20, 1903. The *British Medical Journal* described him as "the very type of the trusted family practitioner" and as "a man endowed with a most kindly heart and with admirable common sense, so that no wonder that his patients respected and confided in him." David Johnston Jones, who was educated at Edinburgh University, University College, London, and in Paris, took his M.B., C.M. of Edinburgh in 1877 and his M.D. in 1879, and the M.R.C.S.Eng. in 1877. He was house-surgeon in Liverpool Royal Infirmary, and assistant medical officer and pathologist at Somerset County Asylum, assistant medical officer and pathologist at Gloucester County Asylum, and subsequently became senior assistant medical officer in Kent County Asylum at Maidstone. On March 3, 1890, he was appointed senior medical officer at the London County Asylum for mental and nervous diseases at Banstead, Surrey, where he worked under the late Dr. T. Claye Shaw and with Dr. Hubert Bond, who was a junior medical officer then. On Oct. 1, 1901, Dr. Johnston Jones was appointed medical superintendent of Banstead Asylum. The late Sir Hubert Bond, when Senior Commissioner of the Board of Control, stated that Dr. David Johnston Jones used to devote half his salary at Banstead for the benefit of the staff and the patients, and that he was so devoted to his professional work and the patients that he made a practice of visiting every day all the 2,000 patients under his control. He retired from Banstead on July 25, 1910, and went to live at Worthing to take care of his widowed mother, to whom he was devoted. She died there in 1913. After her death Dr. D. Johnston Jones went to live in different places, but finally built himself the house of "Adwy" in Vicarage Avenue, Llandudno, where after a long illness he died, a good friend and a charming personality to the last. He was buried on Sept. 26 near his brother, the late Col. John Matthews Jones, A.D.M.S., R.A.M.C., in the churchyard of St. Tudno's Church, near the Great Orme.

The late Dr. E. Gilbert Bark, emergency medical officer for Wallasey from 1938 onwards, studied medicine in Birmingham, and took the M.B.Lond. degree, with honours in medicine, in 1901, and the B.S. in 1902. After graduating he was for a time prosector in the Anatomical Department of Mason College and house-surgeon at Queen's Hospital, Birmingham. Settling in practice at Wallasey Dr. Bark became honorary medical officer to the Victoria Central Hospital, and, in the words of a colleague, his sound knowledge and great kindliness combined to make him a fine practitioner of medicine, a notable citizen, and a trusted leader of the medical profession in the borough. During the war years he was chairman of the Wallasey Division of the B.M.A. (which he had joined in 1907) and of the Local Medical War Committee. In the latter capacity he gave valuable service, his ripe experience, quick insight, and sound judgment making him an excellent chairman of a body which often had to take difficult and invidious decisions. Striking evidence of the esteem and affection in which he was held in Merseyside was provided by the large congregation assembled in Liverpool Cathedral for a memorial service conducted by the Dean. Dr. Bark was a former president of the Liverpool Medical Institution, and in memory of that fact the lesson was read by Mr. Robert Kennon, this year's president. The Dean in his address said that there was no person so important in the life of to-day as the family doctor, and Wirral could imagine no family doctor more perfectly fitting the ideal than he whom they remembered that day.

Medical Notes in Parliament

Shortage of Doctors and the "Call-up"

Capt. Chetwynd on Nov. 29 asked whether the Minister of Health knew of the shortage of house-surgeons in hospitals in the North-East. He asked Mr. Bevan to take all possible steps to remedy this, including securing the deferment of newly qualified doctors from military service. Mr. Bevan replied that he was aware that hospitals in many parts of the country were short of resident officers. Newly qualified doctors were already allowed six or twelve months' deferment of military service, which could be extended in special circumstances.

Mr. Leslie asked the Minister of Health if he would arrange that doctors with a large practice in mining areas would not be deprived of their assistant doctors when called up for military service until a substitute doctor could be obtained. Mr. Bevan replied that it was open to the Central Medical War Committee to defer the recruitment to the Forces of a general practitioner's assistant in any area where there were special circumstances justifying such deferment. The committee, in consultation with the Local Medical War Committee, gave careful consideration to the needs of the civilian population in all such cases.

Motor Cars for Doctors

Mr. Barnes on Dec. 10 told Mr. Touche that the long delay experienced by doctors in obtaining new motor cars essential for their work was due to the comparatively small number of new cars so far produced. The Minister of War Transport had issued licences at a rate to cover anticipated production, and high priority had been given to doctors. On a rough estimate he had granted some 3,500 licences to doctors out of the total of 14,000 licences granted. Some 500 applications from doctors were outstanding.

Release from the Forces

On Dec. 13 Col. Stoddart-Scott asked what were the principles upon which had been based the acceleration of the release of medical officers from the Forces under Class A to relieve the inadequacy of the medical services for the civilian population; how many doctors would be demobilized under existing arrangements by Jan. 1, 1946, under A and B; and how many would be demobilized from the Services during the first six months of 1946. In reply Mr. Bevan said that in accelerating the release of medical officers from the Forces the aim had been to reduce the ratio of doctors to serving personnel to about 2 per 1,000. He could not give the exact number who would be released by Jan. 1 next, but it was expected to be at least 5,000. He regretted that he could not give a total to June, 1946. He was satisfied that considerable acceleration would be achieved.

Alien Doctors

Mr. Ede, replying on Dec. 13 to Major Symonds, said alien doctors on the permanent *Medical Register* required permission to take a new appointment only if their stay here was subject to conditions requiring them to apply to the Home Office for such permission. The supervision of the work undertaken by alien doctors who were only temporarily registered has been entrusted to the Central Medical War Committee.

Early Recognition of Cancer

Mr. Hastings asked Mr. Bevan on Dec. 13 whether, in view of the fact that there were about 70,000 deaths annually from cancer and that a large proportion of these patients only obtain specialist treatment when too late, he would provide lectures for general practitioners on the early recognition of this disease. Mr. Bevan said Mr. Hastings's object could perhaps be best attained by encouraging early and frequent consultation between general practitioners and specialists in the work of diagnosis and treatment. Organized arrangements for this purpose were now being developed under the Cancer Act, 1939, so far as present circumstances permitted. Mr. Hastings said that where the lectures he advocated had been instituted they had been appreciated and well attended by general practitioners. Mr. Bevan said he would direct the attention of the relevant authorities to that comment.

Col. Stoddart-Scott suggested that Mr. Bevan should take steps to instruct the public in the early symptoms of cancer. Mr. Bevan, "speaking on the impulse of the moment," thought that would be extremely dangerous.

Report on Mental Nursing

Mr. Bevan stated on Dec. 13 that he and Miss Wilkinson had received from the Earl of Athlone the report of the Subcommittee on Mental Nursing and the Nursing of the Mentally Defective which was appointed by the Athlone Interdepartmental Committee on Nursing Services. The report, which would be published before the House rose for the recess, was a most valuable survey of the whole field falling within the subcommittee's scope. He proposed to obtain without delay the views of the various interested bodies regarding the recommendation, many of which would require legislation.

Formula of Penicillin

Mr. John Lewis inquired on Dec. 13 by whom penicillin had been synthesized and what was the structural formula. Mr. Herbert Morrison said a practical process for synthesizing penicillin had not yet been evolved. He understood that the British workers associated with the Medical Research Council and their American collaborators proposed to publish available information at an early date regarding the structural formula.

Research into Pneumoconiosis.—On Dec. 7 the Workmen's Compensation (Pneumoconiosis) Bill passed through committee without amendment. Its third reading was then proposed. On this Mr. Somerville Hastings said the Bill would teach something of the natural history of the disease. By extending the period of observation on former miners who, during the war, had been engaged on war service or war industry, the Bill would enable information to be obtained about the disease which had not been known before. Mr. Lindgren said research had been extended but had not been developed to the extent Mr. James Griffiths desired, mainly because of the shortage of experts. The Ministry of National Insurance would be glad to use the opportunities of research which this small Bill gave. The Bill was read a third time.

Notes in Brief

There are approximately 4,000 public vaccinators in England and Wales, practically all of whom are doctors in general practice. The number of vaccination officers is not readily ascertainable: they are generally local government officers engaged in other duties also. There are no inspectors charged with the duty of inspecting vaccination marks. The staff of the Government Lymph Establishment numbers 25.

At the end of 1944 there were thirteen full-time medical inspectors and 1,862 examining surgeons appointed under the Factories Act. In addition there were known to be approximately 180 doctors exercising full-time medical supervision and 890 exercising regular part-time supervision in factories. During the past year there has been no substantial change in these numbers.

Mr. Ivor Thomas announced on Dec. 5 that the Air Ministry Flying Personnel Committee has made intensive studies, both under laboratory conditions and in the field, of the effect on aircrew fatigue of long range and altitude flying and a constant change from one climatic condition to another.

From Jan. 1, 1940, when the Various Industries (Silicosis) Compensation Scheme was extended to cover workmen employed underground in slate mines, up to Sept. 30, 1945, the total number of workmen in North Wales slate mines certified by the Silicosis Medical Board to be suffering from silicosis or silicosis accompanied by tuberculosis was 103. There were 8 in 1940, 5 in 1941, 17 in 1942, 12 in 1943, 26 in 1944, and 35 up to Sept. 30, 1945.

At present persons who enter Malaya are required to take precautions against infection by means of inoculation and vaccination. Mr. Lawson states that there is a serious shortage of hospital facilities and medical staff and that it is necessary to prevent avoidable additions to the tasks of the military administration. These include the prevention and control of disease. Mr. Lawson also states that comprehensive and detailed instructions have been issued on the medical examination of prisoners of war from the Far East.

Universities and Colleges

UNIVERSITY OF CAMBRIDGE

The following candidates have been approved at the examination indicated:

FINAL M.B.—*Part I (Surgery, Midwifery, and Gynaecology):* A. V. Adams, D. M. C. Ainscow, D. J. ap Simon, C. M. Attwood, J. G. Benstead, E. M. M. Besterman, D. A. L. Bowen, D. K. Briggs, J. A. Bulleid, J. W. Coleman, D. M. T. Cones, D. J. Crockett, T. M. Cullingworth, P. S. Davis, J. R. B. Dixey, R. D. Eastham, A. C. Elithorn, A. M. Elliott, P. A. Emerson, J. B. D. Evans, H. S. Eyre, A. S. Falconer, J. B. Frost, J. Gloster, R. E. Gruchy, L. Haas, P. S. Hall, P. M. R. Hemphill, P. F. C. Jackson, K. E. Jefferson, A. G. Jessiman, I. S. M. Jones, J. W. Ker, J. G. Kilner, G. L. Leathart, J. D. Lever, R. H. G. Lyne-Pirkis, A. D. R. MacAuslan, J. McFie, I. K. R. McMillan, H. G. Mather, S. R. Mawson, P. A. Merton, R. I. Milne, J. J. Morland K. S. Murray, I. M. Ormerod, J. V. Owen, I. M. Ramsden, J. W. T. Redfearn, J. F. F. Rooney, O. C. A. Scott, J. G. Selwyn, D. Seymour, R. E. Sidebotham, D. R. Smith, J. S. Swallow, C. E. D. Taylor, A. D. Thomson, H. W. Trusted, S. Vakil, W. van't Hoff, D. R. Wallace-Jones, L. G. R. Wand, J. C. Ward, I. W. Whimster, H. Whitmore. *Women:* R. S. J. Baker, J. E. G. Brieger, J. Chivers, F. M. Fountain, J. F. Grant, M. Hobson, P. A. Howard, E. G. Howe, G. M. Hunt, C. M. E. Jones, H. M. J. Lawn, B. M. Leach, S. M. McNeile, Mrs. A. M. P. Pantin, A. M. Senior-Tolson, A. M. Sibly, G. C. Thompson, A. S. Willis.

UNIVERSITY OF LONDON

The following candidates have been approved at the examination indicated:

POSTGRADUATE DIPLOMA IN PSYCHOLOGICAL MEDICINE.—*B. G. C. Ackner, *G. A. W. Angus. *Part A:* T. Freeman, A. P. Micallef, J. M. Tanner.

* With Mental Diseases (Psychiatry)

UNIVERSITY OF MANCHESTER

At a meeting of the University Council, held on Dec. 14, Robert Platt, M.D., F.R.C.P., was appointed full-time Professor of Medicine in the University.

The Medical Students' Representative Council has established a Wood Jones Foundation Lecture to mark the esteem in which Prof. F. Wood Jones, F.R.S., F.R.C.S., has been held by the student body during his tenure of the Chair of Anatomy in the Manchester Medical School. He is leaving the city to take the Sir William J. Collins Chair of Comparative Anatomy at the Royal College of Surgeons of England, and he himself gave the first lecture of the series on Dec. 11 in the University Chemistry Theatre at Manchester.

The following candidates have been approved at the examinations indicated:

FINAL M.B., CH.B.—*†Mary Goodyear, *†J. E. Morris, R. L. Armistead, F. M. Benton, J. B. Brooks, K. Burchill, G. H. Burgess, P. J. Burke, G. L. Cantrell, G. R. Carr, Elsie M. Dakin, Jean B. Fletcher, Nora Harnden, P. W. Harvey, J. A. Jamieson, Elizabeth Jenkins, H. A. Koretz, T. K. J. Leese, J. D. Lumsden, B. Marsden, Jessie Million, Margaret W. Oliver, Margaret Rhodes, F. N. Valdez, W. M. Whittaker. *Part I (Forensic Medicine and Hygiene and Preventive Medicine):* J. C. T. Archer, S. F. Gilbert, Christine M. Hope, J. B. Howard, D. P. Howarh, D. P. Keirby, Theresa P. Lee, O. R. W. Sejrup, H. Simpson, J. H. M. Thomas, C. H. Thompson, H. W. Wyile.

* Awarded second-class honours. † Awarded distinction in medicine.

UNIVERSITY OF EDINBURGH

A graduation ceremonial was held on Dec. 14, when the following degrees and diplomas were conferred:

M.D.—J. H. M'Intyre, [3] O. A. S. Marais, [2] Lieut. J. F. O. Mitchell, R.A.M.C., R. J. E. Paterson, [3] Major J. F. Riley, R.A.M.C., [1] A. E. Ritchie, [2] I. M. Scott, [1] Sheila P. V. Sherlock, [3] L. M. Thompson, [3] Major W. S. Watson, R.A.M.C.

CH.M.—I. A. G. L. Dick.

M.B., CH.B.—J. C. S. Adams, B. A. Cookson, F. E. Cull, A. Douglas, S. C. Dryden, K. D. Foggitt, May L. Gilbert, R. E. Glenn, W. H. Graham, K. A. R. Henry, W. R. Johnson, I. J. M. Lumsden, J. R. M'Callum, D. L. Mackay, Margaret M. Macpherson, Eileen M. Munn, T. M. Ness, T. H. Park, D. F. Robertson, D. J. Rodger, Daphne G. D. T. Smedberg.

DIPLOMA IN MEDICAL RADIOLOGY.—A. A. N. Bain, J. R. Condon, E. F. Ridley.

[1] Awarded gold medal for thesis. [2] Commended for thesis. [3] *In absentia.*

ROYAL COLLEGE OF SURGEONS OF ENGLAND

The Moynihan Lecture will be delivered by Mynheer Willem Noordenbos, Hon. F.R.C.S., professor of surgery in the University of Amsterdam, at the College (Lincoln's Inn Fields, W.C.) on Wednesday, Jan. 9, 1946, at 5 p.m. His subject is "The Choice of Oblique and Transverse Incisions in Abdominal Surgery." The lecture is open to medical practitioners and advanced students.

Prof. and Mrs. Noordenbos will be present at the College monthly subscription dinner at 7 p.m. on Jan. 9, and Fellows and Members and their wives may like to take the opportunity of meeting them. If so, they should notify the secretary of the College at least a week in advance.

Other lectures to be delivered at the College are as follows: Jan. 3, Arris and Gale Lecture by Mr. Norman Capener, Physiological Rest: The Orthopaedic Principle; Jan. 10, Hunterian Lecture by Prof. Ivor Lewis, The Surgical Treatment of Carcinoma of the Oesophagus, with Special Reference to a New Operation for Growths of the Middle Third; Jan. 17, Hunterian Lecture by Prof. P. W. Clarkson, The Treatment of Face and Jaw Casualties in the British Army; Jan. 24, Hunterian Lecture by Prof. C. H. Gray, Sciatica; Jan. 31, Hunterian Lecture by Prof. S. H. Wass, The Odontomes and Other Affections of the Jaws: Their Pathology, Diagnosis, and Treatment. All the lectures begin at 5 p.m.

FACULTY OF RADIOLOGISTS

The following candidates have satisfied the Fellowship Board at the examination for the Fellowship of the Faculty: *Radiodiagnosis:* H. R. Holmes, M.D., D.M.R.E., A. S. Johnstone, M.D., F.R.C.S.Ed., D.M.R.E., J. H. Smitham, M.B., B.S., D.M.R.E. *Radiotherapy:* M. Halberstaedter, M.B., B.S., D.M.R.E.

The Services

Surg. Capt. (Acting Surg. Rear-Admiral) C. E. Greeson, R.N., has been appointed C.B. (Military Division) for distinguished service throughout the war in Europe.

Temp. Surg. Lieut. A. P. B. Waind, R.N.V.R., has been mentioned in dispatches for good service and devotion to duty shown during the defence of Calais in May, 1940.

Capts. A. Barber, J. F. Pantridge, and T. B. Smiley, R.A.M.C., have been awarded the M.C. in recognition of gallant and distinguished services in Malaya in 1942.

The Efficiency Decoration of the Territorial Army has been conferred upon the following officers: Majors (Temp. Lieut.-Cols.) A. Dyce Davidson, R. K. Hanlin, and H. B. Trumper; and Majors C. F. Critchley, J. C. McFarland, and J. R. Wright, R.A.M.C.

The following appointments and awards have been announced in recognition of gallant and distinguished services in Italy:

C.B.E. (Military Division).—Brig. (Temp.) G. S. Parkinson, Brig. (Local) E. R. Boland, O.B.E., R.A.M.C., and Brig. (Acting) G. P. Kidd, M.C., late R.A.M.C.

O.B.E. (Military Division).—Cols. (Acting) A. C. Turner and W. R. Martine, M.B.E., T.D.; Cols. (Temp.) W. A. D. Drummond, R. E. Rees, M.C., T.D., J. T. Robinson, T. B. H. Tabuteau, and T. Young; Lieut.-Cols. R. Coyte and A. L. Crockford, D.S.O., M.C., T.D.; Lieut.-Cols. (Temp.) T. F. Briggs, J. J. M. Brown, F. A. Donnolly, F. J. Fowler, R. H. Hunt, J. D. P. Macpherson, J. G. McCrie, G. W. Molyneux, T. T. P. Murphy, O. A. Savage, D. Thomson, and P. H. Wood, R.A.M.C. Col. (Acting) D. Bhatia, Col. (Temp.) D. H. Waldron, and Lieut.-Col. (Temp.) A. M. Mackenzie, I.A.M.C.

M.B.E. (Military Division).—Lieut.-Col. (Acting) I. B. Pirie; Major J. C. Wishart; Majors (Temp.) H. Bridges, W. A. Carey, P. W. Clarkson, H. J. Croghan, E. A. Fiddian, K. B. Gibson, J. Gillang, A. F. W. Hall, H. D. Hunter, A. R. Kennedy, S. E. Large, J. Littlejohn, J. D. Miller, W. Storrar, R. I. Mitchell, W. F. Nicholson, G. A. G. Peterkin, and D. J. D. Torrens; Major (Acting) D. McV. Morrison; Capts. J. Comyn, F. J. Gillingham, J. Scobbie, and A. S. Smith; Lieut. J. Noble, R.A.M.C. Major (Temp.) H. M. Archibald, I.A.M.C.

D.S.O.—Lieut.-Col. (Temp.) R. B. Wright, O.B.E., R.A.M.C., and Lieut.-Col. (Temp.) W. Laurie, I.A.M.C.

M.C.—Capts. J. A. L. Cooper, W. A. Dewar, A. M. Gwynn, and J. S. Walters; Capt. (Temp.) N. J. Craig, R.A.M.C. Capts. K. C. Ganapathy, J. R. Pereira, K. M. Rao, and R. R. Rao, I.A.M.C.

DEATHS IN THE SERVICES

Major-Gen. DONALD CLEWER, C.B., Colonel Commandant of the Army Dental Corps and formerly Director of the Army Dental Service, died in hospital on Dec. 11. He received his professional training at Guy's Hospital, and qualified L.D.S., R.C.S. in 1914. In 1940 he was the first officer of the Army Dental Corps to reach the rank of major-general. In recognition of his outstanding service he was created C.B. in 1942.

No. 49

INFECTIOUS DISEASES AND VITAL STATISTICS

We print below a summary of Infectious Diseases and Vital Statistics in the British Isles during the week ended Dec. 8.

Figures of Principal Notifiable Diseases for the week and those for the corresponding week last year, for: (a) England and Wales (London included). (b) London (administrative county). (c) Scotland. (d) Eire. (e) Northern Ireland.

Figures of Births and Deaths, and of Deaths recorded under each infectious disease, are for: (a) The 126 great towns in England and Wales (including London). (b) London (administrative county). (c) The 16 principal towns in Scotland. (d) The 13 principal towns in Eire. (e) The 10 principal towns in Northern Ireland.

A dash — denotes no cases; a blank space denotes disease not notifiable or no return available.

Disease	1945					1944 (Corresponding Week)

Rate per 1,000 total births (including stillborn)			31					30		

---

* Measles and whooping-cough are not notifiable in Scotland, and the returns are therefore an approximation only.

† Includes primary form for England and Wales, London (administrative county), and Northern Ireland.

‡ Includes puerperal fever for England and Wales and Eire.

§ Owing to movements of population, birth and death rates for Northern Ireland are still not available.

EPIDEMIOLOGICAL NOTES

Discussion of Table

In *England and Wales* a further increase in measles, 110 more cases, was recorded, while scarlet fever, whooping-cough, and diphtheria went down by 100, 159, and 102 respectively.

The decrease in scarlet fever was due to a slight fall in most parts of the country, no area showing any large change in incidence. The fall in diphtheria was mainly contributed by the north—Lancashire had 39 fewer cases, Yorks West Riding 19 fewer, and Northumberland 15 fewer; in the southern part of the country there was a slight rise.

The largest variations in the local trends of whooping-cough were decreases in Staffordshire 32, Lancashire 30, and Essex 25, and an increase in London 23. Two counties were mainly responsible for the rise in measles—Lancashire and Pembrokeshire, with increases of 56 and 27.

No fresh outbreak of dysentery occurred during the week, the increase of 11 being due to rises in existing outbreaks. The largest returns were: Lancashire 44, London 36, Warwickshire 21, Berkshire 17, Glamorganshire 16, Essex 12, Surrey 10, Middlesex 10.

In *Scotland* the incidence of acute primary pneumonia was higher by 30 cases, while decreases were recorded for diphtheria 40, scarlet fever 34, and dysentery 18. Contrary to the general trend, a slight increase in dysentery occurred in Glasgow, where 30 of the 50 cases were notified.

In *Eire* the notifications of diphtheria fell by 13, and whooping-cough by 16, but there were 20 more cases of measles. A small decline was reported in the notifications of diarrhoea and enteritis; the 41 cases is the lowest total since the beginning of August.

Quarterly Returns for Eire

The birth rate during the third quarter was 22.9 per thousand, being 1.3 above the September quarter of the preceding year. The infant mortality was 58 per thousand registered births, and 5 below the corresponding figure for the third quarter of 1944. The general death rate was 11.9 per thousand, this rate being 0.1 and 0.2 below the rates for 1944 and 1943, but from 0.3 to 0.5 above that for 1940–2. Deaths from pulmonary tuberculosis numbered 654, and from other forms of tuberculosis 204; these were 53 and 22, respectively, in excess of the third quarter of 1944. Of the 403 deaths from the principal epidemic diseases, 330 were attributed to diarrhoea and enteritis under 2 years, 34 to diphtheria, and 21 to whooping-cough.

Week Ending December 15

The notifications of infectious diseases in England and Wales during the week included: scarlet fever 1,753, whooping-cough 1,195, diphtheria 575, measles 619, acute pneumonia 969, cerebrospinal fever 44, acute poliomyelitis 10, dysentery 313, typhoid 6.

On Dec. 17 representatives of 48 local authorities and others co-operating with the Department of Scientific and Industrial Research in the study of atmospheric pollution met officers of the Department in conference at the County Hall, Westminster, under the chairmanship of Dr. J. A. Gillison of the L.C.C. In a message to the conference Mr. Herbert Morrison (Lord President of the Council) stressed the importance of collaboration between local authorities and D.S.I.R. in maintaining records of pollution up and down the country, and added, "We cannot have a clean Britain on the ground with perpetually dirty skies above." The conference learnt with satisfaction that 30 additional recording instruments had been brought into use during the year and that a number of authorities had started to take observations for the first time. It recorded the view that "it is only by maintaining continuous records at a large number of sites and by statistical treatment of the data so obtained that exact knowledge can be acquired of the amount and the trends of pollution. This knowledge is to-day more important than ever when so many replanning schemes are under consideration." Dr. G. M. B. Dobson, F.R.S., said that the standardization of measurement, the co-ordinating of local observations, and fundamental research on problems of atmospheric pollution previously carried out on the advice of the Atmospheric Pollution Research Committee would in future form part of the work of the Department's Fuel Research Station, where it would be effectively linked with practical work already in hand there aiming at the prevention of pollution.

Medical News

The London Women's Parliament will hold its sixth session on Sunday, Jan. 6, at B.M.A. House, Tavistock Square, W.C. The subject is the rebuilding of family life, and it will bring together women from all walks of life—factory workers, doctors, nurses, teachers, trade unionists, housewives and mothers, welfare workers, and representatives of local authorities.

The British Social Hygiene Council (Tavistock House North, Tavistock Square, London, W.C.1) and the Town and Country Planning Association (28, King Street, Covent Garden, London, W.C.2) have organized a conference on the needs and problems of the family, to be held on Thursday, Jan. 24, and Friday, Jan. 25, 1946, at B.M.A. House, Tavistock Square, London, W.C.1. The object of the conference is to throw light upon the questions which are involved in the present changing pattern of family life, with the problems of population to which it gives rise. The convenors consider that the outstanding practical family problem is the need for sufficient family houses of high space standard and equipment, properly placed in relation to work-places and to all necessary social and educational services; but other practical problems will also receive attention. The Rt. Hon. Lord Pakenham will open the proceedings on Thursday morning at 10.45. Speakers during the two days will include Mr. R. F. Harrod (on population trends), Dr. Greenwood Wilson (on health services and the family), Miss E. Halton and Mr. R. Weatherall (housing and education), Prof. F. A. E. Crew, Dr. David Mace, and the Rev. Gilbert Russell (biological and psychological aspects), and Mr. F. J. Osborn (planning for the family in the community). Local authorities wishing to send delegates to the conference will receive permission from the Ministry of Health for the expenses of two delegates. Tickets may be obtained from their own association by members at 5s., or from the offices of either association by non-members at 10s.

The annual general meeting of the Medical Society of the L.C.C. Service will be held at County Hall, Westminster Bridge, S.E., on Wednesday, Jan. 9, at 4.30 p.m., when Sir Allen Daley will deliver his presidential address.

The headquarters office of the Medical Research Council, which has been housed during the war in the London School of Hygiene and Tropical Medicine, will reopen at 38, Old Queen Street, Westminister, S.W.1 (Telephone Whitehall 4884), on Dec. 31. The director of the Public Health Laboratory Service is included in the move.

It was announced on Dec. 19 at a special meeting of the Court of Governors of St. George's Hospital that a suitable site has been found for the new buildings of the hospital when it moves from Hyde Park Corner. The proposed site (approximately 30 acres) forms part of the Springfield Mental Hospital at Tooting. The report of the House Committee, outlining a scheme for a general hospital of 850 to 1,000 beds, complete with a medical school and facilities for research and for training student nurses, was presented by Sir Malcolm Trustram Eve and approved by the Court. Sir Walter Monckton was elected chairman of the hospital in succession to Lord Greville.

In January an American medical journal, *Blood: the Journal of Hematology*, will be published bi-monthly by Grune and Stratton Inc., 381, Fourth Avenue, New York 16, N.Y., U.S.A. The editor-in-chief is Dr. William Dameshek of Boston. He will be supported by five associate editors; and also by Dr. George R. Minot as consulting editor. The annual subscription to the journal is $7.50 for subscribers outside the United States. Messrs. H. K. Lewis and Co., Ltd., are distributors of the journal in this country.

Rearrangements of interdepartmental machinery have now been completed for the transfer of responsibility from the Board of Trade to the Ministry of Supply in the field of engineering. The headquarters organization concerned is the Engineering Industries Division, Ministry of Supply, I.C. House, Millbank, S.W.1. The transfer of Board of Trade responsibilities in this respect covers scientific instruments and laboratory apparatus, surgical and hospital instruments and equipment, photographic and optical equipment and accessories therefor.

Sir Henry Dale, O.M., President of the Royal Society 1940–5, will retire from his position as Fullerian Professor in the Royal Institution and Director of the Davy-Faraday Research Laboratory on Sept. 30, 1946.

The National Institute for the Blind in its annual report says that blind physiotherapists are to-day busier than ever before. In the last year of the war the blind staff at the Eichholz Clinic in London gave 11,866 treatments, while senior students working under supervision at the N.I.B. evening clinic gave 12,587 treatments. The school of massage has now changed its name to the school of physiotherapy.

Letters, Notes, and Answers

All communications with regard to editorial business should be addressed to THE EDITOR, BRITISH MEDICAL JOURNAL, B.M.A. HOUSE, TAVISTOCK SQUARE, LONDON, W.C.1. TELEPHONE: EUSTON 2111. TELEGRAMS: *Aitiology Westcent, London*. ORIGINAL ARTICLES AND LETTERS forwarded for publication are understood to be offered to the *British Medical Journal* alone unless the contrary be stated.

Authors desiring REPRINTS should communicate with the Publishing Manager, B.M.A. House, Tavistock Square, W.C.1, on receipt of proofs. Authors over-seas should indicate on MSS. if reprints are required, as proofs are not sent abroad.

ADVERTISEMENTS should be addressed to the Advertisement Manager, B.M.A. House, Tavistock Square, London, W.C.1 (hours 9 a.m. to 5 p.m.). TELEPHONE: EUSTON 2111. TELEGRAMS: *Articulate Westcent, London*.

MEMBERS' SUBSCRIPTIONS should be sent to the SECRETARY of the Association. TELEPHONE: EUSTON 2111. TELEGRAMS: *Medisecra Westcent, London*.

B.M.A. SCOTTISH OFFICE: 7, Drumsheugh Gardens, Edinburgh.

ANY QUESTIONS?

Benzyl Benzoate for Scabies

Q.—*What are the advantages and disadvantages of benzyl benzoate? A patient of mine was told six months ago that he had scabies, and that he should rub in benzyl benzoate. This he foolishly did for six months, and now when he goes to bed he suffers with intense irritation. Could this irritation be due to the benzyl benzoate? What is your opinion on the use of tetmosol soap?*

A.—Benzyl benzoate in 25% concentration was standardized, as a wartime measure, as the most convenient remedy for scabies. Two applications only are required, given on consecutive days, the whole body below the neck being covered by the emulsion. Disinfection of contact garments and bedding is recommended, although some experts consider this unnecessary. Contacts also require treatment, even if they appear free from skin disease. The patient who has rubbed in benzyl benzoate for six months must have a remarkably tough skin, and can count himself extremely fortunate to be no worse than itchy. Applications of a mild boric-zinc ointment, avoiding baths, ought to restore the skin to normal in time. Tetmosol soap is valuable as a stopgap when organized treatment is not available—for example, in liberated territory.

Renal Tuberculosis

Q.—*A man aged 50 had a tuberculous kidney removed several months ago. He now suffers from increased frequency of micturition, night and day, dysuria, and severe spasms of perineal pain. Alkalis and belladonna temporarily relieve his dysuria. I would appreciate any suggestions for the alleviation of his symptoms. His general condition is excellent.*

A.—It is impossible to answer this question, for no information is given as to the condition of the remaining kidney. Is it completely healthy? If it is tuberculous, then no improvement in the symptoms can be expected. Presumably the health of the opposite kidney was established before nephrectomy; if so, the symptoms are likely to result from a failure to remove the whole of the ureter on the affected side, so that existing disease there maintains the bladder inflammation. The operation of residual ureterectomy may be expected to produce a cure.

Intramuscular Injection of Liver

Q.—*Apart from pernicious anaemia, what are the indications for the intramuscular injection of liver extract? Is liver extract a good tonic? What are the indications? Is it justifiable to give injections of liver extract without examination of the blood?*

A.—It is difficult to explain the action of tonics on pharmacological grounds. The choice of materials is influenced by ideas rather than by experiment, and in our own time we have seen arsenic, quinine, and the hypophosphites decline in favour and give place to the vitamins and liver extract. There is evidence that certain substances, such as nicotinic acid and acid sodium phosphate, may increase the output of energy in health, but this effect is at best slight. The prescription of a tonic implies that the patient is mildly ill, in a physical or mental way, and usually that the appetite is impaired; it is conceivable that liver extract might stimulate appetite under these condtions. As a general rule, however, tonics seem to be made by analogy—because quinine reinvigorates the patient with malaria, it will relieve debility from other causes—and they act mainly by suggestion. Suggestion is especially powerful when the material is given by injection. The ritual of asepsis and the pain of injection combine to influence the patient, and the relief which female patients claim from injections of drugs often has a transparent sexual tinge. It is not unusual for patients to develop an addiction for injections of drugs so inactive that one must conclude that the addiction is to the injection and not to the drug. The whole topic of parenteral therapy is controversial, and it is enough to say that it may easily degenerate into conscious or unconscious quackery, as has happened in a number of Oriental countries. Liver extract may be a good tonic in certain hands, but there is no evidence that in a controlled trial it would prove superior to injections of normal saline solution.

It should be noted that in accordance with Ministry of Health regulations, which have been issued on account of the present shortage, liver extract may be given by mouth only in pernicious anaemia and related megalocytic anaemias, such as sprue and nutritional macrocytic anaemia. In what follows it is assumed that liver extract is given by injection.

Liver extract is a good source of the B vitamins. Some of the constituents, such as folic acid, have been isolated only recently, and there may be others still to be discovered. This group of vitamins has a complex and extensive action on the gastro-intestinal tract, and injection of liver extract has been particularly recommended in ulcerative colitis, in which deficiency of vitamins may develop. Liver extract is also of value in leucopenia, and perhaps because of this action it may counteract the depression produced by *x*-ray therapy. It has been recommended for the treatment of cirrhosis of the liver, particularly when ascites is present. It seems probable that when liver extract excites a therapeutic effect in conditions other than the megalocytic anaemias, it does so by virtue of elements of the vitamin-B complex and not the haemopoietic principle. In such conditions it would be justifiable to inject liver extract without examination of the blood. It is, nevertheless, desirable to examine the blood before embarking on so elaborate a treatment, if only to emphasize the fact that too much should not be expected of liver therapy in conditions other than pernicious anaemia.

Posture in Heart Disease

Q.—*Recent experimental work seems to show that in the normal heart cardiac output is greater in the supine than in the erect position. Is this having any influence on modern teaching with regard to the posture recommended in cases in which the chief requirement is a reduction of the work of the heart?*

A.—In heart failure reduction of the work of the heart by physical rest is always the prime consideration; but, as heart failure interferes with breathing and the patient finds that this is most easily done when he sits up, it is usual, in fact necessary, for a sitting posture to be maintained, so that by this means benefit in breathing and lessening of the work of the heart are achieved at the same time. In cardiac rheumatism in children it is probably easier to keep them quiet, and so to reduce the pulse rate, if they are compelled to lie down. In these cases, of course, heart failure is not necessarily present, but when complications such as pericarditis and its associated pulmonary changes are present it is then necessary for the patient to be kept well propped up.

Inheritance of Werdnig-Hoffman Disease

Q.—*A couple with no trace of consanguinity had a son, in 1941, who died at five months of progressive spinal muscular atrophy. Another son died in 1943, again at the age of five months, of the same complaint. There is no family history of any neurological disorder. What are the chances of a third pregnancy ending similarly?*

A.—Progressive spinal muscular atrophy (Werdnig-Hoffman disease) is recessive, and the chances of the next child having it are one in four. The fact that the first two children died of it does not affect the chances any more than the fact that a tossed coin landed head up twice will affect the probability that a third toss would give a different result.

Cure of Syphilis

Q.—*If syphilis is diagnosed at the stage of the primary chancre, can the patient be guaranteed a cure? Would you outline briefly the accepted modern method of treating syphilis, and state whether there is unequivocal evidence that such treatment, if carried out thoroughly, does in fact cure the condition.*

A.—Much depends on whether treatment is initiated before the serum reactions have become positive. In sero-negative primary syphilis *adequately treated* there is at least a 95% chance of cure; in the sero-positive stage it is somewhat lower. Approximately 25 g. of neoarsphenamine and 10 g. of bismuth metal, given over a period of about a year, will bring about cure in the majority of cases of early syphilis, provided that treatment is administered regularly and that the patient does not exhibit intolerance to the drugs. The earlier treatment is started, the greater the probability of cure. Recently penicillin, in a total dosage of about 2,400,000 Oxford units, has given remarkable results, but some arsenic and bismuth should be given as well—say twelve injections of each—to be on the safe side; it is too early as yet to say whether permanent cure will result. It is assumed that by "cure" is meant negative serum reactions and absence of signs and symptoms over a period of many years.

INCOME TAX

Future Sale of Car

M. C. proposes to buy a new car for, say, £400. He points out that in two years' time it may have to be sold at a normal price much lower than present prices would suggest, and asks whether in the event of its being then sold for, say, £100, he would receive the full amount of his loss as a deduction for income-tax purposes.

*** Yes. The deduction can then be claimed as a "balancing allowance" under Section 17 of the Income Tax Act, 1945—provided that that Act comes into force as from April 6, 1946, the date specified in the Finance Bill now before Parliament.

Free Residence

C. H. contemplates accepting employment on terms that he receives £700 and in addition occupies rent free a furnished house belonging to his employer. He inquires as to the position generally, and asks what expenses he can claim.

*** The gross amount of liable income will be £700; the benefit of free residence will not be taxable as he will (presumably) have no right to let the furnished house. Expenses can be claimed to the extent that they are incurred "wholly, exclusively, and necessarily in the performance of the duties of the office." For example, the cost of running a car can be claimed—subject to a reasonable deduction from the total cost in respect of private use—but the monthly instalments paid for the purchase of a car are "capital" payments and cannot be claimed for income-tax purposes. As patients are not seen at the residence there is little if anything that can be claimed for the cost of having someone on the premises to attend to callers, telephone messages, etc.

Travelling Expenses

A. L. is an R.M.O. whose duties as such comprise treatment of out-patients in a near-by town. This involves travelling 56 miles a week; no travelling expenses are borne by the hospital authority. Can he claim an allowance for such expenses?

*** Yes. This is apparently a case in which the duties of a single employment have to be exercised in two places, and the cost of travelling between them is necessarily incurred in performing the duties of that office or employment. Train fares would be allowable. If a car is used the amount to be claimed is a reasonable proportion of the running costs, including insurance, licence, etc. The usual basis of estimation is the mileages of the personal and professional use respectively.

Payment in Lieu of Residence

G. H. has accepted an appointment at a salary plus £100 in lieu of residence, and asks whether the £100 is liable to income tax?

*** Yes, it is liable. The practice as to lodging and provision allowances in the Forces—i.e., to regard such allowances as not being taxable—does not extend to civilian allowances of a similar nature. Judicial dicta on the point are such as to render hopeless an appeal based on the law as it stands. The fact that the recipient of the allowance may be maintaining his family elsewhere does not affect the question.

Acquisition of an Additional Practice

J. H. has owned practice A for many years, and purchased practice B as from April 1, 1944. The net profits of the two practices for the year to April 5, 1945, were respectively £282 and £326, and a combined assessment has been made for 1945–6 (on the normal previous year's basis) of £608. In addition an assessment has also been made for 1944–5 on the amount earned in that year from practice B. Is this correct?

*** Yes. The operation of the previous basis is apt to be confusing unless it is borne in mind that it applies not to the income of the individual but to the source of the income. In the first year of ownership of the source there is no "previous year" and the income is assessable on the basis of the current year. Thus in 1944–5 J. H. had two sources of income, A and B; his earnings from the old source (A) were chargeable to tax on the *previous* year's basis, but the income from the new source (B) is liable on the *current* year's basis. When the second year arrives both sources are chargeable on the previous year's basis, and the amount of the first year's profits of the new practice accordingly appears twice in the assessments. But the tax on that amount is paid for different years. Appearances notwithstanding, there is no true double assessment; J. H. had the income from both sources for 1944–5, and equitably tax is due on the combined amounts for that year as well as for 1945–6.

LETTERS, NOTES, ETC.

A Case for Diagnosis

Fl.-Lieut. G. A. POWELL-TUCK writes: When stationed near Karachi, N.W. India, the following case presented signs which to me were unique and interesting, and I hope that some reader will be able to suggest the diagnosis. On Dec. 24, 1944, an officer obviously very concerned showed me the front of his right forearm. One inch above the wrist and on the flexor aspect there was an inflammatory area the size of a five-shilling piece, and in the centre of it a tiny perforation the size of a pinhead. The interesting point was that from the small perforation exuded a blue colouring matter identical with that which is produced when an indelible pencil has been moistened with water. The history given was that the officer while drying himself after taking an improvised "bath" had been bitten by something. He was treated for mild shock while a thorough search was made in his quarters for spiders, scorpions, etc., but without success. Hot saline fomentations were applied every four hours for 48 hours, and he was kept under observation each succeeding day for five days. As the condition remained unaltered bacteriological investigation was carried out at the nearest hospital. This was negative. A few days later he was admitted for further observation, and discharged at the end of a week with the entire forearm encased in plaster-of-Paris. The case was removed on Feb. 9, 1945. The perforation had healed and there was no evidence of inflammation, but the blue colour, though less distinct, persisted. It was the general opinion that the condition had been self-inflicted, but later it was proved beyond doubt that this was not so, because the same condition arose on two subsequent occasions in two other officers. In each of these instances the same colour was seen but without the inflammation or central perforation.

Treatment of Warts

Mr. G. R. EMBY (chemist, Natal, S. Africa) writes: In connexion with a question under the heading "Multiple Warts" (Aug. 25, p. 271), may I recall a reference which may be of some assistance. I refer to an article, "'Tips' (for G.P.s only)," by Dr. J. F. Haegert, which appeared in the *South African Medical Journal* (1942, **16**, 38). The tip as regards warts is the consumption of 1/2 pint of lime-water daily for one week. Incidentally syrup is used a great deal in South Africa for external application to warts on cattle. Might not doses of calcium saccharate, perhaps with vitamin D, be of some help in the treatment of warts on humans?

Morphine Prophylaxis of Paralytic Ileus

Dr. H. L. MACKINTOSH (Troon) writes: The writer of the article on prophylaxis of paralytic ileus by administration of morphine (Oct. 20, p. 528) may be interested to know that in Dr. Clarke's (homoeopathic) *Dictionary of Materia Medica* ileus is given as one of the indications for the use of opium in homoeopathic dosage. One of its indications is given as: "Peristaltic action entirely suspended; even reversed peristalsis with faecal vomiting." Undoubtedly they are dealing here with the Arndt-Schulz law on poisons, which says that substances which in large doses kill the cell, in smaller doses inhibit its action, and in smaller doses still actually stimulate. And also what may in one person be sufficient to inhibit in another merely stimulates. Who has not seen labour pains in a tired patient roused to violent activity by a small dose of morphine when the intention was to procure rest and sleep; or the patient who is thoroughly roused by a dose of morphine given to procure sleep?

Longevity

Mr. ALFRED TILLING writes: With reference to the query put by Prof. Major Greenwood in his letter (Nov. 3, p. 624) as to the "impossibility or improbability" of a human being living to the age of Methuselah, a recently published autobiography by an English peer gives an account of a speech made by another well-known nobleman on the occasion of his golden wedding. He said: "I must tell you that I experienced rather a shock the other day. In the course of my researches connected with a fixed Easter and calendar reform I was rather surprised and horrified to find that I was two years older than Methuselah. He apparently belongs to an era when lunar months were counted years. So instead of living 969 years, Methuselah was only 79 when he was cut off. Abraham and Isaac, who lived in an era when about 5 months went to the year, were only 72 and 74." Most Bible students would agree with the foregoing. Only people with a certain amount of scientific knowledge, and with the art of writing, would be able to record "birthdays." With people of primitive culture there was, and is, no time measure other than the moon and the seasons. The meaning of "season" or "year" varies in different parts of the world if based on husbandry or agriculture. In a territory where there are "the former and the latter rains" there may be said to be a "six-months year," and the "time-rules" of the days of the patriarchs of Genesis differ materially from our present calendar. A two-shilling booklet entitled *The Genesis Mosaic*, by Cullen Young (issued by the Religious Education Press, Wallington, Surrey), deals with the subject and is well worth reading.

Dr. P. B. CRONE (Norwich) writes: The problem of the possibility of surviving to 150 years discussed by Prof. Major Greenwood (Nov. 3, p. 624) may be looked at from a slightly different angle. Taking q_x to be constant at 0.5 for ages over 90, more than 5×10^{17} persons of 90 years would need to be observed to make the chances even of at least one of them attaining the age of 150 years. To accumulate such a number with a birth rate of 30 and a world population of 2×10^9 would require 3×10^{11} years, assuming that 1 in 40 infants lives to 90 years. The number of survivors at ages over 90 might be given by the formula:

$$\text{Survivors} = q^n \times P$$

where q = probability of dying in one year, n = years over 90, and P = survivors 90 years old. But it is unlikely that sufficient annuitants can be collected to distinguish between this formula and

$$\text{Survivors} = \left(q^n - \frac{n}{60} q^{60}\right) P$$

unless considerable numbers could be observed at ages over 140, or indeed a single person survived to 150 years. Yet this second formula, though not appreciably affecting survival at ages up to 140, would imply that it was impossible to reach 150 years.

Corn in Egypt

Dr. LOWELL WEBB writes: The annotation "Whose Loaf?" (Dec. 15, p. 853) states that the first civilization was made possible because "wheat grew naturally in the Nile Valley." Surely this is incorrect? Wheat never grew wild in Africa, but it did in South-West Asia, especially Mesopotamia, Syria, and Palestine. It was barley which grew naturally on the banks of the Nile in Upper Egypt—a grain which matures early, needs less water than any of the other cereals, and is suited to a rainless country dependent upon river inundation for its water supply: the oldest food—and drink—of the human race. Wild wheat, as emmer, was probably imported into Egypt from Palestine, and later the superior type of bread-wheat, but it took about seven hundred years for it to supplant the original barley. Presumably the "Battle of the Loaf" was not unknown in those days. It is interesting to recall that it was from Palestine—the cradle of the wild cereals—that the historic party of ten brethren was forced to set out, in a time of famine, to search for the product of their own homeland—"Corn, in Egypt."

Fat Atrophy and Insulin Injections

Dr. E. S. FENNELL (London, W.) writes: Further to the answer on fat atrophy and insulin injections (Nov. 3, p. 633) I would suggest, in addition to giving the injections at different sites, giving the needle a more or less perpendicular direction and injecting the insulin below the fatty layer. This seems to be the only possible escape from the fat atrophy which follows these injections in those people who are sensitive to them.

Sale of U.S. Government Publications

History was made at a brief and modest meeting held on Nov. 20 at His Majesty's Stationery Office, Kingsway, London, under the chairmanship of Sir Norman Scorgie, Controller of the Stationery Office and King's Printer. The American Ambassador, Mr. John G. Winant, officially inaugurated the sale of American Government documents in England, a service which he described as unprecedented between nations, enabling any person in the United Kingdom to order any publications of the United States Government Printing Office through his local bookseller. Subscriptions to U.S. official periodicals (including several in the fields of medicine and public health) will also be accepted at York House for supply direct from the United States. In this connexion we remind readers that Mr. A. B. Toth, on leave from the Library of Congress, has been appointed acting director of the American Library, 1, Grosvenor Square, W. (library hours 9–7, except Saturdays, 9–1), being also attached to the Embassy as publications officer, representing the Federal Libraries, including the Army Medical Library, in Washington, with a view to facilitating exchange of publications between corresponding institutions. Mr. Toth is likely to be in London for a year at least.

Corrigendum

The report in the *Journal* of Dec. 8 (p. 814) refers, with the exception of the first three lines, to the Bristol Hospitals Fund, and should have been so headed; its membership exceeds 58,000. The Bristol Hospitals Provident Fund, a scheme for assisting persons of moderate means to meet the cost of illness, was inaugurated in March of this year and already has a membership of nearly 2,000.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL

LONDON SATURDAY JUNE 30 1945

MEDICAL CANDIDATES FOR PARLIAMENT

The following, so far as can be ascertained, is a list of the 30 medical men and 3 medical women who are standing at the General Election. The names of those who were members of the last Parliament are indicated by an asterisk. It is not possible in all cases to give the age of the candidates, but the year of their qualification affords some guidance, and this has been inserted, in parentheses, in the few appended biographical notes.

Reginald F. B. Bennett, Woolwich E., Conservative.

(1937). Surg. Lieut.-Cmdr., R.N.V.R. Formerly demonstrator of anatomy at Oxford, later assistant medical officer, Maharaja and State of Rajpipla.

L. Graham Brown, Luton, Liberal National.

(1915). Born in Brisbane. Served throughout 1914–18 war. Now surgeon, Ear, Nose, and Throat Department, Charing Cross Hospital; and president, Section of Otology, Royal Society of Medicine. Early prowess in athletics; captain, England Rugby XV.

Leonard F. Browne, Penrith and Cockermouth, Labour.

(1909). Served in R.A.M.C. as specialist in psychological medicine. Physician, Tavistock Clinic. Closely associated from beginning with Toc H.

Louis Comyns, Silvertown, Labour.

(1932). Received medical training in Scotland. Practises in East London.

***James Douglas Cooke**, Hammersmith S., Conservative.

(1902). Received medical training in Australia, and held appointment in Melbourne Hospital. Served in R.A.M.C. in France in first European war. Formerly practised at Stanmore, now retired. Member, Middlesex County Council. Represented Hammersmith S. in Parliament since 1931. Knighted in recent honours list.

*Rt. Hon. **Walter E. Elliot**, Kelvingrove, Conservative.

(1913). Was Minister of Health 1938–40, and had previously been Secretary of State for Scotland and Minister of Agriculture. Served first European war; gaining *M.C.* and bar. Has represented his Glasgow division since 1924.

G. A. D. Gordon, Richmond, Liberal.

(1931). Major, R.A.M.C.

*Sir **Ernest Graham-Little**, London University, Independent.

(1892). Consulting physician, Skin Department, St. Mary's Hospital. Member of Senate, University of London, since 1906, and of Court since 1929. Represented the University in Parliament since 1924.

***Leslie Haden Guest**, Islington N., Labour.

(1909). Served in South African and first European wars (*M.C.*). Has travelled much as a member of inquiry commissions and in other capacities. Founder of Anglo-French Committee of Red Cross and Order of St. John. Formerly member for Southwark N., and has represented Islington N. since 1937.

Bernard Guyster, Leyton W., Liberal.

(1926). General practitioner in Leyton. Member, Essex County Council and Insurance Committee.

Somerville Hastings, Barking, Labour.

(1902). For many years surgeon-in-charge, Ear, Nose, and Throat Department, Middlesex Hospital. Lately chairman of London County Council and previously chairman of its Hospitals and Medical Services Committee. Has been president, Section of Otology, Royal Society of Medicine. Formerly represented Reading in Parliament. A leading figure in the Socialist Medical Association.

Joseph John Hayward, Abertillery, National.

(1942). Surg. Cmdr., R.N.V.R. Formerly house-surgeon, obstetrical and gynaecological unit, and junior resident anaesthetist, Cardiff Royal Infirmary.

Charles Hill, Cambridge University, Independent.

(1927). Secretary, British Medical Association, since January, 1944, previously Deputy Secretary. Vice-president and formerly chairman, Central Council for Health Education. Member, Minister of Health's Medical Advisory Committee and Minister of Labour's Industrial Health Advisory Committee. Formerly deputy M.O.H., Oxford. Well-known broadcaster.

Elizabeth Jacobs, St. Marylebone, Labour.

(1925). Practising in West London. Formerly clinical assistant, Elizabeth Garrett Anderson Hospital.

Santo Wayburn Jeger, St. Pancras S.E., Labour.

(1923). Practises in North London and has taken a prominent part in local government in Shoreditch; chairman of Public Health Committee.

Eric Frederick St. John Lyburn, Tonbridge, Independent.

(1930). Practises at Tunbridge Wells. Active member, East Sussex Medico-Chirurgical Society.

***Robert Douglas MacIntyre**, Motherwell, Scottish Nationalist.

(1938). Practises in Edinburgh. Entered Parliament after recent by-election.

Guy Chandler Milner, Orpington, Independent.

(1926). Practises in the Orpington and Sidcup area of Kent. Lecturer and examiner, British Red Cross. Medical officer to several insurance companies.

***H. B. Morgan**, Rochdale, Labour.

(1909). War service 1914–19. Advisory medical officer, Union of Post Office Workers, and adviser and consulting specialist, industrial diseases, Trades Union Congress. Member B.M.A. Council and has served on many headquarters committees. Member for Rochdale since 1940; previously sat for Camberwell N.W.

*Sir **Henry Morris-Jones**, Denbigh, Liberal National.

(1906). For more than 20 years a general practitioner at Colwyn Bay. Former chairman of the local B.M.A. Division. M.P. for Denbigh since 1931. Former Junior Lord of the Treasury and Government Whip.

David Stark Murray, Richmond, Labour.

(1925). Pathologist, Kingston Laboratory E.M.S., and honorary pathologist, Royal Hospital, Richmond, and associated hospitals. Prominent in Socialist Medical Association. Editor, *Today and Tomorrow*.

***Basil H. H. Neven-Spence**, Orkney and Shetland, Conservative.

(1911). Served much abroad, in Egypt and the Sudan and in Palestine. Formerly specialist physician, Aldershot Command. Retired 1927. M.P. for Orkney and Shetland since 1935.

*Sir **John Boyd Orr**, F.R.S., Scottish Universities, Independent.

(1912). Director, Rowett Institute, Aberdeen, and Imperial Bureau of Animal Nutrition. Chairman of B.M.A. Charter for Health Committee. Joint Editor *Nutrition Abstracts and Reviews*. Author of works, including *The National Food Supply* and *Food, Health, and Income*. Member of several Government Committees. Entered Parliament at recent by-election.

William Bernard Joseph Pemberton, Bermondsey W., Liberal National.

(1920). Received medical training and held early appointments in Dublin. Now practises in Bermondsey. Public vaccinator in that borough. Now candidate for the seat from which Dr. Alfred Salter (Labour) has retired.

Samuel Segal, Preston, Labour.

(1927). Squad. Ldr., R.A.F. Formerly on junior staff of Westminster Hospital.

Dorothy Anderton Sharpe, Chelsea, Common Wealth.

(1930). Assistant gynaecological surgeon, Elizabeth Garrett Anderson Hospital, and assistant obstetrical surgeon, Royal Free.

R. Scott Stevenson, Fife W., Liberal National.

(1912). Served during the war as otologist to a military hospital, major, R.A.M.C. Surgeon, Metropolitan Ear, Nose, and Throat Hospital; consulting laryngologist L.C.C. Hospitals. Formerly Joint Editor *Practitioner*. Has served on B.M.A. Council and many headquarters committees.

Malcolm Stoddart-Scott, Pudsey and Otley, Conservative.

(1926). Educated at the University of Leeds. Col., A.M.S.(T.), A.D.M.S., 48th Division, Territorial Decoration. Assistant medical officer, V.D., Department, General Infirmary at Leeds.

Barnett Stross, Hanley, Labour.

(1925). General practitioner, Stoke-on-Trent. Medical adviser, Pottery Workers Society and North Staffordshire Miners Federation.

***Edith Clara Summerskill**, Fulham W. Labour.

(1924). Medical director, Birth Contro Clinic, West Fulham. M.P. since 1938 Prominent member of Socialist Medica Association.

Halliday Sutherland, Scottish Universities Labour.

(1906). Ex-president, Tuberculosis Society Author, *Pulmonary Tuberculosis in General Practice* and several other works including two volumes of autobiography

Stephen J. L. Taylor, Barnet, Labour.

(1934). Head of Home Intelligence Ministry of Information. Neuropsychiatric specialist. Formerly hon. secretary Osler Club, and assistant editor, *Lancet*.

***William Stanley Russell Thomas** Southampton, Liberal National.

(1919). Barrister-at-law, Lincoln's Inn Formerly assistant medical officer. Wes Riding Asylum, Wakefield. M.P. fo Southampton since 1940.

HEALTH POLICY OF LABOUR AND LIBERAL PARTIES

In his "Appeal to the People" last week-end Mr. C. R. Attlee made no specific reference to health services, but reaffirmed his Party's acceptance of the principles and policy set out in its declaration of policy entitled *Let Us Face the Future*, published earlier this year. This declaration contained the following under the heading "Health of the Nation and its Children":

> "By good food and good homes much avoidable ill-health can be prevented. In addition the best health services should be available for all. Money must no longer be the passport to the best treatment.
>
> In the new National Health Service there should be health centres where the people may get the best that modern science can offer, more and better hospitals, and proper conditions for our doctors and nurses. More research is required into the causes of disease and the ways to prevent and cure it.
>
> Labour will work specially for the care of Britain's mothers and their children—children's allowances and school medical and feeding services, better maternity and child welfare services. A healthy family life must be fully ensured and parenthood must not be penalized if the population of Britain is to be prevented from dwindling."

The Liberal Party, in its 20-point manifesto to electors, sets out its views on health in the following terms:

> "People cannot be happy unless they are healthy. The Liberal aim is a social policy which will help to conquer disease by prevention as well as cure, through good housing, improved nutrition, the lifting of strains and worries caused by fear of unemployment, and through intensified medical research. The Liberal Party's detailed proposals for improved health services would leave patients free to choose their doctor, for the general practitioner is an invaluable asset in our social life."

POSTGRADUATE EDUCATION OF SERVICE MEDICAL OFFICERS

The Department of Health for Scotland announces the following addresses to which medical officers on release from the Services should apply for information and advice about postgraduate facilities in Scotland:

St. Andrews: Prof. Tulloch, Dean of the Faculty of Medicine, Medical School, Dundee. Tel. No. Dundee 3686.

Aberdeen: Prof. R. S. Aitken, Department of Medicine, Foresterhill, Aberdeen. Tel. No. Aberdeen 6060.

Edinburgh: Prof. Sydney Smith, Dean of the Faculty of Medicine, University New Buildings, Edinburgh, 8. Tel. No. Edinburgh 41001. (Also acting as central office for Scotland.)

Glasgow: Prof. J. Hendry, Department of Obstetrics and Gynaecology, The University, Glasgow. Tel. No. Glasgow Western 3991.

The corresponding addresses for England and Wales were published on June 23, p. 125.

HEARD AT HEADQUARTERS

Increased Litigiousness

Are patients becoming more litigious? It appeared so from the analysis given by the treasurer, Mr. W. M. Mollison, at the annual meeting of the London and Counties Medical Protection Society the other day. Last year the legal costs in defence of members were equivalent to 4s. 11d. per member, an increase of one shilling on the year before, and adverse costs and damages 6s. 4d. per member, an increase of 2s. 8d. These figures fluctuate from year to year, and one big case may make a great deal of difference, but they gave point to the terse counsel which the new president of the society, Sir Ernest Rock Carling, gave to the members.

One thing on which he insisted was that directly a case appears, so to speak, above the horizon the society should be informed. Many matters are referred to local solicitors before the society is consulted, and however well intentioned the solicitors may be, the subsequent action by the society may be prejudiced. He also deprecated settlements against the society's advice, saying that their experience was that such settlements were just as likely to prejudice a man's practice as an unsuccessful defence. Another point made by Sir Ernest was that if a practitioner saw occasion to vary the treatment he had proposed or discovered that he had made a mistake, he should frankly explain his action or his mistake to the relatives at once. Many actions, he said, would have been avoided if a simple explanation had been given at once. One thing brought out in the experience of the defence societies is that the practitioner of the greatest competence and skill, who takes the utmost care over his cases, is by no means exempt from peril. In two cases which the London and Counties has recently defended, and which cost it a great deal of money, Sir Ernest said that nothing but sympathy could be felt for the practitioners concerned, for the same misfortune might have happened to any one of themselves.

"The Family Doctor"

A "short," in film language, depicting the work of the family doctor, has lately been completed by Everyman Films, Limited, by arrangement with the Public Relations Committee of the B.M.A. It was shown to some members in the small theatre at the Ministry of Information on the day after the recent meeting of Council. It is restrained and dignified in its presentation, and both script and picture have been prepared with care so as to avoid the possibility that mischievous persons might hold it up to ridicule.

The question whether the film will be generally shown rests with the cinematograph trade houses, which determine how the greater part of the British public shall be entertained and instructed. The trade has, however, shown that it appreciates that in addition to its ordinary million-fold clientele, who would be faithful to their weekly pictures in any event, there is another world of infrequent cinemagoers who are attracted by serious and purposeful films. The welcome given to such films as that on the work of Madame Curie, and the earlier one depicting the achievements of Pasteur, shows that there is a public for such presentations. "The Family Doctor" is not as ambitious as these, but it is a sympathetic depiction, and an accurate one, not overlaid with sentiment, but really informing.

"Volims"

We live under the tyranny of initials, encouraged now more than ever by Army usage. Such monstrosities as U.N.R.R.A. and N.A.L.G.O. are pretty well understood, but what is V.O.L.I.M.S.? A booklet is before me, the product of the Volims Committee, and it deals with a plan for a regional consultant and specialist medical service based on university medical centres. "Volims" turns out to be a word made up from the arbitrarily selected initials in the phrase "Voluntary hospitals Of London which are Independent of undergraduate Medical Schools." But whether the name be happy or not, the plan propounded is one well worth studying. It proposes that the country be divided into university regions, and that there shall be one or more university medical centres in each region based on a central hospital. The university centre is to be the pivot for clinical units in all departments of preventive and curative medicine, but there is also to be a co-ordinator of research and a clinical co-ordination department. There are many other proposals much too big to be dismissed in a paragraph, but there is also a scheme, with which the name of Mr. H. E. Griffiths is associated, for a whole-time industrial medical service centred on the university. This is to be under the control of a director of industrial medicine and to comprise a team of industrial medical officers (and nurses) to be responsible for the supervision of the industrial health of the community. The director of industrial medicine, in collaboration with the dean of the medical school, would also be responsible for the teaching of industrial medicine. The address of the Volims Committee is 28, Portland Place, London, W.1.

Publicizing Local Government

A very interesting report by the Nalgo (National Association of Local Government Officers) Reconstruction Committee has come into my hands. It is full of ideas for making the proceedings of local authorities, including public health committees, of more general interest. It urges the appointment of public relations officers and the holding of press conferences. It is often complained that local authorities transact their important business in committees, and matters come before the council in public only for the rubber stamp. Nalgo does not exactly suggest that committee meetings should be open to the Press—it would not be advisable, for example, to have open meetings at which the claims of officers for promotion were discussed—but it does recommend that the minutes should be available for the Press, and that such minutes should be phrased with the Press and public in view.

In this connexion the practice of the L.C.C. seems to be admirable. The agenda of the council meeting contains reports of committees so extensive and complete that the Press has no difficulty in constructing a "story." Another suggestion is that more use should be made of the cinematograph film, both to inspire civic patriotism and to inform the public of the services available.

Correspondence

Medical Demobilization

SIR,—I am at present on a month's leave from over-seas, and have just received the Central Medical War Committee's circular letter, D. 11, of May, 1945.

I have been away from England for over three years; during these years I have worked nearly as hard as I would have in civilian life; the work has been interesting and, I think, useful (in this respect I have been luckier than some of my colleagues). Now, however, after taking three months to reach England for my leave I have before me the prospect of a return to my Army duties for a few more months before I *should* be demobilized or before I am posted to U.K. under the "Python" scheme. In other words, I, like thousands of others, am facing an immediate future of comparative idleness in the performance of duties which could well be carried out by a man twenty years my senior. Not unnaturally this becomes increasingly irksome when the local population of the district in which I practised for two years before the war is crying out for more doctors, and when my practice is, inevitably after so many years' absence, disintegrating before my eyes.

I do not write this letter, however, for any personal reasons. I merely mention my own circumstances so that, multiplied thousands of times, they may serve to impress upon the committee in particular and non-Service doctors in general that a tide has been reached in the affairs of Service medical personnel which, if not taken now, must lead very shortly to extreme financial misfortune and general discontent.

Doctors in the Services, and especially those over-seas, have had the subject of demobilization very much in mind in the last six months or more. We have wondered what was being done on our behalf to make this as speedy as possible; what arrangements were being made to replace us (if necessary) and to help us with the post-war training which we so sorely need. We are not unreasonable or unduly impatient, and we are content to carry on with our Service duties, however unnecessary and irksome they may appear to us (and most of them could be quite adequately performed by third-year medical students in four hours' work a day, or by non-medical administrative officers), providing we are assured that arrangements for our demobilization are well in hand, adequate, and just.

Regrettably I must confess that, so far as I am concerned at any rate, the committee's letter has given us no such assurance. On the contrary, six years after mobilization and one month after the cessation of hostilities in Europe, we are given no concrete and established policy, no facts or figures relating to the mobilization of our colleagues in civilian life, and no final answers to the questions with which we are most concerned. In their stead we have intentions and promises with regard to mobilization and demobilization, and apologies for the inadequacy of the present postgraduate training scheme. In other words, we still would seem to be in the stage of words and not deeds. I do not wish to be unfair to the committee, whose work on our behalf has been and is appreciated; may I, therefore, give some detailed reasons for the views which I have expressed above.

First, about demobilization: one of the main queries of Service personnel has been, "Does the Government's scheme for the reallocation of man-power apply also to doctors?" The committee gives no answer. One may presume that it does not, for the committee *believes* that if the scheme could be made to apply to doctors we would ask no more than that. Such an assumption is, I think, correct, but surely after six years we have a right to expect more than the belief in a possibility.

Next we ask the committee, "Since demobilization under Scheme 'A' is not expected to be as satisfactory or prompt for medical officers as for those employed in other branches of the Services, what alternative or additional measures are suggested?" This question is answered, for we are told that the key to the problem lies in the recruitment of civilian doctors. Hopefully we look for evidence of action in this respect, and we find that this, too, is in the "intention" stage.

May we be forgiven if we find it difficult to let this matter rest? Doctors in the Services consist in the main of young men recruited from hospitals immediately after qualification, a restricted period "on the house," or a year or two in general practice, together with the younger consultants and those who were training for a specialist career. Almost without exception these men have given what are usually considered to be the best and most important years of their lives to the Services in return for a mere pittance of a salary compared with what they would have earned had they not joined up; in addition they have seen their practices dwindling sadly and their clinical knowledge and experience neglected; some have been permanently disabled and others have given their lives. These do not ask for the sympathy of the committee or to be told that the difficulties and hardships they have suffered are well known, but they have the right to compare their lot unfavourably with that of their colleagues who have remained in civilian life. These latter may have been carrying "almost intolerable burdens" and been "worked to death" (in the words of the committee), but they have also (not in the words of the committee) lived their lives with their wives and families and in their own homes, earned salaries in excess of their peacetime incomes, and maintained or increased their practices (one hesitates to say that this latter has been at the expense of their Service colleagues, but the well-intentioned B.M.A. Protection of Practices Scheme seems, almost inevitably after so many years, to have had disappointing results). In addition, there are those among them who did not join the Services because of "local requirements," which, being interpreted, means that some of their colleagues, of like age or younger, joined up before them.

The committee is right when it assumes that we have never expected equal sacrifices for all; it is now for the committee to prove that we are wrong in our assumption that the sacrifices have been to date, and will be in the future under present arrangements, mainly one-sided. It is our contention that young (or once young) medical officers who now spend idle hours in static units or in the military administration of occupied territories, whose practices are "dwindling sadly" in their absence (a mild term, one feels), whose clinical experience has been seriously yet unavoidably neglected, and whose families and homes know them only as strangers, should be replaced by their colleagues in civilian life under, say, 45 years of age. These latter are more suited for the sedentary employment now offered by the Services, and should be prepared to spend a few months away from their practices and their families. The committee may rest assured that Service doctors are only too willing and anxious to bear the intolerable burdens of civilian practice and know that their only chance of survival lies in working themselves to death after demobilization.

No civilian doctor and no Service medical officer is irreplaceable; let each, therefore, replace the other. This, then, is our next question to the committee: "How many civilian doctors have *already* been mobilized as replacements for Service medical officers? What action (in detail) is being taken to obtain these replacements, and is the selection being made purely on the advice of committees composed of local practitioners and consultants? Why does the committee 'intend' to call up these practitioners: has it not had time to put its intentions into practical effect?"

So much for mobilization and demobilization. I would refer now to a further problem to which the committee does not give a satisfactory answer—the general dissatisfaction felt by Service medical officers at the conditions attached to demobilization under Class "B." Is it not grossly unjust that doctors released from the Services at the request of local committees and because of local needs should be expected to sacrifice the leave with pay which is their due? I refer here especially to those with oversea service who, in addition to the eight-weeks normal grant of leave on demobilization under Class "A," receive one day's leave for every month of service abroad—few would take the leave but many would be grateful for the pay when settling into their practices again or starting on a post-war career.

The committee appears to accept this exploitation as a necessary evil; is action already being taken to modify or remove this injustice?

On the subject of postgraduate training one can only join with the committee in deploring the inadequacy of the two-weeks "refresher" course offered to Class 2 medical officers. Most of us reckoned that the first three months after demobilization would have to be set aside for postgraduate training (we owe it to our patients and the Government owes it to us), and it is only fair to suggest that the cost of such a course should be borne by the Government. Presumably, if such a course is persisted in under present arrangements the cost, as usual, will have to be borne by the individual. The idea of giving up two days a week from one's practice is, of course, laughable. The salary offered to Class 1 medical officers (who are now six or more years older than when they enlisted) will drive many of them into practice without any postgraduate training; few with families and homes to maintain will be able to afford such a course under post-war conditions.

Finally, those over-seas and thousands of miles from their practices would feel more satisfaction if the local requirements for doctors were assessed and applications for demobilization judged in the first place by committees consisting not only of local practitioners and consultants but also, in part, of medical or non-medical officers from outside the district. Similarly, one would like to be assured that the Services are represented on the Central Medical War Committee (and I do not mean only by specialists in uniform).

and that it is not entirely civilian in its representation.

I have given my views as frankly as I am able; they have been modified or extended as a result of conversations I have had with all classes of medical officers during my long journey home. If I have been guilty of under- or over-statement or of any serious omissions I hope that my Service colleagues will correct me without delay (and in this respect I fully realize that I have glossed over the consultant's point of view, and he may be the worst sufferer of us all). I would repeat that we are grateful for the Central Medical War Committee's efforts on our behalf, and are not unmindful of the difficulties it has had to overcome and with which it is still faced. I hope we shall not be considered guilty of ingratitude or impatience if, in desperation at this stage in the war, we ask for results and not promises, just treatment and not apologies.

If, in fact, this letter appears to be petulant or over-critical in its nature, may it please be regarded as a direct result of the perturbation and dismay aroused in a "foreigner" by the contemplation of an immediate future represented by mere hopes and intentions as outlined by the Central Medical War Committee's letter under discussion.—I am, etc.,

RONALD GIBSON,
Lieut.-Col., R.A.M.C.

*** The Secretary of the Central Medical War Committee writes: The Central Medical War Committee is still awaiting complete information as to the medical officers in the earlier release groups whose release will or will not depend on replacement. It is necessary to know which officers will be returning, with or without replacement, to the various localities and which have elected to serve for a further period. As this information is received the committee will carry out with the least possible delay the intentions stated in its recent circular. Meantime, the recruitment of younger practitioners, including men of graded specialist status in B1 hospital posts, is proceeding continuously.

As regards sacrifice of benefits when an officer is released out of turn, the committee is advised that it is not possible to alter, in the special case of medical officers, a policy which affects members of the Services generally. Often a man will gain by earlier release, and in no case will a man be released out of turn without his consent. As the circular explained, the salary in Class 1 of the postgraduate scheme will be supplemented when necessary by a grant under the Further Education and Training Scheme. There should be no question of a released officer with family commitments being unable to take advantage of the scheme through lack of means.

The C.M.W.C. is necessarily a civilian committee, and the only Service representatives are members of the staffs of the Service Departments, who attend as observers. Serving soldiers take no part in the recruitment of non-medical personnel. It is not clear why there should be a different rule in the case of doctors; nor what advantage would be gained at this stage by altering the composition of Local Medical War Committees.

Demobilization of Final-year Students

SIR,—When called up a year ago I was a final-year medical student at a London hospital, within ten months of qualification. My progress was considered by my tutors to be satisfactory and promising. I was nevertheless called up, the reason being that I had been de-reserved *two years* previously for failure to pass one of my examinations within the prescribed time-limit. I was, however, successful in this examination at the next attempt.

The present shortage of doctors in the country is apparently causing concern to the medical profession. Would it not, therefore, appear to be sound policy to release final-year students under Class "B" and so enable them to qualify and, if necessary, return to the Forces in their true and more useful capacity in about twelve months' time? I myself am no longer of medical category A1, and there is, therefore, no job in the Army for me which could give greater service to the country than that of completing my qualification as a doctor.

There must be a considerable number of fairly advanced students in the Forces, most of whom will not obtain their release under Class "A" arrangements for at least another year, or perhaps two. By that time the majority will have decided that the difficulties of returning to study are too great after so long an enforced abstinence therefrom, and will be lost to the ranks of the profession for ever.—I am, etc.,

"INFANTRY PRIVATE."

H.M. Forces Appointments

ARMY

Lieut.-Col. H. A. Sandiford, M.C., from R.A.M.C., to be Col.

ROYAL ARMY MEDICAL CORPS

DEATH

CLARKE.—On June 18, 1945, at 1, Makepiece Avenue, Highgate, N., Dr. Leo F. Clarke, after a short illness.

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.
B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.
A—Whole-time resident house appointments open to practitioners without previous experience.
B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with the Indian Medical Service for the duration of the war. Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a maximum period of 6½ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay, etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office, to whom all inquiries should be addressed.

SOUTHERN RHODESIA. GOVERNMENT HEALTH OFFICER.—Applications are invited from registered male medical practitioners holding the D.P.H. or a registrable degree in State Medicine, for appointment as additional Government Health Officer in the Public Health Department of Southern Rhodesia. Experience in tropical medicine or tropical hygiene or the possession of a diploma in either of these subjects is desirable. The duties appertaining to the appointment consist of administration of the Public Health Act and other public health legislation throughout the Colony, investigation of health conditions of the population, promotion of schemes for preventing disease and augmenting health, advising and assisting local authorities in public health matters, supervising the work of a large staff of European Sanitary Inspectors, the preparation of reports and statistics relative to public health, and health education. Applicants should preferably not be over 40 years of age. The successful applicant will be stationed either in Salisbury or in one of the larger centres where health conditions and educational facilities are eminently suitable for the family of a married man. The duties of the post will incur a certain amount of travelling from time to time, the cost of which will be paid by the Government, and subsistence will be paid during the officer's absence from his station in accordance with Civil Service Regulations. The salary will be on the scale £1,000 per annum, rising by £50 per annum to £1,250 per annum, and will commence from the date of assumption of duty in Southern Rhodesia. Leave and pension conditions are in accordance with Civil Service Regulations. The successful applicant will be required to pass a medical examination in London before his appointment is confirmed, and to serve a probationary period of two years' service before being admitted to the Fixed Establishment. A free steamship passage to Cape Town and first-class railway ticket thence to Southern Rhodesia will be provided. Canvassing directly or indirectly will disqualify applicants. Applications should reach the office of the High Commissioner for Southern Rhodesia, Rhodesia House, 429, Strand, London, W.C.2 (from whom further particulars and application forms may be obtained), not later than July 7, 1945.

ADMINISTRATIVE COUNTY OF ESSEX.—The County Council invite applications for the engagement of a TEMPORARY PART-TIME PAEDIATRICIAN. The successful applicant must be prepared to work in any part of the County as required and, in particular, to undertake consultations in connexion with: (a) the County Council's Maternity and Child Welfare Services generally; (b) the County Council's School Medical Services; (c) the treatment of all sick children in County Council Hospitals, as required; (d) urgent and acute cases of illness amongst children in regard to whom general practitioners desire advice. Remuneration at the rate of £750 a year, together with war bonus as decided by the Council from time to time, will be paid for this engagement, in respect of which first-class railway fares will be reimbursed, or a motor-car allowance, based on the County scale, will be granted. Additional information concerning duties to be undertaken can be obtained from the County Medical Officer of Health, County Hall, Chelmsford. Applications containing full information as to the applicant's position in relation to military service should be addressed to me in envelopes endorsed "Consultant Paediatrician." Canvassing, directly or indirectly, is forbidden. This advertisement is published with the approval of the Minister of Health. —John E. Lightburn, Clerk of the County Council, County Hall, Chelmsford.

ADMINISTRATIVE COUNTY OF ESSEX. MEDICAL STAFF.—The County Council invite applications for the following appointments at the Oldchurch County Hospital, Romford.

(i) TEMPORARY RESIDENT CASUALTY OFFICER (B1), with some surgical experience. Salary £350 by £25 to £450 a year, plus residential emoluments valued at £160 a year and war bonus. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R and W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C.

(ii) TWO TEMPORARY RESIDENT JUNIOR ASSISTANT MEDICAL OFFICERS (B2). Salary in each case £200 a year plus residential emoluments valued at £160 a year. R and W practitioners now holding A posts may apply. If held by an R or a W practitioner the appointment will be limited to six months, otherwise it will be for a period of one year.

Details of duties can be obtained from the Medical Superintendent of the Hospital.

All applications should be addressed to Mr. G. E. Pegram, Administrative Offices, Laurie Square, Romford.—John E. Lightburn, Clerk of the County Council, County Hall, Chelmsford.

ADMINISTRATIVE COUNTY OF ESSEX. RELIEF WHOLE-TIME TUBERCULOSIS OFFICER.—The County Council invite applications from registered medical practitioners to undertake holiday duty for their whole-time Tuberculosis Officers during a total period of not more than five months. Applicants should be capable of interpreting x-ray films of the chest and be able to give artificial pneumothorax refills. Inclusive remuneration at a rate of £750 a year will be paid for this engagement, in respect of which first-class railway fares will be reimbursed or a motor-car allowance, based on the County scale, will be granted. Candidates already in whole-time public health employment not eligible for engagement. Canvassing, directly or indirectly, is forbidden. This advertisement is published with the approval of the Minister of Health.—John E. Lightburn, Clerk of the County Council, County Hall, Chelmsford.

STATES OF JERSEY, General Hospital.—Applications are invited from duly qualified and registered medical practitioners, including practitioners within three months of qualification, for the appointments of TWO JUNIOR ASSISTANT RESIDENT MEDICAL OFFICERS in the General Hospital, Jersey. Appointment will be for six months in the first instance, but is renewable. Salary £250 per annum, with full board, lodging, and laundry. There are other emoluments for certificates under the local Social Assurance, amounting to £50 per annum. One practitioner will be expected to do surgical duties, the other medical. Taxation on the island is much lower than in England. Applications to be forwarded to R. N. McKinstry, Medical Officer of Health, Public Health Office, Royal Square, St. Helier, Jersey, C.I.

COUNTY BOROUGH OF SOUTHEND-ON-SEA.—Applications are invited from registered medical practitioners, male and female, including R and W practitioners who now hold A posts, for the appointment of RESIDENT ASSISTANT MEDICAL OFFICER, Grade II (B2), at the Southend Municipal Hospital, Rochford, Essex. Previous experience in the administration of anaesthetics is desirable. The salary is at the rate of £325 per annum, with full residential emoluments, plus war bonus. The person appointed will be liable to pay superannuation contributions if the provisions of the Local Government Officers' Superannuation Acts are applicable. To R and W practitioners the appointment will be limited to six months, otherwise one year, and subject to one month's notice on either side. Post becomes vacant August 1, 1945. Application forms, obtainable from the Medical Superintendent, Southend Municipal Hospital, Rochford, Essex, should be returned as soon as possible.—H. J. Worwood, Town Clerk, Town Clerk's Office, Southend-on-Sea.

COUNTY BOROUGH OF ROCHDALE. Municipal General Hospital, Birch Hill (475 beds).—Applications are invited from registered medical practitioners, male and female, for the appointmen of two JUNIOR RESIDENT MEDICAL OFFICERS (A). Practitioners within three months of qualification and liable under the National Service Acs may apply, when appointment will be for six months, otherwise not exceeding one year. One post will be mainly midwifery and gynaecology, and the other mainly medical. Salary at the rate of £225-£275 per annum, plus war bonus of approximately £30 per annum, with full residential emoluments. Application forms may be obtained from the Medical Officer of Health, Public Health Offices, Baillie Street, Rochdale, and must be returned to him as soon as possible.—Harry Bann, Town Clerk.

CITY OF BIRMINGHAM. Dudley Road Hospital. (An acute general hospital with 1,100 beds). TWO JUNIOR MEDICAL OFFICERS (A).—Applications are invited from registered medical practitioners, male or female, for two appointments as Junior Medical Officers (A) (either House Surgeons or House Physicians), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointments will be for periods of six months, otherwise they will be for periods of twelve months. The salary will be at the rate of £200 per annum, plus residential emoluments. Applications should be addressed to the Medical Officer of Health, Public Health Department, Birmingham, 3, to reach him not later than July 10, 1945.

CITY OF BIRMINGHAM. Selly Oak Hospital. (An acute general hospital with some 520 beds, with an Infirmary of 650 beds attached). TWO JUNIOR MEDICAL OFFICERS (A).—Applications are invited from registered medical practitioners, male or female, for two appointments as Junior Medical Officers (A) (either House Surgeons or House Physicians), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointments will be for periods of six months, otherwise they will be for periods of twelve months. The salary will be at the rate of £200 per annum, plus residential emoluments. Applications should be addressed to the Medical Officer of Health, Public Health Department, Birmingham, 3, to reach him not later than July 10, 1945.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE. Newcastle General Hospital (900 beds).—Applications are invited from registered medical practitioners, male and female, for the appointments of 2 HOUSE PHYSICIANS (A) and 2 HOUSE SURGEONS (A), to become vacant at the beginning of July. The appointments will be for a period of six months. Salary at the rate of £150 per annum, with full residential emoluments and cost-of-living bonus. Practitioners within three months of qualification and liable under the National Service Acts may apply. Applications to be forwarded to the Medical Officer of Health, Town Hall, Newcastle-upon-Tyne, 1.

CITY OF MANCHESTER. Crumpsall Hospital (1,400 beds) (Recognized under the regulations for the F.R.C.S.). RESIDENT ASSISTANT MEDICAL OFFICER (A).—Applications are invited from registered medical men for the above-mentioned appointment, which will become vacant on August 21, 1945, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for a period of six months, otherwise it will be for a period of twelve months. The duties of the post are mainly medical. The basic salary for the appointment is £200 per annum, with board, residence, and laundry in addition, subject to the Manchester Corporation conditions of service. A temporary cost-of-living wages addition amounting at present to £60 per annum, is payable in addition to the salary stated. Applications are to be addressed to the Medical Superintendent, Crumpsall Hospital, Crumpsall, Manchester, 8, at once. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF STOKE-ON-TRENT. CITY GENERAL HOSPITAL. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners (single, male or female), including R and W practitioners who now hold A posts, for the appointment of Assistant Resident Medical Officer (B2), at the City General Hospital, Stoke-on-Trent. If offered to an R or W practitioner the appointment will be limited to a period of six months, otherwise will be for a period of one year. The salary is at the rate of £250 per annum, plus bonus, with full residential emoluments. The Hospital, which is an Emergency Hospital, has approximately 1,200 beds, and there is excellent scope for medical, surgical, and obstetrical work.—Applications endorsed "Medical Officer, City General Hospital," to be sent to the undersigned immediately.—Harry Taylor, Town Clerk.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE. Shotley Bridge Emergency Hospital (900 beds).—Applications are invited from registered medical practitioners, male and female, for the appointments (two) of HOUSE SURGEON (A), now vacant. The appointments will be for a period of six months. Salary at the rate of £200 per annum, with full residential emoluments and cost-of-living bonus. Practitioners within three months of qualification and liable under the National Service Acts may apply. Applications to be forwarded to the Medical Officer of Health, Town Hall, Newcastle-upon-Tyne, 1.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 11

CITY OF CARLISLE.—City General and Fusehill Emergency Hospitals, Carlisle. (100 civilian beds, 240 E.M.S. and reserve beds).—Applications are invited for the following appointment: JUNIOR RESIDENT MEDICAL OFFICER (A), to assist in care of civilian beds and for duty in surgical wards of adjacent E.M.S. hospital. Practitioners within three months of qualification who are liable for service under National Service Acts may apply. Appointment will be for a period of six months, from August 1, 1945. Salary £200 per annum, with full residential emoluments. Applications should be sent to the Acting Medical Officer of Health, 22, Fisher Street, Carlisle, as early as possible.

COUNTY BOROUGH OF WARRINGTON. Warrington General Hospital (340 beds). RESIDENT MEDICAL OFFICER.—Applications are invited from registered medical practitioners for the post of Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R or W practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Salary £225 per annum, together with board, residence, and laundry. There are two other medical officers in residence; good opportunity for experience in midwifery, medicine, and surgery. Applications to be sent forthwith to the undersigned.—Stuart F. Allison, Medical Officer of Health, Health Dept., Sankey Street, Warrington.

CITY OF MANCHESTER. Public Health Department. Booth Hall General Hospital for Children (760 beds). TEMPORARY VISITING CONSULTANT SURGEON (PART-TIME).—The Public Health Committee invites applications for the above-mentioned appointment at the Booth Hall General Hospital for sick children, Blackley, Manchester, 9. It does not carry with it right of entry into the Corporation Superannuation Fund. The remuneration will be £250 per annum. Two normal sessions at the hospital will be required each week with emergency sessions in addition, as required. Forms of application and copies of a memorandum on the terms and conditions of the appointment may be obtained from the Medical Officer of Health, Hospitals Administration Section, G.P.O. Box 399, Town Hall, Manchester, 2, by whom applications must be received at once. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

COUNTY OF DENBIGH. Wrexham Emergency Hospital (350 beds, excluding annexes).—Applications are invited from registered medical practitioners for the appointment of a HOUSE SURGEON (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. Salary is at the rate of £200 per annum, plus cost-of-living bonus, together with the usual residential emoluments. Applications to Dr. H. Arwel Thomas, County Medical Officer of Health, 40, Well Street, Ruthin, Denbighshire.

COUNTY BOROUGH OF BRIGHTON. Municipal Hospital Services. RESIDENT ASSISTANT MEDICAL OFFICER (B2).—Applications are invited for the above appointment from registered medical practitioners, male or female, including R and W practitioners who now hold A posts. If held by an R or a W practitioner the appointment will be limited to six months, otherwise will be for a period not exceeding one year. Experience in obstetrics and general surgical work would be considered an advantage. Salary £300 per annum, together with residential allowances, valued for the purposes of superannuation at £150 per annum and cost-of-living bonus. Further details and forms of application may be obtained from the undersigned.—Stanley J. Firth, Medical Director, Municipal Hospital, Elm Grove, Brighton, 7.

COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE, County and Emergency Hospital, Otley (296 beds).—Applications are invited for the post of TEMPORARY RESIDENT ASSISTANT MEDICAL OFFICER (B1) at the County and Emergency Hospital, Otley. Preference will be given to candidates who have had good surgical experience. Salary £50 per annum, together with the usual residential allowances. Suitably qualified R and W practitioners now holding B1 appointments and rejected by the R.A.M.C. may apply. Applications should be sent to the County Medical Officer, County Hall, Wakefield, immediately.—Bernard Kenyon, Clerk of the County Council, County Hall, Wakefield.

CITY OF SALFORD. Hope Hospital. TEMPORARY VISITING PHYSICIAN(S) for Consultant Sessions.—Applications for the above-mentioned post are invited from suitably qualified and experienced medical practitioners, who are able to conduct one, two, or three sessions per week. The appointment is temporary in the first instance and remuneration will be at the rate of £2 12s. 6d. per session for a maximum of three sessions per week. Applications should be forwarded to the Medical Officer of Health, 143, Regent Road, Salford, 5, not later than September 1, 1945, which date has been fixed in order to allow time for applications to be received from members of H.M. Forces.—H. H. Tomson, Town Clerk.

COUNTY COUNCIL HOSPITAL, Hereford (476 beds).—Applications are invited from registered medical practitioners for the post of SENIOR ASSISTANT MEDICAL OFFICER (B1) of the above hospital. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R and W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Preference will be given to applicants who have had both clinical experience and experience in hospital administration. Commencing salary £550 per annum (plus cost-of-living bonus applicable to temporary appointments, at present £36 8s. per annum) plus full residential emoluments. Applications should be sent to the Medical Superintendent, County Council Hospital, Hereford, forthwith, mentioning the names and addresses of two or more persons to whom reference may be made.

COUNTY COUNCIL OF DURHAM. Holywood Hall Sanatorium, Wolsingham (183 beds.).—A LOCUM TENENS is required for the post of ASSISTANT RESIDENT MEDICAL OFFICER at the above Sanatorium. Salary, to be fixed in accordance with qualifications and experience, will be at the rate of 10 to 12 guineas per week, payable monthly, with board, residence, and laundry in addition. Candidates must have held hospital and sanatorium appointments, and have had practical experience in the diagnosis and treatment of tuberculosis. Practical experience in radiology is also required. The appointment will be subject to the regulations for the time being of the County Council relative to the payment of salary in the case of sickness, and will be terminable by one calendar month's notice on either side. Applications as soon as possible to the County Medical Officer of Health, Shire Hall, Durham.—J. K. Hope, Clerk of the County Council, Shire Hall, Durham.

CITY OF MANCHESTER.—Monsall Hospital for Infectious Diseases (600 beds). JUNIOR RESIDENT ASSISTANT MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for the above-mentioned appointment, which is vacant now, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts the appointment will be for a period of six months, otherwise it will be for a period of twelve months. The duties of the post are mainly medical. The basic salary for the appointment is £250 per annum, with board, residence, and laundry in addition, subject to the Manchester Corporation conditions of service. A temporary cost-of-living wages addition is payable in addition to the salary stated. Applications are to be addressed to the Medical Superintendent, Monsall Hospital, Newton Heath, Manchester, 10, and must be received by him at once. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

COUNTY BOROUGH OF WEST HARTLEPOOL. Public Assistance Committee. Howbeck Infirmary and Emergency Medical Services Hospital (350 beds).—The Public Assistance Committee invite applications from registered male or female medical practitioners for the appointment of ASSISTANT MEDICAL OFFICER (resident) (B1). Salary will commence at £350 per annum, and will rise by annual increments of £25 to a maximum of £450 per annum, together with usual residential emoluments valued for superannuation purposes at £125 per annum. Suitably qualified R or W practitioners holding B2 appointments are invited to apply. Applications from R or W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The successful candidate will be required to devote his or her whole time to the service of the Corporation and to carry out the instructions of the Medical Superintendent. Applications should be received by the Public Assistance Officer, Avenue Road, West Hartlepool, as soon as possible.—E. J. Waggott, Town Clerk, Town Clerk's Office, West Hartlepool.

COUNTY BOROUGH OF BLACKBURN.—Applications are invited from registered medical practitioners, male or female, for the post of RESIDENT JUNIOR ASSISTANT MEDICAL OFFICER (A) at Queen's Park Hospital and Institution, Blackburn, at a salary of £250 per annum, plus cost-of-living bonus, together with board, apartments, and attendance. Practitioners within three months of qualification who are liable for service under the National Service Acts may apply, when appointment will be for a period of six months, otherwise the appointment will be limited to a term not exceeding one year. Further particulars may be obtained from the Public Assistance Officer, Cardwell Place, Blackburn, to whom applications must be sent.—Chas. S. Robinson, Town Clerk.

DORSET COUNTY HOSPITAL, Dorchester, Dorset. (Voluntary hospital, 100 beds.)—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (A), vacant on August 26 next. Salary is at the rate of £200 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for six months.—C. H. Spence, Secretary.

COUNTY BOROUGH OF WEST HAM. Whipps Cross Hospital. TEMPORARY RESIDENT ASSISTANT MEDICAL OFFICER.—Applications are invited from registered medical (male or female) practitioners for the post of Temporary Resident Assistant Medical Officer (B1) at Whipps Cross Hospital, Leytonstone, E.11. Suitably qualified R and W practitioners holding B2 appointments may apply. R and W practitioners holding B1 appointments cannot apply unless they have been rejected by the R.A.M.C. Salary for the post is £350 per annum, rising by annual increments of £25 to a maximum of £450 per annum, plus a temporary war bonus, with apartments, board, and laundry, valued for superannuation purposes at £100 per annum. The salary is inclusive, and all fees received from whatever source must be paid to the Council. Candidates must be fully qualified registered medical practitioners, and should have held a previous resident hospital appointment. Preference will be given to candidates with practical experience of surgical operations, and the person appointed must give his or her whole time to the service of the Council, and will be required, should the occasion arise, to act in any of the Council's other institutions. The appointment will be subject to the Council's Regulations as made from time to time regarding holidays, sick pay, etc., and the successful candidate will be required to pass a medical examination. Forms upon which application must be made can be obtained from Dr. E. Ashworth Underwood, Medical Officer of Health, 223-225, Romford Road, West Ham, E.7, on receipt of a stamped addressed envelope, and returned to him not later than July 9, 1945. Canvassing members of the Council is prohibited and will disqualify.—Charles E. Cranfield, Town Clerk, Town Hall, West Ham, E.15.

CITY OF BATH. St. Martin's Hospital (800 beds).—Applications are invited from registered medical practitioners for appointment as (1) RESIDENT MEDICAL OFFICER (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. This appointment will not exceed one year, and if held by a practitioner liable under the Acts will be for a period of six months. Salary £200 per annum, with board, residence, laundry, and cost-of-living bonus. (2) RESIDENT MEDICAL OFFICER (B2). Registered medical practitioners, including R and W practitioners who now hold A posts, are invited to apply. If held by an R or a W practitioner, the appointment will be limited to six months, otherwise will be for a period not exceeding one year. Commencing salary £250 per annum. Applicants should be specially interested in and have had experience of maternity work. About half the beds are in the E.M.S. Hospital, and there is excellent scope for medical and surgical work. Both posts are suitable for either man or woman. Applications to the Medical Officer of Health, Sawclose, Bath.

EAST SUSSEX COUNTY COUNCIL. Southlands Hospital, Shoreham-by-Sea, Nr. Brighton.—Applications are invited from fully qualified male or female registered medical practitioners for the appointment of TEMPORARY RESIDENT OBSTETRIC MEDICAL OFFICER (B1), vacant immediately. Salary within the range of £500 to £700 per annum, according to qualifications and experience, with emoluments valued at £90 p.a. Preference will be given to candidates with the M.R.C.O.G. (£700 will be paid to holders of this qualification). The duties of the post include the care of the maternity wards of 40 beds and the ante-natal and post-natal clinics. Candidates with experience in operative surgery, particularly gynaecology, preferred, as there are opportunities for the latter. The hospital (519 beds) is a general hospital under the administration of the East Sussex County Council and graded 1A in the Emergency Medical Scheme. Suitably qualified R and W practitioners holding B2 appointments, also those holding B1 and rejected by the R.A.M.C., may apply. Applications should be made on a form obtainable from the Medical Superintendent, Southlands Hospital, Shoreham-by-Sea, and must be returned to him, together with copies of three recent testimonials.—H. S. Martin, Clerk of the County Council, County Hall, Lewes.

HERTFORD COUNTY HOSPITAL (173 beds, plus E.M.S. beds).—Applications are invited from registered medical practitioners, male, for the appointment of HOUSE SURGEON (A), vacant now, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary £150 per annum, with full residential emoluments. Applications to be forwarded to Percy G. Brooks, House Governor.

LINCOLN COUNTY HOSPITAL. (Voluntary hospital, 200 beds.)—Applications are invited from registered medical practitioners for the appointment of SENIOR HOUSE SURGEON (B1), vacant August 1, 1945. Applicants should have held house appointments and had surgical experience. Salary is at the rate of £325 per annum. Suitably qualified R practitioners holding B2 appointments, also those holding B1 and rejected by the R.A.M.C. may apply. Applications should be sent to Arthur Moore, Secretary-Superintendent.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 11

EAST RIDING COUNTY COUNCIL. Driffield Emergency Hospital (324 beds).—Applications are invited from registered medical practitioners for the appointment of SENIOR HOUSE SURGEON (B1), vacant immediately. The hospital provides experience in general surgery. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R and W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary from £350 per annum, according to qualifications and experience, together with full residential emoluments. Applications to reach the undersigned not later than Wednesday, July 4, 1945.—T. Stephenson, Clerk of the Council, County Hall, Beverley.

HERTFORDSHIRE COUNTY COUNCIL. Wellhouse Hospital, Barnet. RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners for the appointment of a Resident Surgical Officer (B1), to become vacant on July 6, 1945. Applicants should have held house appointments, and had experience in general surgery and some special experience in orthopaedics. Preference will be given to candidates holding Diploma of F.R.C.S. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £500 per annum, plus emoluments or living-out allowance. The officer will be appointed to the E.M.S. staff in the first instance, but he should be prepared to transfer to the County staff if invited.—Elton Longmore, Clerk of the County Council, County Hall, Hertford.

LONDON COUNTY COUNCIL.—Applications are invited from registered medical practitioners for inclusion in a panel for filling vacancies for TEMPORARY PART-TIME ASSISTANT MEDICAL OFFICERS for school medical inspection. The rate of pay is 30s. a session of 2½ hours, together with appropriate cost-of-living addition. Experience of medical examination of children is desirable. Employment will depend upon the requirements of the work. All medical practitioners who were officially employed by the Council on this work before the war, but have been so employed during the war in London schools, should apply if they wish to be considered for reinstatement on the panel of part-time school medical officers. Application form (stamped addressed envelope necessary) from the Medical Officer of Health (S.D.5), County Hall, Westminster Bridge, S.E.1. Canvassing disqualifies.

MIDDLESEX COUNTY COUNCIL. LOCUM TENENS MEDICAL OFFICER (B1) at SHENLEY MENTAL HOSPITAL, St. Albans (man or woman) required for long or short term. Experience in psychiatry preferable but not essential. Facilities for out-patient clinic experience and tuition. Salary £10 10s. per week and emoluments consisting of full residential facilities. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applications to the Medical Superintendent.—C. W. Radcliffe, Clerk of County Council.

AMENDED CLOSING DATE

MIDDLESEX COUNTY COUNCIL.—ASSISTANT MEDICAL OFFICER (B1, RESIDENT), for surgical duties required at CENTRAL MIDDLESEX COUNTY HOSPITAL, Park Royal, N.W.10.—Applications are invited from registered medical practitioners who have held house appointments (including R and W practitioners holding B2 posts). Experience in neurosurgery desirable. R and W practitioners holding B1 posts ineligible unless rejected by the R.A.M.C. Salary £400 by £25 to £475 per annum, board, lodging, and laundry. War bonus (now £60 per annum, proportion only in cash). Appointment in first instance for one year; medical examination. Whole-time duties such as Council may require under general supervision of Medical Director. Post now vacant. Application to the undersigned. Application forms not provded. Closing date July 7, 1945.—C. W. Radcliffe, Clerk of the County Council. Middlesex Guildhall, Westminster, S.W.1.

SURREY COUNTY COUNCIL. Botley's Park War Hospital, near Chertsey, Surrey.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE OFFICER (A) at the above hospital, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. Salary is at the rate of £120 p.a., plus full residential emoluments. Apply to the Medical Superintendent.

WESTMORLAND COUNTY HOSPITAL, Kendal (82 beds).—Applications are invited from registered medical practitioners (unmarried) for the appointment of HOUSE SURGEON (B2), vacant now. Salary £300 per annum, with board, residence, and laundry. R and W practitioners who now hold A posts may apply, when appointment will be limited to, six months, otherwise may be extended. NOTICES

ROYAL COLLEGE OF SURGEONS OF ENGLAND. MONTHLY DINNERS.—Monthly subscription dinners are held in the College for Fellows and Members of the College and Members of the Specialist Associations linked with the College through the Joint Secretariat; each may bring a guest. The dinners are held on the evening on the Wednesday preceding the second Thursday of the month, but there will be no dinner in August or September. Thus the next two dinners will be on Wednesday, July 11, and Wednesday, October 10 There is an inclusive charge of one guinea for each dinner. Applications will be dealt with in the order in which they are received and must reach the Secretary of the College in Lincoln's Inn Fields W.C.2., at lest one week before the date of the dinner, accompanied by the remittance.—Kennedy Cassels, Secretary.

UNIVERSITY AND INDUSTRIAL APPOINTMENTS

THE UNIVERSITY OF SHEFFIELD.—Applications are invited for the newly-established full-time CHAIR OF MEDICINE in the University. The Professor will arrange all lectures, classes and demonstrations in the Department of Medicine, he will advise the Faculty of Medicine upon the co-ordination of teaching in subjects which properly come within the province of Medicine as distinct from Surgery and Obstetrics, and will be expected to prosecute and foster research in the Department of Medicine. During his tenure of the Chair the Professor will be given, by the Court of Management of the Royal Sheffield Infirmary and Hospital, the status of Honorary Physician and will be provided with in-patient, out-patient and laboratory facilities in the hospital. Salary £2,000 a year with Superannuation provision under the Federated Superannuation Scheme for Universities. Under this the Professor will contribute 5% of his salary and a further 10% of the salary will be *added* by the University, the whole 15% being applied in accordance with the terms of the Scheme. Any fees for such consulting work as is allowed will be paid over to the University. A candidate must be a graduate in Medicine and either a Fellow or a Member of the Royal College of Physicians of London. He must have held a responsible clinical appointment in a teaching hospital and must produce evidence of his capacity to carry out and to direct clinical research. It is desired that the successful candidate begin his duties on January 1, 1946, or as soon as possible thereafter. Applications (six copies) with testimonials and the names of referees should be sent to the undersigned, from whom further particulars may be obtained. In order to allow time for candidates now abroad or in H.M. Forces to apply, the last date for receipt of applications has been fixed at *October 1, 1945.* A referee who is abroad may send a confidential report direct to the Registrar without waiting for an enquiry from the University.—A. W. Chapman, Registrar.

UNIVERSITY OF DURHAM, King's College Newcastle-upon-Tyne.—Applications are invited for the joint post of LECTURER IN CHEMICAL PATHOLOGY in the Department of Pathology, Medical School, King's College, and Assistant Chemical Pathologist to the Royal Victoria Infirmary, Newcastle-upon-Tyne. Candidates must have had special experience in Chemical Pathology. Preference will be given to applicants with a medical qualification. In addition to assisting in teaching and the biochemical work of the hospital the person appointed will be expected to undertake research for which opportunities and facilities are provided. Commencing salary £600 per annum. The appointment will be from October 1, 1945, or other such near date as may be arranged. Further particulars as to duties should be obtained from the Professor of Pathology. Ten copies of applications, accompanied by the names of not more than three referees, should be submitted to the undersigned on or before Saturday, July 7, 1945.—G. R Hanson, Registrar of King's College.

UNIVERSITY OF LONDON.—The Senate invite applications for the CHAIR OF SURGERY, tenable at the British Postgraduate Medical School (salary not less than £2,500). Applications must be received not later than January 1, 1946, by the Academic Registrar, University of London, Richmond College, Richmond, Surrey, from whom further particulars should be obtained.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY JULY 7 1945

HEARD AT HEADQUARTERS

Home Rule for Scotland

At the Special Representative Meeting which was held in London at the beginning of May it was agreed that motions and amendments on the agenda relating to proposals for the National Health Service in Scotland should be referred for consideration by a Special Representative Meeting to be held in Edinburgh. It is well understood, and indeed stated in the White Paper, that for geographical and local government reasons the general administrative structure of the service cannot be exactly the same in Scotland as in England and Wales.

The Special Representative Meeting in Edinburgh took place on June 28 and lasted all day. It was attended by representatives of all the Scottish Divisions and by members of the Scottish Committee of the Association, while from headquarters came the President of the Association (Mr. Souttar), the Chairman of Council (Dr. Dain), the Chairman of the Representative Body (Dr. Peter Macdonald), and the Secretary (Dr. Hill). With Dr. J. B. Miller in the chair and Dr. Wilkie Millar, as chairman of the Scottish Committee, guiding the business, the ground was adequately covered in a very short time.

The same requirements as to publication, imposed from above, apply to the Scottish meeting as to the London one, though all members of the medical profession in Scotland are to be informed of the decisions of the meeting. But it can be said that the question which aroused the chief discussion was whether the idea of a Central Medical Board should in Scotland be retained or dropped. The feeling of the meeting was strongly in favour of a Central Medical Board for Scotland, subject, however, to satisfactory negotiations on its appointment and constitution and on the powers it will possess.

Scottish Debate

One feature of the Scottish meeting—no doubt the idea of Dr. Craig, the Scottish Secretary—was to have a very large chart illustrating the structure of the administration proposed and the interrelation of the various boards, councils, committees, and services. It proved very useful during the day, and speakers by pointing to it saved themselves and their hearers a number of words.

It is interesting to an Englishman to hear Scottish debate. It is quite wrong to suppose Scottish speaking to be prosy and dull. Some of the representatives had a flair for picturesque expressions. One of them, for example, in talking about the method of appointment to some governing bodies, said that there must be no "barnacle-ism"—a useful word even if not in the dictionary. Another, speaking of the arrangement whereby the Secretary of State might make appointments to a body which already had its quota of professional representatives, said that the Minister would be "able to load the pack with an unspecified number of 'jokers.'" Perhaps it was not an unintentional mixture of metaphors when another declared that somebody had "let the cat out of the bag and it had proved to be a mailed fist"!

One Scottish representative let himself go over the popular notion of health centres—he thought American films had something to do with it. "They visualize marble palaces, with chromium-plated fittings and platinum-blonde receptionists." Some such idea, perhaps not quite so grandiose, does really obtain among well-educated people; at a big health conference which I attended next day in London one speaker welcomed the health centre as meaning the end of independent practice. No doctor, said this lady, should in these days practise by himself; he should be a member of a team. Many loose ideas are current on the subject of the health centre, which all goes to show how well advised the B.M.A. was in insisting that, before the health centre idea was established, alternative types should be the subject of experiment in agreement with the local medical profession.

Standards of Remuneration

The Spens Committee is devoting its two-day meeting next week to considering the evidence, written and oral, of the B.M.A. On the first day it will interrogate the witnesses on the general aspects of the Association's written evidence, and on the following day hear witnesses speaking on the special aspects of practice in different areas. The principal witnesses who have been nominated to present the memorandum of evidence are Dr. Guy Dain (Chairman of Council), Dr. E. A. Gregg, Dr. S. Wand, Dr. I. D. Grant, and Dr. Charles Hill. In addition ten others have been invited to give evidence from different areas—completely built-up or industrial areas, completely rural areas, Welsh valleys, the Highlands and Islands of Scotland, mixed areas mostly urban, and mixed areas mostly rural, as well as special cases of general practice. As for this last, as the witness chosen is a Bournemouth doctor, it may be taken to mean practice in a community in which there are an unusual number of invalids and people seeking health.

The memorandum of evidence is as yet, of course, a private document. The Insurance Acts Committee and the General Practice Committee have been meeting this week in joint session to consider it in draft. It looks a very ably constructed document, and is supported by a dozen tables of figures, the result of careful work at headquarters and at the periphery extending over months.

Contract of Service

A Division recently asked whether: (1) the insurance doctor's contract of service is with the local insurance committee absolutely or with the Ministry through the agency of the committee, and (2) whether any contract in reality exists between the doctor and the insured patient.

The questions were submitted to the B.M.A.'s solicitors, whose lengthy reply was laid before the Insurance Acts Committee this week. There are possible pitfalls in summarizing a legal explanation, because it is subject to various qualifications, but in general the view of the solicitors is this. On the first question, the contract is clearly with the committee itself in each individual case. On the second question, in law there is always a contract as well as a Common Law duty between a patient and his doctor, the contract being that in consideration of the patient's entrusting himself to the doctor the latter will exercise reasonable care and skill. The solicitors are unable to see that the position goes any further than that in the case of the insured person. After all, the insured person is in his turn a contractor with the insurance committee, and if the service he receives falls short of the medical treatment promised under the Acts and regulations his duty is to complain to the committee, who will investigate the matter. There is no other direct contract existing between the doctor and the insured patient, so it follows that except for negligence—that is, failure to exercise reasonable care and skill—an insured person has no right of action through the courts against a medical man for alleged breach of contract. For example, he would have no right of action if a doctor did not adhere to his surgery hours, or, save on the issue of negligence, failed to visit or carry out other terms and conditions of his contract with the committee.

Medical Attendance on School-children

It is worth while putting on record that Mr. Butler's successor at the Ministry of Education, Mr. Richard Law, has endorsed his predecessor's undertakings concerning the school medical service. When it was represented to Mr. Butler that even where developments were possible they should at present take the form of a greater use of existing services, instead of new departures likely to prejudice future developments in connexion with the health service as a whole, he agreed generally with that view. Mr. Law stated in the House just before the dissolution that the fact that the National Health Service was not yet in being, together with the medical man-power situation, made it difficult to lay down lines of development for the school medical service for the immediate future, and he added—to quote his words from Hansard: "I mean, however, to fulfil the pledge my predecessor gave to the House, and, while encouraging urgent developments in those clinic and hospital services which have always been the mainstay of the school medical treatment service, I shall not, for example, approve any proposals which would lead to the setting up by local education authorities of a general medical-practitioner service."

Correspondence

Physiotherapists and the Board of Registration of Medical Auxiliaries

SIR,—The Board of Registration of Medical Auxiliaries welcomes the letter in the *Supplement* of June 9 (p. 107) from the chairman of the council of the Chartered Society of Physiotherapy in which he expresses the opinion that State registration of physiotherapists is practically certain to come before long, for the Board has for some time been advocating the State registration of all medical auxiliaries. The Board is also glad to have a statement of the reasons why the Society seceded from the Board, for, though the Society was one of the foundation members of the Board, it seceded without any previous discussion with the Board and without giving any reason for its withdrawal.

To us the reasons given seem very inadequate to justify such a serious step. When we recall that the Chartered Society has always been autonomous, and that the Board is an independent registering and co-ordinating body which has no power or wish to interfere with the autonomy of its constituent bodies, the argument about minority representation cannot be deemed valid. Nor is the remark about one-portal entry apposite if it be remembered that the Board has consistently maintained the one-portal system of entry. Moreover we think it ought to be counted an advantage for all medical auxiliaries, including physiotherapists, to be registered by the one Board, for in this way better co-ordination is likely to be achieved. If the Chartered Society considers that physiotherapists should not be classed with other medical auxiliaries there would be serious ground for alarm. There is one reason not mentioned in the letter which ought to be added. Objection has been raised to the fact that the constitution of the Board ensures that its medical members have a majority; this was regarded as an essential feature by the British Medical Association and the other foundation bodies, including the Chartered Society. It was this objection which gave rise to the genuine disquietude in the mind of the Board as to the future relationship between the medical profession and the Chartered Society. The Board did not need the chairman of the Society's assurance to know that under its present distinguished leadership there could not be the slightest danger, but in future times and under other leaders it would need a bold man to say that an attempt at a greater and more harmful independence might not be sought.

In the final paragraph of the letter the claim of the Chartered Society for independence is compared with that of the medical profession. The Society makes a greater claim. There are many examining and qualifying bodies for the medical profession, each of whom keeps a complete register of its graduates and holders of diplomas, but none can legally practise until registered by a body which is independent of each of the examining bodies —i.e., the General Medical Council. The Chartered Society at present claims the privilege of conducting its own qualifying examination and keeping the official register of those who are duly qualified. We consider that this position has inherent and real dangers which can only be guarded against either by statutory registration or by the aid of some voluntary external registering body such as the Board itself.

In the opinion of the Board the Chartered Society has not acted wisely in severing its connexion. The Board was formed to carry out the policy of the British Medical Association—a policy which should provide a guide to the medical profession and others—and the decision of the Council published in the Annual Report of Council (*Supplement*, May 12, p. 79) makes it clear that this policy still has its support. The Board can only hope that even now the Chartered Society may see its way to reverse its decision.—I am, etc.,

V. ZACHARY COPE,
President,
Board of Registration of Medical Auxiliaries.

Medical Demobilization

SIR,—Of recent months your correspondence columns have carried many letters from Service medical officers complaining about gratuities or contrasting their lot (sometimes unjustly) with that of medical men still at home. But now a much graver threat looms over Service medical men. It is that the present release scheme, based on age plus service, will not apply to R.A.M.C. officers. Admittedly this has not yet been stated officially, but signs are not lacking that such a move is in fact intended. What other conclusion indeed can be drawn from a statement that all those above release group 17 are to be considered eligible for Far East service?

That medical personnel in abundance are required for this last phase of the war cannot be doubted. But the prospect of perhaps another two years in the Army spent on the other side of the world, ambitions for the future and memories of home alike becoming fainter, is not calculated to raise morale or enhance enthusiasm. A clear statement of intention backed by something more concrete than mere "exigencies of the Service" is needed.—I am, etc.,

C.M.F. "B.P.C."

*** The Secretary of the Central Medical War Committee states that the Committee is assured by the War Office that the release scheme *is* being applied to R.A.M.C. officers. The fact that an officer in an age-service group above 17 is posted now to the Far East to replace an officer in a lower group does not mean that he will be unable to obtain release in his turn. —ED., *B.M.J.*

SIR,—Much ill temper and misunderstanding have been recently in your columns about medical demobilization, and in particular about interchange between the E.M.S. and the Forces. I do not wish to enter into this latter controversy, because I have no idea of the number, if any, of fit doctors who are evading military service. Since, however, call-up is in the hands of the Central Medical War Committee "evade" is not strictly applicable. While I have little doubt there are a few who manage to represent themselves as essential and actively attempt to avoid service, I do not think the number can be sufficient to make any appreciable difference to the rate of release of doctors.

This controversy is obscuring a more important aspect of release of doctors. In a circular letter the C.M.W.C. states that "requirements of the Forces for the war in the Far East will be such as to make impossible a reduction in strength of the medical branches proportionate to the reduction in strength of other branches." I do not expect that release of doctors will follow release of other personnel group for group, but I do expect that it will be in proportion to the total number of releases. Mr. Bevin has stated that the aim is for 750,000 to be released by Christmas, 1945. Then this number no longer requires the attention of Service doctors, but will require the attention of civilian doctors. Clearly, then, the number of doctors needed by the Forces to look after 750,000 should be released at the same time. I believe the Forces have approximately one doctor to every 500 personnel. Then 1,500 medical officers should also be released by Christmas, 1945.

I am aware that call-up for the Forces is to continue up to the age of 25 or 27, but so also is the call-up of newly qualified doctors. It has been estimated that this source provides about 1,200 doctors a year fit for military service—say 600 by Christmas, 1945. This number is sufficient for 300,000 troops, which I think is more than the annual call-up of age groups up to 25. In other words, there is room for a further release of medical officers on the basis of call-up of newly qualified doctors. The total number released in these ways would be at least between 1,500 and 2,000, which is quite a considerable number of doctors when used in more economical ways in civil life, where at present, I believe, there is only one doctor to about 3,000.

Without making any allowance for direct exchanges between Service and civil medicine—and the C.M.W.C. states on future recruitment policy, "No class of practitioner will escape our attention" —there is abundant reason why a considerable number of medical officers should be released between now and Christmas, 1945. I consider it is the duty of the C.M.W.C. to urge in the strongest possible terms on both Government and Service Departments the need for release of medical officers at least in the proportion outlined in this letter.—I am, etc.,

G. O. RICHARDSON,
Squad. Ldr., R.A.F.V.R.

SIR,—I have read with considerable interest the recent correspondence in the *Supplement* on the subject of medical demobilization. I feel that many doctors in the Services are quite unable to reconcile the remarks of the Secretary of the Central Medical War Committee with the information they receive from the "higher formations" of the Service to which they belong. Within the last ten days I have been informed that my Command Headquarters consider there is little prospect of medical officers in release groups higher than 10 being released within two years!

If the Central Medical War Committee considers that "it will rarely be necessary for medical officers to be retained beyond the dates of release of their age-service groups" (*Supplement*, June 23) is it not high time that this information was imparted to the appropriate Service authorities in order that the present confusion may be avoided, and that it may be possible for those of us who have now been in the Services for four or five years to make some plans for the future and enable us to give our sadly overworked partners and colleagues in civilian practice some indication of when they may anticipate our return?—I am, etc.,

"SQUADRON LEADER, R.A.F."

*** The Secretary of the C.M.W.C. writes: The letter I sent on behalf of the Central Medical War Committee to all serving practitioners was prepared with the knowledge and approval of the Service authorities. The Central Medical War Committee is doing, and will do, its utmost to see that the terms of this letter are put into effect.

The Special Representative Meeting

SIR,—The report of the Special Representative Meeting held on May 3 and 4 has surprised and shocked me, since I think the proceedings of the meeting were a betrayal of both the nation and the medical profession. Since the Minister of Health has asked that his proposals should be regarded as confidential I shall not, of course, divulge any of them. But I consider that the proceedings of the meeting were a betrayal because the proposals discussed were very different from those suggested by the White Paper, which both Houses of Parliament considered broadly satisfactory when they were openly discussed, and equally different from the proposals which received a majority of votes in the answers to the questionary sent out by the B.M.A.

The request for secrecy, having come from the Minister of Health, cannot be blamed on the B.M.A. But I am astounded that any body of fair-minded intelligent men should think it proper to discuss secretly a matter that affects every inhabitant of the United Kingdom, especially at a time when, if these proposals were public, citizens would have an opportunity of letting their votes record their opinion. The Minister no doubt has his reasons for insisting that these discussions should be confidential; as he has not given his reasons we cannot know whether they are good or bad. But one effect of this secrecy is obvious; the General Election will be over before the proposals are made public, and the electorate will, therefore, be deprived of any say whatever in a matter in which it is vitally concerned. The B.M.A., in lending itself to—nay, in assisting in—such an utterly undemocratic procedure, is laying itself open to the well-deserved reprobation of the general public. I, for one, flatly disbelieve that such proceedings as those of the Special Representative Meeting were truly representative of the medical profession, which is, after all, mainly composed of honest-minded citizens.—I am, etc.,

Hampstead. M. W. GEFFEN.

The Parable of the Fire-station

SIR,—The limitations of a captive's correspondence compel me to be brief. Two countries were at war with the same enemy whose practice was to drop incendiary bombs on their towns and villages, so that fires were widespread and frequent. In the first country there were fire-stations to deal with these; also wardens in the towns and villages. Taking counsel how to improve matters, everyone agreed that what was needed was bigger and better fire-stations. The difficulty was that there were two kinds in operation, called the municipal and voluntary, and some thought the former better and others the latter, because it was manned by volunteers (many of whom possessed blunt hatchets). However, an earnest fellow propounded an ingenious (not ingenuous) compromise plan for reconciling the conflicting interests. This was put into practice, and many of the volunteers joined the new municipal fire-stations which sprang up as a result of the compromise. Obviously, the wardens were not much use, because they had not the necessary apparatus. Some were retained, however, to telephone to the fire-stations. There were many dramatic fire-fights and a good deal of heroism to compensate for the damage done.

The second country also had fire-stations and wardens. They, however, concluded that, as the fires invariably started in the houses, the best thing to do was to have plenty of wardens, well trained in putting out fires quickly. These were well paid out of the common purse, so that the people could have their services whenever necessary; they taught the people how to deal with fires themselves and also how to protect their houses, so that they did not catch fire at all. Fire-stations were also retained, but it was decided that the proper thing to do was not to *reconcile* particular interests but to *subordinate* them to the general interest, so the fire-stations were strategically disposed and nationally maintained. The result was considerably less heroism, but also considerably fewer fires, and the people thought it was a good arrangement.—I am, etc.,

Aberdeen. EDWARD WALKER.

*** Dr. Walker's letter has been "delayed in the post" for nearly 3½ years. He wrote it in a German P.O.W. camp in Poland early in 1942, but the German authorities did not forward it, presumably because they suspected some deep-seated and hostile meaning hidden in Dr. Walker's parable.—ED., *B.M.J.*

Social Insurance and Certification

SIR,—Your correspondent Dr. Lennox Johnston (*Supplement*, June 2, p. 102) assumes the lack of impartial certification, and describes an indulgence of certification, or, more properly, a laxity of certification, which, under the terms of the Essential Works Order, would appear to be a polite way of describing the activities of a fifth columnist. It is surely evident that such activities would not transform themselves into the impartiality desired under the Beveridge plan, but would merely transfer themselves to the guise of a "quisling" status, which, incidentally, would not harm the financial working of the plan in any way. Hence the rope round the neck in the terms of a fixed salary, and hence the objection of aspiring to dangle at the end of the noose by other members of the profession who attain impartiality while acting as free agents.—I am, etc.,

Tipton, Staffs. L. H. EUNSON.

Replacement of Service M.O.s

SIR,—Most serving officers would, I feel sure, welcome an assurance that the fitness for service of medical practitioners mobilized to replace them will be, or is being, assessed by an impartial medical board and not on the basis of private medical certificates. In addition, those who are not fit for service in the East might be called up to relieve medical officers in the United Kingdom and Europe.—I am, etc.,

R.A.F.V.R., 1940.

*** We are informed that recruits are invariably examined by medical boards. There is already a surplus of medical officers in low medical categories, and such officers are being posted for duty in Europe.—ED., *B.M.J.*

Secret Diplomacy

SIR,—Medical planning is in the air. But it is surely undesirable that small groups founded for scientific purposes, and by no means fully representative of the practitioners in the subjects concerned, should put forward national schemes for the future organization and administration of their professional work, and that such schemes should be sent secretly to a Minister of the Crown at present engaged in negotiations with accredited representatives of the whole medical profession. Yet this is what is happening, in one instance at least—that of the Medical Society for the Study of Venereal Diseases. Apart from the question of the propriety of such lobbying of a lay Minister, the decision to do so under secret cover is obviously based on fear of opposition to the scheme from within the medical profession itself, and in the hope of influencing the mind and future actions of the Minister concerned by what would appear to be authoritative and unopposed proposals.

It is not the democratic way to try to make a case without an open forum. And it is to be hoped that the Minister will reject all such approaches.—I am, etc.,

London, W.1. B. BUCKLEY SHARP.

Shall we Nationalize Medicine?

SIR,—Having regard to the general approval which the profession has allowed its representatives to express of: (1) the White Paper and/or its modifications and their implications; and (2) the 100% issue; and in view of: (3) the expressed determination of so many politicians, even those of diverse shades of opinion, to have a National Health Service for political reasons; and (4) the disunity of the profession itself, with its tendency to lose itself in a fog of non-material side issues, its lack of foresight, and its pathetic trustfulness; can any good purpose be served by continuing the farce of discussing what appears to be an inevitability? Or is this regarded as a sort of safety valve?

Will the true story of the negotiations behind the negotiations ever be told?—I am, etc.,

Brookwood, Surrey. H. M. STANLEY TURNER.

Sight-testing Opticians

SIR,—I have been surprised to find that Mr. Preston's letter (*Supplement*, April 28, p. 72) has not been followed by others. It is high time this matter received forceful attention. What would be the reaction of the general practitioner if he found the chemist "testing" his patient's lungs with a stethoscope to decide whether he had diseased lungs or just required a bottle of medicine? Or carrying out a cystoscopy to find out whether there was a papilloma or nothing that would not react favourably to backache pills?

Many a chemist, after years of wishing to do these things, has had the courage to go to the front door and obtain a medical degree. As Mr. Preston says, it is open to any optician to do the same thing. But the insolence of the latter is unbounded. He talks of his profession, of his patients, and of his surgery. He even describes himself as "eye specialist." I reported a specific case of the latter to the General Medical Council recently, and the Registrar referred the report to the Medical Defence Union for investigation. Sir, cannot something be done to put a stop to all this quackery?—I am, etc.,

Liverpool. DAVID RANKINE.

The Experiments in Health Centres

SIR,—The proposed National Health Service intends that health centre experiments be conducted in various areas before the final decision to accept or exclude this feature of the service. No indication has been given as to how or where these experimental centres are to be tried out, whether the doctors in the selected areas are to be invited to take part either as full-time or part-time members, and if they are unwilling so to do whether it is proposed to introduce outsiders into the centres to the detriment of the existing doctors.

If the doctors in the selected areas do agree to accept service, what arrangement is to be made about their existing practices? Will they be taken over with the immediate payment of compensation, and if not, what is proposed? If the health centres prove not to be a success, what is the effect likely to be on the practices concerned?

An authoritative statement on these as well as on other points arising out of this question is surely indicated.—I am, etc.,

London, N.22. S. CHAPLIN.

MEDICAL WAR RELIEF FUND

SIXTY-NINTH LIST

Amount previously acknowledged £57,510 3s. 1d. and £100 3½% Conversion Stock and £40 3% Defence Bonds.

Individual Subscriptions

£2 2s.—Dr. S. Adler, Smethwick (2nd donation); Capt. N. Bickford, R.A.M.C. (16th donation); Drs. Silcock and Airey, Leicester (2nd donation); Mr. A. Dickson Wright, London.

10s. 6d.—Major G. C. Pether, R.A.M.C., B.L.A. (2nd donation).

£18 18s.—Practitioners in East Herts area—per Dr. J. S. Ross (amount previously acknowledged £347 15s. 1d.).

£12.—Stratford Division—per Dr. H. C. Boyde (amount previously acknowledged £53 6s. 6d.).

£3 3s.—Glasgow Division (amount previously acknowledged £394 18s.): Dr. A. A. McManus (4th donation).

£2 2s.—Croydon Division—per Dr. G. Genge (amount previously acknowledged £207 15s. 6d.): Dr. W. D. Glyn James.

£1 1s.—Lincoln Division—per Mr. Bagot Walters (amount previously acknowledged £535 9s.).

£42.—Medical Staff of Harrow and Wealdstone Hospital (amount already sent £128 and £40 3% Defence Bonds).

Local Medical and Panel Committees

£150.—Gateshead (4th donation).

Total: £57,748 5s. 7d. and £100 3½% Conversion Stock and £40 3% Defence Bonds.

Sums for Books for Prisoners of War

Amount previously acknowledged £216 14s. 6d.

Cheques, payable to the Medical War Relief Fund, should be sent to the Hon. Treasurer of the Fund, British Medical Association House, Tavistock Square, London, W.C.1.

Dr. C. L. BATTESON

For some time now it has not been possible to refer to the London Local Medical and Panel Committee without at once calling to mind the name of Dr. C. L. Batteson, its medical secretary. This is hardly surprising, as it will be 21 years in October since he first became the committee's secretary, after having been a member from July, 1919. In the ordinary course of events Dr. Batteson would have retired about the time of the outbreak of war, but at the request of the committee he consented to remain, and has been at his post throughout all these difficult years. He is, however, retiring this coming September, and the committee feels that insurance doctors in London—and some beyond—will wish to show their appreciation of his unfailing service and devotion to their interests by contributing to a fund which has been opened for the purpose. It is hoped to build the fund up so that it worthily represents their regard for him as well as for the work with which he has so completely identified himself. Contributions, which are asked for as early as possible, should be sent to the Treasurer, Batteson Testimonial Fund, London Panel Committee, Tavistock House, W.C.1, the cheques being made payable to the Fund.

H.M. Forces Appointments

ROYAL NAVY

Surg. Lieut. F. B. B. Weston to be Surg. Lieut.-Cmdr.

ARMY

Col. W. Frier, late R.A.M.C., having attained the age for retirement, is retained on the active list, supernumerary.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

War Subs. Major E. C. Murphy to be Major.
War Subs. Capt. R. Lyons to be Capt.

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

War Subs. Capts. W. Dodd and G. J. Ahern have relinquished their commissions on account of disability, and have been granted the honorary rank of Major.

War Subs. Capts. H. B. A. Ratcliffe-Densham, E. L. Ives, and A. H. Lafone have relinquished their commissions on account of disability, and have been granted the honorary rank of Capt.

To be Lieuts.: R. F. Alexander, M. Barry, S. Bayne, J. L. Broadbent, E. Burke, G. F. Cassie, P. R. R. Clarke, A. C. Cobban, T. Debney, T. Donovan, G. K. Emsley, G. G. Ferguson, R. Lindop, J. McKenzie, K. C. McKeown, I. D. Michie, R. M. Milne, C. N. Minto, R. Moore, M. B. O'Sullivan, C. R. Palmer, J. A. Paterson, L. A. Quirk, E. T. Radford, F. P. Raper, J. Roche, F. G. Smiddy, R. Spink, A. W. Thomson, E. Troensegaard-Hansen, D. E. Walker, D. I. Williams, T. N. V. Potts, P. V. Pritchard, and J. E. Sleigh.

WOMEN'S FORCES

EMPLOYED WITH THE R.A.M.C.

The following M.O.s have been granted commissions in the rank of Lieut.: Kathleen M. Fox, Ursula M. Kirk, and Patience E. Barclay.

ROYAL AIR FORCE

Gp. Capt. Sir John McIntyre, K.B.E., C.B., M.C., has reverted to the retired list, resuming the rank of Air Vice-Marshal.

Flying Officer H. A. N. Hamersley has ceased to be seconded to the Royal Hampshire County Hospital.

RESERVE OF AIR FORCE OFFICERS

Squad. Ldr. J. E. Dalton has relinquished his commission on appointment to the R.C.A.F.

Squad. Ldrs. (Temp.) J. P. F. Whelan and S. Paul have been granted the rank of War Subs. Squad. Ldr.

ROYAL AIR FORCE VOLUNTEER RESERVE

Squad. Ldr. (Temp.) F. G. Mundell has been granted the rank of War Subs. Squad. Ldr.

Fl. Lieut. (Temp. Squad. Ldr.) D. Skinner has relinquished his commission on account of medical unfitness for Air Force service, retaining the rank of Wing Cmdr.

Fl. Lieuts. (Temp. Squad. Ldrs.) D. D. Morrell, O.B.E., S. L. W. Erskine, and P. B. Atkinson have relinquished their commissions, retaining the rank of Squad. Ldr.

Fl. Lieut. W. N. Maclay has been granted, the rank of War Subs. Squad. Ldr.

Fl. Lieut. D. S. Napier has resigned his commission, retaining the rank of Squad. Ldr.

Fl. Lieut. F. A. Thompson has relinquished his commission on account of medical unfitness for Air Force service, retaining his rank.

Fl. Lieut. I. D. Gebbie and Flying Officer (Temp. Fl. Lieut.) P. C. S. Unwin have relinquished their commissions on appointment to the R.N.Z.A.F.

D. S. Cadman to be Fl. Lieut. (Emergency).

Flying Officers W. F. Buchanan, D. D. H. Craig, H. H. Firth, S. S. Rose, and E. A. Waldron to be War Subs. Fl. Lieuts.

To be Flying Officers (Emergency): H. O. C. Gammeltoft, J. D. G. Turner, and W. L. Burrowes

WOMEN'S FORCES

EMPLOYED WITH THE MEDICAL BRANCH OF THE R.A.F.

Flying Officers A. E. D. Cathcart, M. K. Murray, and E. D. L. Simpson to be War Subs. Fl. Lieuts.

INDIAN MEDICAL SERVICE

Lieut.-Col. R. C. Phelps has retired.
Major C. K. Lakshmanan to be Lieut.-Col.

BRITISH MEDICAL ASSOCIATION

Areas of Aldershot and Basingstoke, and Winchester Divisions

Notice is hereby given by the Council of the Association to all concerned that it is proposed to transfer the Civil Parish of St. Mary Bourne from the area of the Aldershot and Basingstoke Division to the area of the Winchester Division.

Any member affected by this proposal and objecting thereto is requested to write to the Secretary of the Association by July 21, 1945, stating the objection and the ground therefor.

CHARLES HILL,
July 7, 1945. *Secretary.*

Branch and Division Meetings to be Held

DORSET DIVISION.—At Old Shire Hall, High West Street, Dorchester, Sun., July 8, 2.45 p.m., Meeting. Agenda: Discussion of Annual Report of Council, etc. Dr. F. S. Cooksey: Rehabilitation. All medical men in the area of the Division are invited.

RECONDITIONED EX-SERVICE CARS

The B.M.A. is informed that as new cars are now being made available to doctors, who receive a very high priority in the scheme of allotment by licence, the Minister of War Transport considers that he can no longer give special preference to them in the supply of reconditioned ex-Service cars. At present there are very few reconditioned cars, and many special cases have also to be considered—including those of nurses in rural areas—in which the funds available to support essential work are limited. The matter is being kept under review and will be adjusted in any future change of circumstances.

POSTGRADUATE NEWS

The Fellowship of Medicine announces: (1) Primary F.R.C.S. course: lecture-demonstrations in physiology, pathology, and bacteriology, Mon., Wed., and Fri., 6 p.m. to 8.15 p.m., Aug. 13 to Oct. 12. (2) Week-end course in medicine and surgery, at Hampstead General Hospital, all-day, Sat. and Sun., July 21 and 22.

WEEKLY POSTGRADUATE DIARY

FELLOWSHIP OF MEDICINE, 1, Wimpole Street, W.—*South London Hospital for Women:* all-day, Sat. and Sun., July 14 and 15, Week-end course in obstetrics and gynaecology.

DIARY OF SOCIETIES AND LECTURES

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W.—*Mon.*, 4 p.m., Clinical meeting at St. George's Hospital; 5 p.m., Discussion of cases.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTHS

HILL.—On June 29, 1945, at the Red House Hospital, Harpenden, to Marion, wife of Charles Hill, M.D., a son.

SINCLAIR.—On June 13, 1945, at Beverley, to Nancy (*née* Steward), wife of Dr. Stuart A. Sinclair, a daughter.

WALLACE.—On June 9, 1945, at Simla, to Doris Barbara Wallace, F.R.C.S. (*neé* Brown), the wife of Major R. J. Wallace, a daughter.

DEATH

JOHNSTON.—Gerald Herbert, late of Brooke House Clapton, London, died at Paarl, Cape Province S.A., on May 27, 1945, aged 76 years.

There will shortly be published an advertisement for a Scottish Secretary of th British Medical Association to succeed Dr Robert Craig, who has reached the age o retirement. A considerable period will b allowed for the sending in of application so as to enable practitioners serving in th Forces, wherever they may be, to apply.

HEARD AT HEADQUARTERS

Range of Professional Income

Doctors have the reputation of not being good business men, but any stranger who looked in at the joint meeting of the Insurance Acts and General Practice Committees of the B.M.A. the other day would have found it difficult to sustain that allegation. The meeting was considering the memorandum which is being presented to the Spens Committee, which, it will be remembered, is concerned with the range of total professional income of a doctor in any publicly organized service of general medical practice. For two and a half hours there was a hard-headed business discussion. Members were evidently anxious not to overweight the case with claims which might easily be attacked, and at the same time they sought to allow for every factor that can reasonably be brought forward in determining what may be the financial status of the general practitioner for a generation or more.

I understand the memorandum is not to be published yet, and in this slight comment no figures will be cited. The Association has had the advantage of the advice of Dr. Bradford Hill, Reader in Epidemiology and Vital Statistics at London University, as to the steps it should take to secure information concerning the range of income of general practitioners during the three years immediately before the war. That income, of course, as is generally agreed, was at too low a level, especially the part of it which came from National Health Insurance. The capitation fee award in 1937 gave great dissatisfaction, and—it is old history now—the Association was about to seek a revision, even within two or three years of the award, when the war broke out. The figures which have now been obtained suggest that not only was the award based on a gross underestimate of the itemized service given by insurance practitioners and of the proportion of practice expenses to income, but the figures which the Association put forward at that time were also themselves an underestimate in both respects.

The method now adopted has been to determine what the pre-war range of income should have been and then to scale it up so as to represent a proper range of income in the post-war years. There are, of course, many unpredictable factors. Who can tell what the cost of living will be or the value of money? Who can say how practice costs will rise after the war, and what ratio they will bear to gross income? One thing which must be—and has been—taken into account is not only the high cost of medical education, which often mortgages the early years of practice, but also the relatively late age at which a member of the medical profession becomes an earner. The greatest number of doctors qualify at the age of 24, rather fewer at 23, and rather fewer again at 25, but qualification does not mean the beginning of properly remunerated work. An interval of one year, sometimes two, in many cases longer, may separate qualification from entry into general practice. Another consideration is the demands upon the doctor's energy. Not for him the stipulated hours, nor the long vacations which teachers, the Civil Service, and the members of the legal profession enjoy. And then again, in deciding ranges of incomes some allowance must be made for the reward of ability out of the common and of exceptional industry. All these things and many others have been taken into account in the evidence tendered to the Spens Committee, but the evidence so far prepared is not expected to be the last word. It is hoped that the Association will have an opportunity again, after other evidence has been given, of clinching certain arguments and perhaps of answering others which may have been brought forward in a contrary sense.

Speech Therapists

A few weeks ago attention was drawn to the first annual conference of the College of Speech Therapists and to the growing importance of this particular branch of medical auxiliary work. A further instance of its importance is to be found in the reference to duly qualified speech therapists in the new draft regulations published by the Ministry of Education. Under these regulations education authorities are required to provide various types of special treatment for school-children, and it is laid down that for a child suffering from speech defect, other than an aphasic child, special training and treatment by a qualified speech therapist shall be provided. One of the difficulties is that, for some time at any rate, there will not be enough duly qualified speech therapists to undertake this service. The Board of Registration of Medical Auxiliaries, at B.M.A. House, has just published a new register of speech therapists which will help, but it shows what blanks there are. There are no speech therapists at all in the counties of Cornwall, Cumberland, Dorset, Hereford, Huntingdon, Rutland, and Wiltshire, and only one each in Berkshire, Leicestershire, Lincolnshire, Norfolk, Shropshire, Somerset, Suffolk, and Westmorland. On the other hand, Surrey has 12, and the district known as London, W.1, has 12 also.

A Question of Grouping

One of the apparently insoluble problems is to get a really satisfactory grouping of Panel Committees for representation on the Insurance Acts Committee. The late Sir Henry Brackenbury, when he was chairman of the committee, tried his hand at constructing a plan of equitable grouping, Dr. Dain did the same, and now the task has fallen on the present chairman of the committee, Dr. Gregg. The attempt has been to compromise between a territorial basis and a basis of medical populations, and it cannot be done. All sorts of anomalies are opened up. The matter has arisen again in connexion with what is known as Group J. This includes areas as far apart as Buckinghamshire and Bristol, yet the total number of insurance doctors included is very little different from that in Group L, which is more or less territorially compact, consisting of the counties of Cornwall, Devon, and Somerset, with one practitioner in the Isles of Scilly. Bristol is pressing its application for a new grouping which would consist, along with Bristol, of the counties of Gloucester and Somerset, and would give the West Country better representation.

Refraction Work

Mr. John Foster, of Leeds, who presented the Oxford Ophthalmological Congress last week with a review of 9,000 out-patient cases coming to the eye department, said that 21% of them proved to be purely refraction cases, and these occupied 75% of the time of the department. Mr. Foster assailed what he called the "ophthalmic myth of the twentieth century"—"that correct glasses preserve, and incorrect glasses damage, the sight; that the majority of headaches have an ocular cause; and that work under artificial light necessarily strains the eyes." But in view of the fact that a National Medical Service may be in the offing, and of the number of doctors (including ophthalmologists) needed to run it, he thought the excessive amount of refraction work required to be undertaken by eye departments should be seriously considered. Another speaker at the Congress, Mr. Heckford, asked why so many ophthalmic surgeons did give glasses. One could understand the sight-testing opticians saying that those who came to them must have glasses, but why should the surgeon surrender so easily to the demand of the patient, spoken or unspoken, for glasses? Often some friendly advice would be far better. He pleaded with the ophthalmologist to be "more of a doctor and less of a mechanic."

Consultation

This story was vouched for at the Oxford Ophthalmological Congress. To the eye department of the hospital in a great Northern town came a patient with the following note: "To Eye Department, — ? General Practitioner." The patient was examined and nothing was found to be wrong with his eyes, and the following note was returned: "To General Practitioner, — ! Eye Department."

BRITISH MEDICAL ASSOCIATION

ANNUAL REPRESENTATIVE MEETING, 1945

The Annual Representative Meeting of the British Medical Association will be held at B.M.A. House, Tavistock Square, London, W.C.1, on Tuesday, July 24, and succeeding days.

MOTIONS BY DIVISIONS AND BRANCHES

PRELIMINARY

Board of Registration of Medical Auxiliaries

Motion by EXETER: That, with reference to paragraph 7 of the Annual Report of Council, the Government be pressed to establish proper bodies for the regulation of standards of entry to, and registration of members of, medical auxiliaries' organizations.

Public Relations

Motion by WESTMINSTER AND HOLBORN: That the meeting considers the work of the public relations adviser should be pressed with more vigour in view of the unsympathetic attitude of the Press.

Negotiating Committee

Motion by TYNESIDE: That no further discussions on Government health services be made by the A.R.M. until the Spens Committee's report on the financial aspect of the services is available.

Motion by DENBIGH AND FLINT: That the custom of buying and selling practices cannot be retained in any comprehensive health service without prejudice to the interest of the profession and the public, and that this meeting favours abolition of the custom at the outset, provided that agreement can be reached not only regarding compensation but regarding security of tenure of existing practices within an administrative structure and under terms of service acceptable to the profession.

Motion by EAST NORFOLK: That the national medical service should not be started until sufficient medical personnel are available to run it.

Motion by EAST NORFOLK: That, in order to ensure executive power for the professions concerned in working the proposed health service, the possibility of its control and administration by a separate corporate body be given reconsideration as a matter of urgency.

Motion by EAST HERTS: That the Council be requested to consider every possible means of instituting collaboration between the Association and all medical bodies producing reports concerning the National Health Service before such reports are published.

Motion by PERTH: That in any National Health Service the right to opt out should be retained, and any patient taking advantage of this right should be entitled to the refund of a proportion of his contributions.

Motion by NEWCASTLE-UPON-TYNE: That in the opinion of this meeting the B.M.A. be urged to expedite the findings of the Spens Committee so that its conclusions are before the medical profession before it decides to take part in the proposed new health service.

Motion by KENSINGTON: That inadequate opportunity is being given to medical practitioners serving with H.M. Forces to express their views on the future medical services.

GENERAL PRACTICE

Certification

Motion by SHROPSHIRE AND MID-WALES: That this meeting is of the opinion that there should be no payment for certificates by the patient or employer, but that in the future planning payment for all certificates should be included in the capitation fee.

Motion by EAST HERTS: That the question of certification in general should be reviewed at the earliest possible moment; and that the use of one certificate—either a modification of the existing N.H.I. certificate or the present Ministry of Labour one, E.D. 652—should suffice for visual demonstration to minor authorities. It should be stated clearly on such a certificate that the fee involved should be reimbursed by the authority requiring the certificate.

Motion by WESTMINSTER AND HOLBORN: That in view of the fact that the Ministry of Pensions has agreed with the B.M.A. that a fee of 5s. shall be payable by the Ministry for the completion of the form issued by them concerning the previous medical history of an applicant for a pension, such form shall state that this fee is so payable, and give the name of the officer of the Ministry to whom application should be made if the fee is not duly paid.

Capitation Fee for Ex-regular Firemen

Amendment by BRIGHTON: That, with reference to paragraph 14 of the Council's Report, this arrangement be not ratified, on the grounds that it is an unsatisfactory method of payment as it involves the principle of unlimited liability to service on the part of the doctor with limited liability of payment by the employing party.

Election of Direct Representatives on the G.M.C.

Motion by HENDON: That, with reference to paragraph 20 of the Annual Report of Council, the Representative Body is firmly of the opinion that the time is now ripe for the Council to press for the amendment of the Medical Acts to secure an increased and an adequate representation of the profession by direct representatives.

Post-war Financial Aid

Motion by HENDON: That, while welcoming the Report of the Council on a scheme to enable doctors without capital to purchase and establish themselves in a civilian practice on their demobilization, the Representative Body is nevertheless of the opinion that special arrangements should be made to inform medical officers of the facilities that the Association is able to sponsor and to interview and advise demobilized officers on the various professional and business difficulties peculiar to the acquisition of a civilian practice.

Motion by WEST SUFFOLK: That, with reference to paragraph 12 of the Annual Report of the Council, the Association considers the creation of a fund to be used for the guarantee of loans to medical men wishing to purchase practices and thus enable them to borrow at a lower rate of interest than would otherwise be possible.

Motion by WEST SUFFOLK: That an appeal be made to all medical men throughout the country for generous payments to the Medical War Relief Fund in order to enable that fund to assist young medical men returning from service and wishing to start in practice.

Doctors' Cars

Motion by WESTMINSTER AND HOLBORN: That the meeting considers that in view of the price of new cars the supply of second-hand reconditioned cars should be augmented.

NATIONAL HEALTH INSURANCE

Sickness Benefit in Pregnancy

Amendment by CITY OF EDINBURGH: That in paragraph 22 of the Annual Report of Council the words following the word "confinement" in line 9 should be omitted.

PUBLIC HEALTH

Education Act

Motion by DERBY: That school medical reports shall be made available only to the patients' own doctors. Other medical officers requiring school medical reports should first obtain the written consent of the parents or guardians.

Motion by HENDON: That, with reference to paragraphs 25 and 26 of the Annual Report of Council, the Representative Body places on record its grave dissatisfaction with the failure of the late Minister of Education to receive favourably the proposals of the Council of the Association on the inability of the profession to implement at present and for some time to come the operation of Section 48 (3) of the Education Act, 1944, and urges the Council to warn the Government of the need to suspend the operation of this section until agreement has been reached on the terms and conditions applicable to the establishment of a National Health Service.

Milk

Motion by ISLE OF WIGHT: That this A.R.M. is of opinion that steps should be taken *immediately* to ensure that all milk supplied to children at school should be safe milk.

National Maternity Service

Motion by EXETER: That, with reference to paragraph 32 of the Annual Report of Council, those practitioners who have had extensive and lengthy practical experience in midwifery should *ipso facto* be eligible to sit for the diploma in obstetrics and gynaecology without the necessity of having held a resident post in midwifery, and that this suggestion be brought to the notice of the College (R.C.O.G.).

Motion by HENDON: That, with reference to paragraph 32 of the Annual Report of Council, this Representative Body is determined to pledge itself to resist the introduction of any new criteria of qualification in midwifery that would, if officially recognized, deprive any registered medical practitioner of the right to practise midwifery in a national service.

Motion by BUCKS: That all ante-natal examinations should be carried out by the doctor who is eventually responsible at the confinement.

Equal Pay and Cost-of-living Bonus

Motion by PLYMOUTH: That (1) the British Medical Association reaffirms the policy that men and women medical practitioners shall receive equal pay; (2) it shall be understood that this policy shall include cost-of-living bonus; (3) where authorities or other bodies have not paid the same cost-of-living bonus to women as to men they should take immediate steps to rectify the position and the rectification shall be retrospective.

Motion by NEWCASTLE-UPON-TYNE: That in the opinion of this meeting the principle of equal pay and bonus, remuneration and emoluments for men and women should be maintained as the policy of the B.M.A.

Motion by KENSINGTON: That the pensionable age for medical women should be the same as that for medical men.

HOSPITALS

General Practitioner Hospitals

Motion by MID-CHESHIRE: That this meeting welcomes the proposed action of the Council on the preservation and development of small general hospitals staffed by general practitioners, and desires to emphasize the value of these hospitals to the community, especially if adequately equipped with ancillary services.

Part-time Consultants and Specialists

Motion by ISLE OF WIGHT: That this A.R.M. requests Council to inform part-time consultants and specialists on hospital staffs what steps are being taken to safeguard their position and future employment.

Medical, Nursing, and Domestic Staffs

Motion by NORTH-EAST ESSEX: That steps be taken to obtain the release of nursing and medical personnel and the direction, if necessary, of domestic help for the voluntary hospitals and nursing homes to deal with the civilian population.

ORGANIZATION

Scottish Assistant Secretary

Motion by CITY OF EDINBURGH: That the pressure of work in the Scottish Office of the Association is now such as to require the appointment of an assistant secretary, and that such an appointment should now be made.

Regional Secretaries

Motion by LINCOLN: That regional secretaries should be selected only from those who have been in general practice for fifteen years (each year of war service to count as one year of practice); and that they should be under 50 years of age on appointment.

Motion by NEWCASTLE-UPON-TYNE: That in the opinion of this meeting the headquarters of the North-Eastern regional secretary should be in Newcastle-upon-Tyne.

NAVAL AND MILITARY

Postgraduate Study for Demobilized Doctors

Motion by WESTMINSTER AND HOLBORN: That this meeting considers that the present offer to a Service medical officer previously engaged in general practice of 2 weeks' refresher course on demobilization during which time he is offered subsistence allowance and a small sum per week for the provision of a locumtenent is totally inadequate, and that a period of at least 2 months should be allowed, during which time adequate financial arrangements should be provided.

Motion by MID-CHESHIRE: That this meeting considers the Government proposals for postgraduate study for practitioners returning from the Forces are inadequate and should be improved.

Release of Service Practitioners

Motion by BRIGHTON: That in view of the urgent need for medical practitioners in civilian practice pressure should be brought on the Services to release more doctors at an early date.

OTHER MOTIONS

Speaker and Deputy Speaker at Association Conferences

Motion by BIRMINGHAM: That Council be instructed to investigate the desirability of appointing a Speaker and Deputy Speaker in place of the Chairman and Deputy Chairman of the Representative Body to take charge of all conferences held under the aegis of the B.M.A.

Night Calls for Emergency Cases

Motion by KENSINGTON: That, wherever practicable, a night call for emergency cases shall be deemed to be one made between 9 p.m. and 9 a.m.

Supplementary Clothing Coupons

Motion by LINCOLN: That negotiations be opened with the Board of Trade for the provision of supplementary clothing coupons for all doctors in active practice to cover the purchase of such items as operating gowns, surgeons' coats, and overalls.

Representatives at A.R.M.

Motion by READING: That so long as the Annual Representative Meeting is conducted solely through the Chair this Division does not think it worth while sending Representatives to it.

Service men and women during their 56 days' final leave before release from the Forces will be entitled to hospital treatment in the same way as members of the Forces on ordinary leave. Medical benefit (i.e., general practitioner treatment and medicine) will be provided for those who were insured under the National Health Insurance Acts during service from the date they begin final leave instead of the date of discharge or final release as at present. Insurance doctors have been informed that hospital treatment needed by an insured person during final leave will normally be given at the nearest Service or E.M.S. hospital.

Correspondence

Voting at Representative Meetings

SIR,—I have represented my Division at the last two Representative Meetings, and have declined renomination. My reason is that at these meetings, while there is no obstacle to free speech, every possible obstacle is thrown in the way of free speech. The most effective of these obstacles is the freedom allowed to the Chairman of Council not alone to sum up the debate but also to direct the meeting as to how it should vote. The confidence in this distinguished member of the B.M.A. is so great, the esteem in which he is held so high, that the meeting almost invariably follows his directions. The result is that, the voting reflects not so much the opinion of Divisions as the opinion of the Chairman of Council. I venture to suggest that this is not sound.

Even the passing of a motion by a Representative Meeting does not ensure that it will be subsequently pressed with vigour. In December two highly important motions were passed—Nos. 112 and 386 on the agenda. The first expressed the view that, instead of at once introducing a "comprehensive National Health Service," progress should be gradual, by evolution from the present National Health Insurance. The second advocated that legislation for the National Health Service should be entirely separate from that for "social security." The subsequent fate of both motions is obscure. One gathers that they were presented to the Minister and rejected by him. No definite report on them was, to my knowledge, made to the May meeting; no instructions asked for as to whether they should be pressed again to the extent of breaking off of negotiations if they were again not agreed to. One is left, rightly or wrongly, with the conclusion that motions passed by Representative Meetings will not be pressed with determination unless they are in accordance with the policy of B.M.A. Headquarters. This seems to render the proposing of resolutions by Divisions rather a futile procedure.

I have used above the phrase: "breaking off of negotiations." Great use was made of the danger of doing so as a bogy to influence the voting, so much so that one speaker begged the Chairman of Council not to use it again. Yet it is obviously a bogy. The Minister has much more need of us than we of him. We can perfectly well run a comprehensive National Health Service without him; we are doing so at this very moment. He cannot attempt to do the like without our co-operation.

Lastly, there is a regrettable inclination at these meetings to shirk main issues and concentrate on details. One such main issue is how to ensure that any agreement made with us now by the Minister will not subsequently be violated by him with the support of a Parliamentary majority or simply by Regulation. This danger was the subject of a comprehensive motion—No. 219 of the May agenda. It was quietly shelved by being "referred to Council." Yet its importance is manifest.

One is left with the impression that Representative Meetings have very largely lost their original character. They were, one imagines, instituted for the purpose of instructing Headquarters as to the wishes of the profession at large. Their function now seems to be to instruct the profession at large as to the wishes of Headquarters—a curious reversal. It may be that Headquarters know better what is good for us than we do ourselves; it is at least arguable, and they themselves undoubtedly think so. But then let this claim be openly made and all pretence be dropped. Let Headquarters state frankly that they consider their function to be rather to guide us than to accept guidance from us. Then we shall at least know exactly where we are, know that for good or for ill we are being driven slowly but inexorably by our own people into the acceptance of a State-controlled medical service.—I am, etc.,

Andover. J. A. BALCK-FOOTE.

Medical Demobilization

SIR,—It has now been announced that Naval medical officers cannot expect to be released even at the same rate as other Naval officers, all of whom are having to remain mobilized longer than the other Services. Although we comprise a relatively small proportion of Service medical officers this is manifestly a very great hardship to many of us. Not only do we get less clinical work because of the nature of our jobs than most other Service and E.M.S. medical officers, but this is exacting too great a sacrifice after six years of mobilized service.

Can no representation be made that in view of the statement that the Navy has "to bear the brunt of the war in the Pacific" there should be an urgent attempt to release those of us who have completed four years' service? Medical officers who served in the last war would surely agree that this period is quite long enough.—I am, etc.,

J. B. W. HAYWARD,
Surg. Lieut.-Cmdr., R.N.V.R.

⁂ The Secretary of the Central Medical War Committee writes: The Central Medical War Committee is awaiting information from the Government as to the relative rates of release in the three Services. So far as Government policy permits, it will do its utmost, by continued recruitment of civilian doctors, to accelerate release from all the Services. For doctors to be released in their groups at the same time as the Army generally is released in those groups would, of course, mean faster release for doctors than for the Army generally. There is a high proportion of medical officers in the early groups.

SIR,—I am a "general duty officer," and I have read with great care Sir James Grigg's reply to Major C. Taylor on May 29 (*Journal*, June 16, p. 859). There are seven sentences with such a wealth of contradiction within fifteen lines of print that I know not where I stand, nor can I estimate if I have any chance of release from the Army or not. If the editor of the *Journal* has all his A's and B's in their right places, what does the Minister for War mean? When will "age-and-service group" 15 become free men again?—I am, etc.,

"PUZZLED."

⁂ Reference to *Hansard* shows that one of the statements of the Minister was incorrectly reported. Sir James Grigg said: "I think that the need of the civil population for doctors is much more likely to be met under Class A than Class B." The vast majority of releases will be in this class.—ED., *B.M.J.*

SIR,—I received a few days ago the *Journal* for April 14 and observe that Capt. F. Harris, R.A.M.C., asserts in a letter in the *Supplement* (p. 57) that "the great majority [of civilian doctors of military age] . . . would give a great deal to be able to join one of the Services." If there is a medical practitioner willing to exchange places with me, I shall be only too delighted. Capt. Harris must have been extremely lucky in finding that only a minority of us have a grievance. In my experience every emergency commissioned doctor worth his salt as a doctor is dissatisfied with the conditions of service. Only those who admit that clinical medicine has no interest for them express themselves satisfied in the many administrative jobs that the Army offers to the doctor who is not interested in medicine proper.

Another of your correspondents, "Embee," in the same issue appears to imagine that about the only advantage of E.M.S. over uniformed service is that it "permits of what is called 'home life' to a limited degree." He does not appear to realize that in addition the E.M.S. doctor is working with patients and is continually increasing his knowledge in the particular branch of medicine in which he is interested; and he is assured that he will not be sent at 24 hours' notice a 1,000 miles from his home in order to live in draughty bamboo huts or (even worse) fox-holes, for which he has to pay to the Army "rent" at £3 or more a month out of his already meagre pay.

I wish finally to conclude by saying that in my opinion medical demobilization should be speeded up by exchanges between those who have so far escaped service (whatever be the circumstances, justifiable or not) and those who are now in service over-seas; by fixing the maximum number of doctors permitted to be away from real medicine at one time; and finally by legislation forbidding the use of qualified practitioners in the role of glorified clerks.—I am, etc.,

N. N. TERESHCHENKO,
Bombay. Capt., I.M.S.

SIR,—Medical demobilization remains in a highly unsatisfactory state, and in spite of official explanations many of us in the Services are far from being convinced that all that could be done is being done. I wonder if anyone in the E.M.S. can quote the like of the following.

I joined up as a volunteer in September, 1939, since when I have spent six months with the B.E.F. in France, two years and ten months with the M.E.F., and ten months in the B.L.A. Now, while still in the B.L.A., I have been warned for return to the U.K. for onward posting to the Far East. This means that though married, in Group 21, with a total of more than four years' oversea service, I am now faced with a further probable two years abroad, making six in all. I am assured that I shall be demobilized with my group when the time comes, wherever I may be stationed. But—and it is a very big but—as a specialist I do not go out with my group, but only if and when a replacement is available. Past experience has taught me that waiting for a replacement is a long, thankless, and tedious pastime. Indeed, on this occasion we have already received ample evidence that replacements will be few and far between.

It might well be suggested that it is pointless and uneconomical to post anyone to the Far East within a few months of his intended demobilization. But I contend the authorities know perfectly well that in practice it doesn't work out like that, because one simply doesn't return in "just a few months." In all, I have only been able to spend seven weeks with my wife since the outbreak of war. Our 4-months-old baby will be walking and talking before he knows his own father. Is this further social catastrophe really necessary at this stage of the war?

Surely I may be forgiven the scepticism with which I receive the platitudes from official sources and the assurances from my colleagues in the E.M.S. that it is I who am lucky and they who, overworked and both physically and mentally tired, are so much in need of a rest. Were it in my power I would gladly change places with them and shoulder their heavy burdens, thus enabling them to obtain at long last their well-earned rest. I can at least guarantee that they will be well and truly separated from their families, but, alas! I cannot guarantee that it will be quite such a rest. Where there's a will there's a way, and I feel sure replacements could be found. Unfortunately one is left wondering whether the easier task of exploiting those already shackled to their uniforms is not being taken. For obvious reasons I must beg to remain anonymous.—I am, etc.,

"LIFE SENTENCE."

*** The Secretary of the Central Medical War Committee states: The C.M.W.C. is doing everything possible to recruit specialists as substitutes for those who cannot be released without replacement. Its aim is to secure the release of the greatest possible number of medical officers in their turn. The posting of an officer in Group 21 to the Far East at this stage does not justify the conclusion that he will be retained there beyond the date of release for his group.

Guide to B.M.A. Administration

SIR,—I wonder if you would consider publishing, perhaps in the form of a small special supplement to the *Journal*, a short guide to the administration side of the B.M.A.? I suggest that a glossary of terms used, together with a short explanation of the activities they denote, would meet the case.

I have noticed in conversation with younger colleagues that many of them have not the remotest idea of the meaning of phrases like "Annual Representative Meeting," "Negotiating Committee," "Representative Body," "Organization Committee" and so forth, and I must confess that I have found my own knowledge a trifle hazy when I have tried to enlighten them. At a time when (we hope) numbers of medical men will once more be becoming active members, I believe that a brief explanation of the working of the whole B.M.A. organization from Branch to Building Committee would be very welcome.—I am, etc.,

G. N. WOOD,
Major, R.A.M.C.

*** The *B.M.A. Annual Handbook* contains the necessary information. Its publication was suspended at the outbreak of war, but a shortened form is now being prepared for publication at the beginning of the autumn. To bridge the gap it is hoped to publish in the *Supplement* an article dealing with Major Wood's points.

MEDICAL CANDIDATE FOR PARLIAMENT

The name of the candidate below was omitted from the list published in the *Supplement* for June 30:

R. N. TRONCHIN-JAMES, Reading, Liberal. (1942). Fl. Lieut., R.A.F.V.R. Formerly house-physician, Middlesex Hospital. Psychiatrist, E.M.S.

POSTGRADUATE NEWS

The Fellowship of Medicine announces the following course in preparation for the primary F.R.C.S. examination: Lecture-demonstrations in anatomy, physiology, pathology, and bacteriology: Mon., Wed., and Fri., 6 p.m. to 8.15 p.m., Aug. 13 to Oct. 12. Detailed syllabus will be sent on application to the Fellowship of Medicine, 1, Wimpole Street, W.

A series of special Edinburgh Postgraduate Lectures has been arranged, under the auspices of the Honyman Gillespie Trust, to be given in the West Medical Theatre of Edinburgh Royal Infirmary on Thursdays at 4.30 p.m. from July 19 to August 9 (both dates inclusive) and on August 30 and Sept. 13. The lectures are open to all graduates and senior students. Details will be published in the postgraduate diary column of the *Supplement* for the appropriate weeks.

WEEKLY POSTGRADUATE DIARY

FELLOWSHIP OF MEDICINE, 1, Wimpole Street, W.—*Hampstead General Hospital:* all-day, Sat. and Sun., July 21 and 22. Week-end course in medicine and surgery for general practitioners.

EDINBURGH POSTGRADUATE LECTURES.—At West Medical Theatre, Edinburgh Royal Infirmary, *Thurs.*, 4.30 p.m. Prof. J. T. Mackie: Basis of Penicillin Therapy.

DIARY OF SOCIETIES AND LECTURES

ROYAL SOCIETY OF MEDICINE.—*Tues.*, 5 p.m., General meeting of Fellows. *Wed.*, 5 p.m., Section of Proctology.

BIOCHEMICAL SOCIETY.—At School of Medicine, Thoresby Place, Leeds, *Fri.*, 2.30 p.m. Communications.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W.—*Mon.*, 8.30 p.m., First Lettsomian Lecture on "The Present Position of Surgery in Haemorrhage from Peptic Ulcer," by Surgeon Rear-Admiral G. Gordon-Taylor; *Wed.*, 8.30 p.m., Second Lettsomian Lecture on "Some Less Usual Causes of Severe Gastro-intestinal Bleeding" by Surgeon Read-Admiral G. Gordon-Taylor.

B.M.A.: Diary of Central Meetings

JULY

24. Tues. **Council**, 11 a.m.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. for 18 words or less. Extra words 3s. 6d. for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.

BIRTHS

CARR.—On July 4, 1945, at Allington House, Ipswich, to Stella M. Carr, M.B., B.S. (*née* Vertigan), wife of Surg. Lieut. R. Colin Carr, R.N.V.R., a son.

ROBERTSON.—On July 5, 1945, in Edinburgh, to Rosemary, wife of Surg. Lieut. P. A. M. Robertson, R.N.V.R., a son.

TAYLOR.—On June 16, 1945, to Capt. and Mrs. Kenneth H. Taylor, the gift of a daughter.

MARRIAGES

DAWSON—ROSS.—On June 28, 1945, at the Parish Church, Lochgilphead, by the Rev. Harry G. Miller, B.D., Capt. James Stewart Dawson, R.A.M.C., elder son of Mr. and Mrs. James Dawson, 123, Weirwood Avenue, Garrowhill, Glasgow, to Alison Hilda, youngest daughter of Dr. and Mrs. Donald Ross, Tigh-na-Linne, Lochgilphead.

DEATHS

COLLS.—On Feb. 15, 1945, at St. Albans, Percy Cooper Colls, M.R.C.P., M.R.C.S., late of Benenden, Cranbrook, Kent.

PANTON.—Suddenly, on July 1, 1945, John Allison Panton, M.D., Ch.M., F.R.C.S., of 36, Hoghton Street, Southport. No letters or flowers, please Cremated at Manchester.

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.

B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.

A—Whole-time resident house appointments open to practitioners without previous experience.

B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

STATES OF JERSEY, General Hospital.—Applications are invited from duly qualified and registered medical practitioners, including practitioners within three months of qualification, for the appointments of TWO JUNIOR ASSISTANT RESIDENT MEDICAL OFFICERS in the General Hospital, Jersey. Appointment will be for six months in the first instance, but is renewable. Salary £250 per annum, with full board, lodging, and laundry. There are other emoluments for certificates under the local Social Assurance, amounting to £50 per annum. One practitioner will be expected to do surgical duties, the other medical. Taxation on the island is much lower than in England. Applications to be forwarded to R. N. McKinstry, Medical Officer of Health, Public Health Office, Royal Square, St. Helier, Jersey, C.I.

BURGH OF KILMARNOCK. Maternity Hospital. RESIDENT MEDICAL OFFICER (B1).—Applications are invited for the appointment of a Temporary Resident Medical Officer (B1) at the Burgh Maternity Hospital, Kilmarnock. The appointment is open to registered medical practitioners, who must be single and have had experience in obstetrics. Suitably qualified R and W practitioners holding B2 or B1 appointments are invited to apply, but they must have obtained the sanction of the Scottish Medical War Committee to their application. The salary payable will be at the rate of £350 per annum, rising subject to satisfactory service, by annual increments of £25 to a maximum of £450 per annum, plus war bonus and free board, lodging, and laundry. The person appointed will be on the staff of the Medical Officer of Health and will require, in addition to the duties of Resident Medical Officer at the Maternity Hospital, to undertake such other duties as may be assigned to him/her. The appointment will be terminable by two months' notice on either side. Applications, stating when at liberty to commence duty, enclosed in envelopes endorsed "Resident Medical Officer," must be lodged with the Subscriber immediately.—W. L. Walker, Town Clerk, Council Chambers, Kilmarnock.

CITY OF STOKE-ON-TRENT. CITY GENERAL HOSPITAL. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners (single, male or female), including R and W practitioners who now hold A posts, for the appointment of Assistant Resident Medical Officer (B2), at the City General Hospital, Stoke-on-Trent. If offered to an R or W practitioner the appointment will be limited to a period of six months, otherwise will be for a period of one year. The salary is at the rate of £250 per annum, plus bonus, with full residential emoluments. The Hospital, which is an Emergency Hospital, has approximately 1,200 beds, and there is excellent scope for medical, surgical, and obstetrical work.—Applications endorsed "Medical Officer, City General Hospital," to be sent to the undersigned immediately.—Harry Taylor, Town Clerk.

COUNTY BOROUGH OF BIRKENHEAD. Department of the Medical Officer of Health. Birkenhead Municipal Hospital. RESIDENT MEDICAL OFFICER (B2) (Male or Female).—Applications are invited from registered medical practitioners, male or female, for the above post, which is now vacant, including R and W practitioners now holding A posts. If held by R and W practitioners the appointment will be limited to six months, otherwise it will be for a period of twelve months. The duties attached to the post of Resident Medical Officer are mainly medical, and preference will be given to candidates who have had previous postgraduate medical experience in either a municipal or voluntary hospital. The salary is £200 per annum, plus bonus, with full residential emoluments. Applications from alien medical practitioners will be considered. Applications must be on forms to be obtained from Dr. D. Morley Mathieson, Medical Officer of Health, 9, Hamilton Square, Birkenhead, to whom they should be returned as soon as possible after completion.—E. W. Tame, Town Clerk, Town Hall, Birkenhead.

COUNTY BOROUGH OF PRESTON. Sharoe Green Hospital (250 beds): ASSISTANT MEDICAL OFFICER (B1) (Resident or Non-resident).—Applications are invited from fully qualified and registered practitioners for the above appointment. Salary at the rate of £350, rising by annual increments of £25 to £450 per annum, plus war bonus, with full board and residence, valued at £100. Previous experience in midwifery is essential, the duties consisting mainly of obstetrical work (35 maternity beds). Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R and W practitioners now holding B1 posts can not be considered unless they have been rejected by the R.A.M.C. Applications should be sent to the Medical Superintendent, Sharoe Green Hospital, Fulwood, Preston. The successful candidate will be required to contribute to the Council's superannuation scheme.—H. E. Nutter, Town Clerk.

BRITISH MEDICAL ASSOCIATION. SCOTTISH SECRETARY.—The Council of the British Medical Association invites applications from registered medical practitioners, including those serving with H.M. Forces, for the post of Scottish Secretary. The salary will be at the rate of £1,250 a year, rising by annual increments of £50 to £1,750 a year, plus cost-of-living bonus. The Association's superannuation scheme for officials will apply to the post. The successful candidate, who will be expected to take up office on January 1, 1946, or on demobilization, will spend three months at the Association's London Headquarters and three months at the Scottish Office in Edinburgh under the present Scottish Secretary before taking up the full duties of the office in Edinburgh. There is no form of application, and applications, with full particulars of qualification, experience, age, etc., should be sent to the Secretary of the British Medical Association, Tavistock Square, London, W.C.1, arriving not later than November 1, 1945.—Charles Hill, Secretary.

COUNTY COUNCIL OF THE COUNTY OF RENFREW. ASSISTANT MEDICAL OFFICER OF HEALTH.—Applications are invited from qualified medical practitioners for the above appointment. The salary will be at the rate of £500-£700 per annum, by annual increments of £25, together with war bonus at J.I.C. rates (£60 at present). The person appointed will be required to carry out school medical duties and maternity and child welfare duties in the Port of Glasgow and Gourock areas. The post is normally a permanent one, but in accordance with the desire of the Department of Health for Scotland, the appointment will be, in the first place, of a temporary nature. The person appointed will be eligible to apply for the permanent post at a later date. The successful applicant will require to pass a medical examination and to contribute to the County Council's Superannuation Scheme. Suitably qualified R or W practitioners are invited to apply, but they must have obtained the sanction of the Secretary of State and the Scottish Central Medical War Committee to their application. Applications, stating age, which must not exceed 45 years, should be sent to the County Medical Officer, 16, Back Sneddon, Street, Paisley, on or before July 21, 1945.—Canvassing, direct or indirect, will be a disqualification.—Robert Urquhart, County Clerk, County Buildings, Paisley.

COUNTY BOROUGH OF READING. Battle Hospital. (E.M.S., 130 beds; Municipal General, 453 beds). RESIDENT SURGICAL OFFICER (temporary).—Applications are invited from registered medical practitioners for the temporary appointment of Resident Surgical Officer (B1), shortly becoming vacant at the above hospital. Applicants should have held house appointments and had surgical experience. Preference will be given to candidates holding the Diploma of F.R.C.S. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R and W practitioners now holding B1 appointments cannot normally be considered unless the applicants have been rejected by the R.A.M.C. Salary is at the rate of £550 per annum, plus war bonus, plus residential emoluments valued at £100 per annum. The appointment is tenable for one year in the first instance. Forms of application, which may be obtained from the undersigned, should be completed and returned to the Town Clerk, accompanied by copies of three recent testimonials and endorsed "Resident Surgical Officer, Battle Hospital," not later than Monday, July 30.—G. F. Darlow, Town Clerk, Town Hall, Reading.

COUNTY BOROUGH OF PRESTON. Sharoe Green Hospital (250 beds).—Applications are invited from registered medical practitioners, female, for the appointment of JUNIOR RESIDENT MEDICAL OFFICER (A), including W practitioners within three months of qualification. If held by a W practitioner appointment will be for a period of six months, otherwise it will not exceed one year. Salary is at the rate of £200 per annum, with full residential emoluments. Applications should be forwarded to the Medical Superintendent, Sharoe Green Hospital, Fulwood, Preston.

CITY OF LIVERPOOL. Cleaver Sanatorium for Adults, Heswall, Cheshire. RESIDENT ASSISTANT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male and female, for the above appointment, including R and W practitioners who now hold A posts. If held by an R or a W practitioner the appointment will be limited to six months, otherwise it will be for a period of twelve months. The salary is at the rate of £350 per annum, together with cost-of-living bonus and full residential allowances. All fees received in connexion with the appointment to be handed over to the City Council. Applications, stating whether R practitioners, should be endorsed "Resident Medical Officer" and sent to the undersigned forthwith.—W. H. Baines, Town Clerk, Municipal Buildings, Dale Street, Liverpool, 2.

COUNTY BOROUGH OF SOUTHEND-ON-SEA. Southend Municipal Hospital, Rochford, Essex. RESIDENT HOUSE MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for the appointment of Resident House Medical Officer (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be tenable for a period of six months, otherwise for a period of one year. Salary is at the rate of £200 per annum, with full residential emoluments, valued at £100 per annum, plus cost-of-living bonus. The person appointed will be liable to pay superannuation contributions if the provisions of the Local Government Officers' Superannuation Acts are applicable. The post is now vacant, and applications should be addressed immediately to the Medical Superintendent, Southend Municipal Hospital, Rochford, Essex—H. J. Worwood, Town Clerk, Town Clerk's Office, Southend-on-Sea.

COUNTY BOROUGH OF HALIFAX. The Halifax General Hospital (450 beds).—Applications are invited for the position of MEDICAL OFFICER (B1), male or female. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R and W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary £450 by £25 to £525, plus £150 if non-resident, with war bonus at present approximately £60 per annum. There are six full-time medical officers, and this is a senior medical appointment. Applications to be addressed to the Medical Superintendent.

COUNTY BOROUGH OF NEWPORT. Social Welfare Committee.—Applications are invited from registered medical practitioners, male or female, for the temporary appointment of JUNIOR RESIDENT MEDICAL OFFICER (A), at the Wooloston House Emergency Hospital, Newport, Mon. Salary £150 per annum, with full residential emoluments. All fees, with the exception of coroners' fees are payable to the Social Welfare Committee. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months, otherwise twelve months. Applications should be sent at once to Tom Kay, Director of Social Welfare, Town Hall, Newport, Mon.

CITY OF BIRMINGHAM. Little Bromwich Infectious Disease Hospital. JUNIOR MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for appointment as Junior Medical Officer (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts the appointment will be for a period of six months, otherwise it will be for twelve months. The salary will be at the rate of £300 per annum, plus residential emoluments. Applications should be addressed to the Medical Officer of Health, Public Health Department, Birmingham, 3, to reach him not later than July 24, 1945.

CITY OF BIRMINGHAM, Romsley Hill Sanatorium (120 beds).—Applications are invited from registered medical practitioners for the post of RESIDENT ASSISTANT MEDICAL OFFICER (B1), male or female. Candidates must have held a resident hospital appointment since qualifying and experience in the diagnosis and treatment of tuberculosis will be a recommendation. The salary is at the rate of £350 per annum, plus residential emoluments, and the appointment is subject to one month's notice on either side. Suitably qualified R and W practitioners holding B2 appointments, also R practitioners holding B1 and rejected by the R.A.M.C., may apply. Applications should be addressed to the Medical Officer of Health, Public Health Department, Congreve Street, Birmingham, 3, not later than July 27, 1945.

CITY OF CHESTER, City Hospital. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners for the appointment of Resident Medical Officer (B2) at the above hospital. Salary at the rate of £200 per annum, with full residential emoluments and temporary war bonus. R and W practitioners holding A posts may also apply when appointment will be limited to six months, otherwise will not exceed one year. The appointment will be vacant on September 1, 1945.

JUNIOR RESIDENT MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners for the appointment of Junior Resident Medical Officer (A) at the above hospital. Salary at the rate of £200 per annum, with full residential emoluments and temporary war bonus. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise not exceeding one year.

Applications for the above appointments should be sent to the Medical Officer of Health, Town Hall, Chester.

IMPORTANT — All applicants should read the notice about qualifications required, etc., printed at the top of page 9

ADMINISTRATIVE COUNTY OF ESSEX. TEMPORARY ASSISTANT MEDICAL OFFICER FOR OPHTHALMIC WORK.—The County Council invite applications for the above whole-time temporary appointment from registered medical practitioners with special experience in all branches of ophthalmology and preferably holding the Diploma in Ophthalmic Medicine. Remuneration at the rate of £700 a year, rising, subject to satisfactory service, by annual increments of £25 to £800 a year, together with such war bonus as may be decided by the Council from time to time, will be paid for this appointment, in respect of which first-class railway fares will be reimbursed or a motor-car allowance, based on the County scale, will be granted. Candidates already in whole-time public health employment by Local Authorities are not eligible for appointment. Applications (on the prescribed form obtainable from the undersigned), accompanied by copies of not more than three recent testimonials, which will not be returned, should be addressed to me and delivered at the County Hall, Chelmsford, not later than July 28, 1945. Full information should also be given as to the applicant's position in relation to military service. Canvassing, directly or indirectly, is forbidden. This advertisement is published with the approval of the Minister of Health.—John E. Lightburn, Clerk of the County Council, County Hall, Chelmsford.

CITY OF MANCHESTER. Booth Hall General Hospital for Children (760 beds). TEMPORARY DEPUTY MEDICAL SUPERINTENDENT AND RESIDENT MEDICAL OFFICER (B1).—The Public Health Committee invites applications from registered medical practitioners, male or female, for the above-mentioned appointment, which will become vacant on the recruitment into H.M. Forces of the present holder in the near future. Candidates should have wide postgraduate experience in paediatrics and, preferably, hold a higher medical qualification. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners holding B1 appointments cannot be considered unless they have been rejected by the R.A M.C. Basic salary £610 per annum, but further increments of £30 per annum to a maximum of £700 may be granted at the discretion of the Council. Full residential emoluments are additional to the salary stated. A temporary cost-of-living wages addition is also payable, and the present commencing annual cash remuneration is £640 in the case of a male officer and £634 2s. 6d. in the case of a female officer. Full information and forms of application may be obtained from the Medical Officer of Health, Hospitals Administration Section, G.P.O. Box 399, Town Hall, Manchester, 2. Applications for the post must be forwarded to me only, and not to members of the Committee or the Council, not later than July 28, 1945. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk Town Hall, Manchester, 2.

CITY OF PORTSMOUTH Education Committee (School Medical Service).—Applications are invited from medical practitioners of recognized consultant and specialist status, for the undermentioned part-time appointments in the School Medical Department, for which the salaries payable will be at the rate of £2 12s. 6d. per session.

(a) OPHTHALMIC SURGEON. The successful applicant will be required to conduct regular sessions, approximately once weekly during term time at the Central School Clinic, for the examination and treatment of children suffering from diseases of the eye and defective vision, and to inaugurate and supervise a scheme of orthoptic treatment.

(b) CARDIOLOGIST. The successful applicant will be required to conduct regular sessions, probably fortnightly, at the Central School Clinic, for the examination and treatment of children suffering from heart disease, rheumatism and allied diseases.

These appointments will be for an initial period ending March 31, 1947, and thereafter renewable annually.

Application forms, together with further details and conditions of service, may be obtained from and must be returned to, the Chief Education Officer, 1, Western Parade, Southsea, not later than July 27, 1945.—Frederick Sparks, Town Clerk and Clerk to the Education Committee, Municipal Offices, 1, Western Parade, Southsea

---

COUNTY OF LINCOLN—PARTS OF LINDSEY. Public Health Department. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH FOR MATERNITY AND CHILD WELFARE (Female). —Applications are invited from fully qualified medical women for the post of Assistant Medical Officer for Maternity and Child Welfare. Before applying, intending applicants already in whole-time employment with local authorities must obtain the permission of their (Principal) Regional Medical Officer. Salary will be £650, rising by two annual increments of £25 to £700 per annum, plus war bonus. The appointment will be terminable upon one month's notice from either side. The person appointed will be required to provide her own car for which a travelling allowance will be paid in accordance with the County Council's Scale. Further particulars of the appointment and forms of application may be obtained from the undersigned, to whom applications together with copies of three recent testimonials should be forwarded to reach him not later than July 28 1945.—W. S. H. Campbell, County Medical Officer of Health, County Offices, Lincoln

---

CORPORATION OF GLASGOW. MEDICAL OFFICER OF HEALTH.—Applications are invited for the post of Medical Officer of Health for the City of Glasgow from qualified medical practitioners who are registered in the Medical Register as holders of a Diploma in Sanitary Science, Public Health or State Medicine. The Medical Officer of Health is also Port Medical Officer for the Port of Glasgow. The duties comprise the adminisration of all the statutory health and sanitary services of the Corporation. The post is due to fall vacant at the end of March, 1946, and the new Medical Officer of Health will be expected to take up duty at the beginning of April, 1946, or as soon thereafter as possible. Salary at the rate of £1,500 per annum rising by annual increments of £50 to £2,000 per annum, plus war increase, and with £50 per annum additional for Port duties. The appointment is subject to the provisions of the Corporation's Superannuation Scheme and the successful candidate will be required to pass a medical examination. In orde. to allow time for candidates now abroad or in H.M Forces to apply, the last date for receipt of applications has been fixed at October 1, 1945. Applications should be accompanied by copies of not more than three testimonials or the names of referees.—William Kerr, Town Clerk, City Chambers, Glasgow.

CITY OF LEEDS. Public Health Department. St. James's Hospital. HOUSE SURGEON (B2).—Applications are invited from registered medical practitioners for the post of House Surgeon (B2) for the Plastic and Maxillo-facial Unit at the above Municipal Hospital, including R and W practitioners who now hold A posts. If held by an R or a W practitioner, the appointment will be limited to six months, otherwise it will be for a period of twelve months. The salary is at the rate of £200 per annum, plus a cost-of-living bonus, together with full residential emoluments. Applications endorsed "House Surgeon" to be forwarded to the undersigned.—J. Johnstone Jervis, Medical Officer of Health, Public Health Department (Hospitals Administration Section), 12, Market Buildings, Vicar Lane, Leeds, 1

EAST RIDING COUNTY COUNCIL. Driffield Emergency Hospital.—Applications are invited from registered medical practitioners, male and female, for the appointment of MEDICAL OFFICER (B2) (Surgical duties), vacant immediately, including R and W practitioners who now hold A posts. If held by an R or a W practitioner the appointment will be limited to six months, otherwise it will be for a period not exceeding one year subject to one month's notice on either side. The salary is at the rate of £200 per annum, with full residential emoluments. Applications to be made as soon as possible to the undersigned.—T. Stephenson, Clerk of the Council, County Hall, Beverley.

KENT COUNTY COUNCIL. County Hospital, Dartford (344 beds). TEMPORARY RESIDENT MEDICAL OFFICER (A).—Applications are invited from suitably registered medical practitioners of either sex for the above appointment. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. The salary is £200 a year, plus a temporary war addition of £29 19s. 7d., with full residential emoluments. Superannuation can be arranged and the successful candidate will be required to pass a medical examination. Applications should be addressed to the County Medical Officer, County Hall, Maidstone, so as to reach him by July 24, 1945.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

KENT COUNTY COUNCIL. County Hospital, Farnborough (1,000 beds).—TEMPORARY RESIDENT MEDICAL OFFICER (A).—Applications are invited from suitably registered medical practitioners of either sex for the above appointment. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. The salary is £200 a year, plus a temporary war addition of £29 19s. 7d., with full residential emoluments. Superannuation can be arranged and the successful candidate will be required to pass a medical examination. Applications should be addressed to the County Medical Officer, County Hall, Maidstone, so as to reach him by July 24, 1945.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

NORFOLK COUNTY COUNCIL. Attleborough Emergency Hospital. TEMPORARY RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered medical practitioners of either sex. Salary £500, rising by £25 to £550 per annum, together with board, residence, and laundry valued at £100 per annum. Preference will be given to applicants reading for the Fellowship. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R and W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The practitioner appointed may also be required to do work outside the hospital. Applications should be addressed to the County Medical Officer, 29, Thorpe Road, Norwich, Norfolk.

DERBYSHIRE COUNTY COUNCIL. Bretby Hall Orthopaedic Hospital (147 beds).—Applications are invited from registered medical practitioners, male and female, including R and W practitioners who now hold A posts, for the appointment of TEMPORARY JUNIOR RESIDENT ASSISTANT MEDICAL OFFICER (B2). If held by an R or W practitioner the appointment will be limited to six months, otherwise it may be extended for a longer period. The salary is at the rate of £300 per annum and war bonus, together with full residential emoluments. The successful candidate will be required to devote the whole of his time to the duties of the office. The appointment will be subject to the provisions of the Local Government Superannuation Act, 1937, and the person appointed will be required to pass a medical examination. Application forms may be obtained from the Acting County Medical Officer, County Offices, St. Mary's Gate, Derby, to whom they must be returned, together with copies of not more than three recent testimonials, on or before July 28, 1945.

KINGSTON-UPON-HULL CORPORATION HEALTH DEPARTMENT. Kingston-upon-Hull City Hospitals and Sanatorium.—Applications are invited for the appointment of a TEMPORARY RESIDENT MEDICAL OFFICER (B1) at the above hospital. The appointment is open to registered medical practitioners of either sex, who must be single and have had experience in general hospital work. Possession of the Diploma of Public Health or similar qualification, and previous experience in a fever hospital or sanatorium will be regarded as additional qualifications. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R and W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The appointment is for a period of one year and the salary is £350 per annum, together with board, laundry, and residence. The appointmen may be extended for more than one year, in which case the salary, subject to satisfactory service, will be increased by annual increments of £25 to a maximum of £450 per annum, plus increased cost-of-living bonus. Application forms may be obtained from, and should be returned to, the Medical Officer of Health, Guildhall, Kingston-upon-Hull, as early as possible.

LANCASHIRE COUNTY COUNCIL. Wrightington Hospital, near, Wigan.—Applications are invited for JUNIOR MEDICAL OFFICER (B2) at the Wrightington Hospital, containing 370 beds (280 beds for non-pulmonary tuberculosis (adults and children), 20 beds for "combined" pulmonary and non-pulmonary cases and 70 beds for pulmonary cases). The medical staff consists of medical superintendent, three assistants, two consultant orthopaedic surgeons, other visiting surgeons and visiting physician. Excellent facilities for reading for M.D. Salary £300 per annum, plus bonus, together with board, single quarters, and laundry valued at £146. R and W practitioners who now hold A posts may apply, when appointment will be limited to six months, otherwise one year. Forms of application and conditions of appointment from Central Tuberculosis Officer, County Offices, Preston. Mark letters "Wrightington M.O."

LONDON COUNTY COUNCIL. Mental Health Services.—Applications are invited for positions of TEMPORARY ASSISTANT MEDICAL OFFICER (B1). Weekly salary, £7 7s. a week, rising to £8 8s. a week after twelve months' service, with residential emoluments (£9 11s., rising to £10 12s. if non-resident), plus in each case temporary cost-of-living addition. Additional allowances for possession of D.P.M. and for acting in higher capacity. Suitably qualified R and W practitioners holding B2 appointments, also R and W holders of B1 posts rejected by the R.A M.C. may apply. Application forms obtainable from Medical Officer of Health, Mental Health Services (B), West Park Hospital, Epsom, Surrey.

SALOP COUNTY COUNCIL HOSPITAL, Cross Houses, near Shrewsbury.—Applications are invited from registered medical practitioners for the appointment of a RESIDENT MEDICAL OFFICER (A), including practitioners within three months of qualification who are liable to service under the National Service Acts (women applicants preferred). If held by a practitioner who is liable under these Acts, appointment will be for a period of six months, otherwise it will be for a period, in the first instance, of one year. Salary is in accordance with the scale recommended in the Askwith Report for Whole-time Public Health Medical Officers (£350, by annual increments of £25 to £450). Forms of application can be obtained from the County Medical Officer, College Hill, Shrewsbury, to whom they should be returned, accompanied by copies of three recent testimonials, as soon as possible.—G. C. Godber, Clerk of the Council, Shirehall, Shrewsbury.

SALISBURY GENERAL INFIRMARY. Voluntary Hospital (225 beds)—Applications are invited from registered medical practitioners for the appointment of a HOUSE SURGEON (A). Salary at the rate of £150 per annum, with full residential emoluments, Practitioners within three months of qualification and liable under the National Service Acts may also apply, when appointment will be for a period of six months. Applications should be sent to John Williams, Superintendent and Secretary.

IMPORTANT — All applicants should read the notice about qualifications required, étc., printed at the top of page 9

MIDDLESEX COUNTY COUNCIL. DISTRICT MEDICAL OFFICER AND PUBLIC VACCINATOR.—TWO DISTRICT MEDICAL OFFICERS, one for Ealing East Central Medical Relief District, and one for Ealing West Central Medical Relief District. Salary £200 per annum (with, as war-time measure only, payment equivalent to 20% of salary for additional practice expenses) plus cost of expensive drugs, confinement fees, services of medical practitioner to administer anaesthetics for minor operations. Duties in accordance with Public Assistance Order, 1930, of Minister of Health, reside in or alternatively provide surgery in district and in case of absence arrange for services of qualified medical practitioner.

TWO PUBLIC VACCINATORS, one for Ealing East Central Vaccination District, and one for Ealing West Central Vaccination District. Must possess certificate of proficiency in vaccination. Required to enter into a contract with Council in accordance with Vaccination Order, 1930, of Minister of Health. Contract will provide for payment of scale of fees laid down by County Council.

Boundaries of respective medical relief and vaccination districts identical and desirable that appointment of District Medical Officer and Public Vaccinator be held concurrently by the same individual. Medical practitioners should state if they are prepared to accept both appointments. Unestablished, non-pensionable.

Applications to the undersigned by July 28, 1945.—C. W. Radcliffe, "Z," Clerk of the County Council. Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL.—CASUALTY OFFICER (B2) (Resident) required at CENTRAL MIDDLESEX COUNTY HOSPITAL, Park Royal, N.W.10. Applications invited from registered medical practitioners who have held house appointments and had good all-round experience (including R and W practitioners now holding A posts). Salary £350 per annum, plus war bonus. Board, lodging, and laundry. Whole-time duties such as Council may direct under supervision of the Medical Director. Appointment, subject to medical examination and one month's notice is for six months, but may be extended for another six months. Application to Medical Director "Z" of hospital. Application forms not provided. Closing date July 31, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

SURREY COUNTY COUNCIL. Epsom County Hospital, Dorking Road, Epsom (450 beds).—Applications are invited from registered medical practitioners for the appointment of ASSISTANT MEDICAL OFFICER (B1). Applicants must have held a house appointment and should preferably have had postgraduate experience in the administration of anaesthetics. Applications from R and W practitioners cannot be considered unless they have been rejected by the R.A.M.C. Commencing salary according to experience on the grade £350 by £25 to £450 per annum, plus residential emoluments valued at £125 per annum. The appointment is temporary, and is subject to one month's notice on either side, and any Local Government Superannuation rights will be preserved. Apply to the Medical Superintendent by July [illegible], 1945.

EXPERIENCED RECEPTIONIST-BOOKKEEPER-DISPENSER or Housekeeper (widow) desires POST, coast or near, has own furniture if accommodation available.—Apply Box 9951, B.M.J.

GENTLEMAN requires LADY HOUSEKEEPER, under 50, all duties, help with rough.—Box 9953, B.M.J.

LONDON COLLEGE OF PHARMACY for Women supplies Dispenser-Bookkeeper or Laboratory Technician. Training for Apothecaries Hall Assistants' Examination, and in Clinical Pathology. —Secretary, 7, Westbourne Park Road, W.2 (BAYswater 0969).

LOCUM DISPENSER REQUIRED for three weeks during summer Nottinghamshire, salary 5 gns. per week and travelling expenses.—Box 9175, B.M.J

LOCUM DISPENSER REQUIRED for 2½ weeks, from July 27, 5 gns. p.w., all found.—Apply Dr. Winckworth, Sussex Lodge, Taunton, Somerset.

LADY (MIDDLE-AGED), tactful and sympathetic, seeks post as RECEPTIONIST-BOOKKEEPER, Folkestone or neighbourhood preferred.—Box 9954, B.M.J.

LADY DESIRES SECRETARIAL POST in London, reasonable hours, efficient shorthand typist, considerable experience medical work Edinburgh and London.—Box 9960, B.M.J.

SECRETARY, EXPERIENCED, requires post, 5½ years E.N.T. surgeon, previous hospital experience. —Box 9894, B.M.J.

SECRETARY-RECEPTIONIST.—Excellent reference 2½ years' consultants, seeks post, preferably busy general practitioner, domesticated, drive car, free August.—Box 9978, B.M.J

SECRETARY-RECEPTIONIST, free September from war-time job (5 years), seeks post with doctor in London area, young educated gentlewoman, expert driver, typing and bookkeeping (no shorthand).—Box 9952, B.M.J.

S.R.N., S.C.M., age 38, requires post NURSE-RECEPTIONIST, West End, 10 years' private nursing experience, free end August.—Box 9979, B.M.J

YOUNG LADY REQUIRES POSITION as doctor's RECEPTIONIST, excellent references.—Box 9955, B.M.J.

MISCELLANEOUS

ALPINE SUN LAMP (HANOVIA), model S500, in perfect condition, price £50.—Box 9901, B.M J.

EDISWAN SHOCK THERAPY APPARATUS FOR SALE, as new, very little used, £45 or near offer.—Apply J Plowman, 2, Devonshire Place, W.1.

FOR SALE, CONTENTS of small Pathology LABORATORY, furniture, glassware, centrifuge, electric incubator, waterbath, etc., Zeiss microscope with full equipment, £150 the lot, offers for separate items considered; Hanovia U.V.L. lamp, £15 —Phone Dr. Keys, Guildford 61377.

HANDSOME SOLID MAHOGANY BOOKCASE with carved cabriole legs, upper part fitted movable shelves enclosed by glass panel doors, 3 drawers and 3 cupboards under, 6 ft. wide by 8 ft high, in splendid order, £50 for immediate sale, or near offer; also 4 ft. wide solid mahogany PEDESTAL DESK with leather top and well-fitting drawers, £25.—Can be viewed by appointment at 1007, High Road, Whetstone, N.20. Tel.: Hillside 2384

LEITZ MICROSCOPE, bought 1938, little used fine condition, 1/3, 1/6, and 1/12 oil immersion lens, mechanical stage, mahogany case, offers over £80 — Box 9959, B.M.J.

LEITZ MICROSCOPE (3 eyepieces, 3 objectives, oil immersion, condenser, moving stage); 300 excellent PATHOLOGY SLIDES (Watson); price £70 or best offer, lot or separate.—Box 9958, B.M.J.

MICROSCOPE FOR SALE (Prior), 3 objectives including 1/12 oil immersion, 2 eyepieces, moving stage, practically new, offers over £35 —J Inglis The Colony, Larbert.

WRITING TABLE, 4 ft. 6 in., mahogany, Chippendale design, 9 drawers and leather top, made by Maple, £5; MEDICAL CABINET, wheeled, 17 in., cream enamelled, ground glass shelves, drawer, and cupboard, £5.—Box 9891, B.M.J.

WANTED, SECOND-HAND SURGICAL INSTRUMENTS, furniture for surgery and consulting room, blood pressure apparatus, electric diagnostic sets, ophthalmoscopes, auriscopes, microscopes, etc: —Particulars to A. Fleming & Co (Succrs.), 51, Mortimer Street, London, W.1 Telephone: Mus 6292).

WANTED TO PURCHASE.—Cameras, enlargers, and all photographic apparatus, exposure meters, tripods, etc, microscopes, cine cameras, and projectors. Prompt cash and high prices offered — Wallace Heaton, Ltd., 127, New Bond Street, London, W.1

COMPRI-VENA (1937), Ltd —The care and after-care of Varicose Veins.—In the treatment of Varicose Veins where leg support is prescribed Compri-Vena gives meticulous attention to instructions They will gladly supply particulars of Surgical Stockings and the service they provide —38, South Molton Street, W.1. MAYfair 0732.

DOCTORS' WATCHES.—Franklands can still supply Gold Watches. Write for particulars.— E. J. Frankland & Co., Ltd., Marle House, South Godstone, Surrey; or London Showroom, New Bridge Street House, 30-34, New Bridge Street, Ludgate Circus, E.C.4.

MEDICAL PHOTOGRAPHS and drawings for illustration records, etc.—Write for particulars Eric O. Sonntag, 159, Bickenhall Mansions Baker Street, London, W.1. WELbeck 6860

STRAWSON'S OPEN-AIR REVOLVING SHELTERS (against doctor's certificate) for tubercular and other medical cases. Stamp for List B.M.J 45. —G. F. Strawson & Son, Horley, Surrey

WIGMORE'S, LTD., 63, Baker St., London, W.1. (Welbeck 5668). DISPENSING OPTICIANS by appointment to Western Ophthalmic Hospital, Marylebone Road, London, N.W.1. Doctors' prescriptions accurately dispensed.

HOUSES, CONSULTING ROOMS

WANTED, CONSULTING ROOM, Harley Street, part-time or whole-time, usual service, by throat specialist.—Box 9957, B.M.J.

CLIFFORD, near BOSTON SPA, Yorks.—A most desirable small modern detached COUNTRY RESIDENCE, at present occupied by medical man, with grounds about ½ acre, no charge for goodwill, view only by appointment, freehold price to include nucleus and introduction.—Apply Jackson Stops and Staff, 15, Bond Street, Leeds.

WIMPOLE STREET, CONSULTING ROOM vacant three days a week, furnished, heat, light, and receptionist.—Box 9956, B.M.J.

NURSING HOMES

NURSING HOME OR SOCIETY, Baker Street (off), former nursing home, 33 rooms 4 bath, passenger lift, central heat, lease about 18 years at £180, price £6,500.—Apply G Head & Co., 40 Baker Street, W.1. WEL. 1318

HOMES

BETHLEM ROYAL HOSPITAL
FOR NERVOUS AND MENTAL DISORDERS
MONKS ORCHARD, MONKS ORCHARD ROAD
EDEN PARK, BECKENHAM, KENT

Reg. Tel. Address: Bethlem, Beckenham
Station: Eden Park (Southern Railway)
Telephone: Springpark 1180–1181.

President: HER MAJESTY QUEEN MARY. *Vice-President:* SIR GEORGE WILKINSON, Bart., Alderman. *Joint Treasurers:* Edmund Stone, Esq., John L. Worsfold, Esq., O.B.E. *Physician-Superintendent:* J. G. Hamilton, Esq., M.D., D.P.M.

This REGISTERED Hospital is situated at Monks Orchard in some 250 acres of park, pleasure and farm grounds. Applications can be considered on behalf of patients of the educated classes in a presumably curable condition.

With a view to early treatment voluntary or uncertified patients are admitted. Patients who can contribute 5 guineas weekly towards the cost of treatment and maintenance may be received as vacancies arise. The Committee will also consider applications for admission at lower rates and in certain cases will be prepared to admit patients free of charge. The comfort of sensitive patients is greatly enhanced by the fact that the majority are given single bedrooms. TREATMENT ON MODERN PRINCIPLES. Every facility for specialized investigation and treatment is provided in the Lord Wakefield of Hythe Science and Treatment Unit, including RADIOLOGICAL and DENTAL DEPARTMENTS, BIOCHEMICAL PATHOLOGICAL, and PSYCHOLOGICAL LABORATORIES. The Medical Staff have access to a panel of Consultants in cases which present unusual symptoms requiring specialized investigation and treatment. Under the direction of qualified officers, HELIOTHERAPY, HYDROTHERAPY, and ELECTROTHERAPY are administered in the Physiotherapy Department. SPECIALIZED TREATMENT of various forms is given to suitable cases.

OCCUPATIONAL THERAPY in the form of various Arts and Crafts is actively encouraged from the medical aspect, and under the guidance of a competent instructress this department has proved most effective as a therapeutic factor in all stages of mental illness. The promotion of physical fitness is a prominent item of treatment, and this is enhanced by arrangements for patients to take part in Outdoor and Indoor Sports and Entertainments. Application should be made to the Physician-Superintendent.

PENDYFFRYN HALL SANATORIUM
All Modern Methods of Treatment available

Ideally situated for the treatment of Tuberculosis. Shelter from E. and N.E. winds. Climate mild and bracing. Low rainfall high average of sunshine. The Sanatorium is situated in its own Park. There are miles of graduated walks through pines, gorse, and heather, rising to 800 ft. and commanding extensive sea and mountain views. Central heating, electric light, X-ray installation. Wireless in all rooms. Full day and night nursing staff. Special milk supply from a tuberculin tested herd. Easily accessible from London, Manchester Liverpool, Birmingham, and the North.

Medical Superintendent: DENNISON PICKERING M.D. Apply Secretary, Pendyffryn Hall, near Penmaenmawr, North Wales. 'Phone 20.

NORTHUMBERLAND HOUSE
GREEN LANES, FINSBURY PARK, N.4

A PRIVATE HOSPITAL for MENTAL and NERVOUS ILLNESSES Six acres of ground, facing Finsbury Park. Voluntary and Temporary Patients received without certification. E.C.T. Shock Therapy, Psychotherapy, etc. Telephone: Stamford Hill 2688. Telegrams: "Subsidiary, London." Particulars from the Medical Superintendent, Robert M. Riggall Member British Psycho-Analytical Society.

ROYAL EARLSWOOD INSTITUTION

Redhill, Surrey, for MENTAL DEFECTIVES of all ages. Training under medical supervision. Schools. Farm. Trade: Workshops. Recreation. Fee £125 to £375 p.a. Election by votes of subscribers at reduced terms for necessitous trainable cases Apply SECRETARY. Tel.: Redhill 344.

TYKEFORD ABBEY, NEWPORT PAGNELL, Bucks.

A Nursing Home for Nervous Disorders, Medical Fees from £5 5s.—Dr. D. E. M. Douglas-Morris Telephone 121.

Published by the Proprietors, the British Medical Association, Tavistock Square, London, W.C.1, and printed by Fisher, Knight & Co., Ltd., The Gainsborough Press, St. Albans. Printed in Great Britain. Entered as Second Class at New York, U.S.A., Post Office.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY JULY 21 1945

RELEASE OF DOCTORS

Statement by the Secretary of the B.M.A. and the Central Medical War Committee

The Central Medical War Committee and the British Medical Association are fully aware of the dissatisfaction felt by Service medical practitioners at the lack of information on release. It may be useful to set out the facts, so far as they are known.

1. The Central Medical War Committee is an advisory committee, the decisions in regard to demobilization being made by the Government and the Service Departments in particular.

2. The Central Medical War Committee made specific recommendations to the Government on the subject of demobilization of doctors on Aug. 3, 1944. These recommendations were essentially similar to the reallocation scheme eventually announced in the White Paper, including release by age-and-service groups as the basic principle, with provision for release out of turn in exceptional cases on the ground of civil need.

3. Last autumn, when it became known that there was likely to be difficulty in releasing medical officers at the same rate as other members of the Forces, the Committee recommended to the Government that compulsory recruitment of medical practitioners should be continued after the end of the European War up to a limit of age of 35 to 40. The Government have provisionally adopted the age of 35 as the normal age limit, but have permitted recruitment to proceed up to the age of 40 to the extent necessary for replacement of released officers for whom substitutes must be provided.

4. The Committee, with the Government's approval, is continuing recruitment of general duty officers and specialists so as to accelerate release under Class A, to replace those released under Class B, and to ensure that the greatest possible number of practitioners are released on the dates applicable to their groups. This will involve the continuance of the automatic recruitment of young practitioners and the recruitment of older practitioners, including holders of B1 posts and specialists.

5. The Central Medical War Committee will keep Class B releases down to the absolute minimum.

6. Although the Service Departments have announced their immediate programme, involving the release of Groups 1–7 in the Navy, Groups 1–11 in the Army, and Groups 1–6 in the Air Force, no official decisions have been made known about the remaining groups. There is no assurance at present that the medical timetable will be the same as the general timetable. What has been pressed upon the Service authorities is the urgent need for a clear-cut statement of future intentions, for until Service practitioners are informed of the long-term programme their dissatisfaction will remain fully justified.

7. It is not clear why, so far as medical practitioners are concerned, the rates of group release need differ in the three Services. The Committee has sought enlightenment on this point, its aim being to secure the speediest possible release from all the Services.

8. The British Medical Association is making vigorous representations at a high level, requesting an overhaul of Service establishments and strictly economical use of medical personnel and an official pronouncement of future policy, including a timetable of future group releases.

9. The present position is not satisfactory, but Service medical practitioners can rest assured that the Association and the Central Medical War Committee are taking every possible step on their behalf.

10. The following letter has been sent to Local Medical War Committees:

> "The Central Medical War Committee has resolved, and has so informed all Service practitioners, that it will make every effort to secure that Service practitioners are released in their age-and-service groups as their turn comes. To this end it will continue to recruit young practitioners under the existing procedure. The Government have decided provisionally that the compulsory recruitment of men other than young practitioners shall be continued to the extent to which such men are required to replace officers whose release is dependent on substitution; and that the age limit shall be 35 wherever possible, or 40 where suitable substitutes below the age of 35 are not available.
>
> The Central Medical War Committee therefore proposes to recruit practitioners, other than specialists, who were born in 1910 or later, as and when they are recommended by Local Medical War Committees. Local committees will, it is hoped, proceed with the recruitment of such practitioners as and when they can be spared. Every recruitment means an acceleration of release for a practitioner who has served. As the replacement of specialists will be the more difficult problem, the Central Medical War Committee proposes to recruit consultants and specialists who were born in 1905 or later, again on the recommendation of the local committees.
>
> This letter refers specifically to the recruitment of consultants and specialists, full or graded, so as to make possible the release of consultants and specialists under the age and length of service formula. The scheme now to be put into operation by the Central Medical War Committee will work in the following way.
>
> The Service Departments will inform the Central Medical War Committee of the consultants and specialists falling to be released under Class A age and length of service arrangements. The central committee will inform each local committee of the name of every such consultant and specialist in its area. Immediately on receiving this information the local committee is asked to recommend for recruitment a practitioner working in the same branch, either of the same status or a somewhat junior status. For a specialist there should be offered a specialist or a graded specialist who was born on or after Jan. 1, 1905. If a suitable man who was born on or after Jan. 1, 1910, is available, he should be selected in preference to older practitioners. Wherever there are recruitable practitioners of the appropriate age, status, and branch of medicine the recruitment procedure should be initiated. Unless this is done, specialists who have given grand service to their country will not be released in their order.
>
> The Central Medical War Committee asks for the warm co-operation of your committee in this task. The names of the consultants and specialists in your area will be sent to you from time to time, the first lists being dispatched in the next few days. In some instances the recruitment of the holder of a B1 post would be sufficient to meet the situation. The Central Medical War Committee itself is proceeding with the recruitment of practitioners who have held B1 posts for two years or more. There is no reason why Local Medical War Committees should not in appropriate cases offer for recruitment under this substitution procedure the holder of a B1 post who has not yet held it for two years.
>
> The Government have decided to discontinue the compulsory recruitment of women doctors, as of other women, but women may continue to volunteer for the Services."

INSURANCE ACTS COMMITTEE OF THE B.M.A.

DISCUSSIONS WITH THE MINISTRY

A meeting of the Insurance Acts Committee was held on July 3, Dr. E. A. GREGG presiding. The committee paid tribute to the memory of Mr. Bishop Harman, formerly treasurer to the National Insurance Defence Trust. The chairman said that there never was a more devoted member of the Association.

The chairman reported on a number of matters discussed with the representatives of the Ministry of Health. Following previous conversations, the Ministry had suggested an amendment of the certification rules which would permit a practitioner to issue a special intermediate certificate on any day in the appropriate insurance week—a proposal which the committee did not feel went far enough. The Ministry now stated that it was proposed to extend this so as to allow a practitioner to give special intermediate certificates at eight-weekly intervals in cases where no treatment was required and the doctor had been in attendance continuously for six months. Dr. Gregg said that this was some concession, though not all for which the committee had asked.

The Ministry had been informed of representations made that to an increasing extent insured persons' names were being removed from doctors' lists although the insured persons themselves had been in continuous employment, and the Ministry had agreed to take up the matter with the approved societies and see if it was possible to make any improvement. On the question of sickness benefit in relation to pregnancy, it was stated that the Ministry's advice to approved societies, when sought, was that sickness benefit should be paid during the last four to six weeks of pregnancy, and the Ministry was prepared to pursue the same line with any approved society which could be shown to be adopting a less beneficent attitude.

The Ministry agreed that there should be a return at the first opportunity to the pre-war practice of keeping for five years the medical records of insured persons whose title to benefit has lapsed. On another point, while unable to accept a proposal to include the whole of the sulphonamide group of drugs in the list appended to Part II of the Distribution Scheme, the Ministry promised to include in the list four or five of these drugs most commonly in use.

Reference of Patients to Tuberculosis Officer

The committee took strong exception to a circular letter issued by the Ministry to local authorities stating that certain insured persons were referred to divisional medical officers for independent medical examination, and that in some instances, as a result of that examination, it was advisable for the divisional medical officer, where a tuberculous condition was diagnosed or suspected, to refer the case for specialist investigation and report to the tuberculosis officer of the area. The circular added that the Minister felt "sure that authorities would be glad to have any such case brought within the purview of their tuberculosis service in this way." Dr. Gregg said great objection was taken to this. If there was any individual practitioner who was grossly slack something of the kind might apply, but until such a position arose this suggestion that the divisional medical officer should forthwith send the case to the tuberculosis officer, afterwards communicating the findings of that officer to the insurance doctor concerned, was a form of by-passing the latter which they could not tolerate.

The unanimous view of the committee supported the chairman in his protest. It was pointed out that if there was any slackness on the part of an individual doctor this measure would increase the evil, for the slack practitioner would find that he need not do anything about the patient at all and could wash his hands of all responsibility. "We are bound," said one member, "to accept the service of R.M.O.s on the point of incapacity, but we will not accept that service as being of the quality and kind which entitles them to rank as consultants and as men of higher clinical calibre than ourselves." The chairman also reminded the committee that this would not stop short at tuberculosis. It would make of a divisional medical officer a consultant on any condition.

It was agreed that the strongest possible objection should be made to the Ministry of Health concerning both the contents of the circular and the manner of its issue, which had been without reference to the committee; also that the matter should be ventilated at the forthcoming Annual Representative Meeting.

Other Business

It was reported to the committee that the Council had decided to re-establish the Association's Medical Representation in Parliament Fund. At the next meeting of the committee, sitting as Trustees of the National Insurance Defence Trust, the desirability of a contribution from that Trust will be considered.

The committee considered a resolution from the last Annual Representative Meeting calling for a revision of the disciplinary procedure of the National Health Insurance Acts, to embody a central appeal board. The view of the committee was that on the eve of new arrangements it was not advisable to interfere with the present disciplinary procedure, but that the proposal should be borne in mind in considering the disciplinary aspect of the new service.

The Ministry of Health transmitted a request from the War Office that the routine provision of Service medical reports might be dispensed with in a limited class of case—namely, individuals who do not pass through the normal "invaliding" machinery and are employable from the purely medical point of view but are being discharged because no military low-category employment was available. It was explained that such men pass through a bottle-neck, and the preparation of medical reports would throw a considerable additional burden on the medical staff available through the particular channel of discharge. It was agreed that no exception should be taken to the proposal so far as it applied to this limited class and providing it was understood that a practitioner would have no difficulty in obtaining a copy of the record on application in an individual case.

In view of possible renewed negotiations with the Minister of Health, the Council of the Faculty of Homoeopathy feels that it is important to know the exact location of all physicians practising homoeopathy in the United Kingdom. Those not already in touch with the Faculty of Homoeopathy might contact the honorary secretary immediately at the London Homoeopathic Hospital, Queen Square, W.C.1.

HEARD AT HEADQUARTERS

Wartime Appointments

The Hospitals Committee of the B.M.A. had a long discussion the other day on the question of wartime appointments to the consultant and specialist staffs of municipal and voluntary hospitals (much the same principles, of course, apply to public health and university appointments). Now that the war in Europe is over there is a disposition in some quarters to revert to the practice of making senior hospital appointments on a permanent basis. The Association's view, expressed on many occasions, is that common fairness to doctors absent on national service requires that the policy of making only temporary appointments until the war against Japan is over should continue. This principle cannot be said to be annulled because the war in one continent is over so long as large forces, with medical officers to serve them, are employed in another. This view is also held by the Central Medical War Committee and by the Committee of Reference of the Royal Colleges.

It has always been admitted that there may be exceptional circumstances to justify a permanent appointment even in wartime. In these cases it is urged upon hospitals and other appointing authorities that the time limit allowed for the receipt of applications should be such as to enable candidates over-seas to be considered.

After the discussion the Hospitals Committee reiterated the policy which the Association just before the outbreak of war urged upon hospital authorities—namely, that no new appointments to the consultant and specialist staffs of municipal and voluntary hospitals should be made on a permanent basis during the war and for a period of twelve months thereafter, and that where it is necessary to make an appointment it should be temporary and terminable within twelve months of the conclusion of hostilities.

It should be added that hospital authorities have to a large extent adopted this policy, but the difficulty comes with the ending of the war in—for the people of this country—its most important theatre.

Medical Staff Committees

Readers of the *Supplement* will recall the interesting article on May 5 by Dr. J. B. Cook on the medical staff committees in the hospitals of the Middlesex County Council. Following this the Association made inquiries of the London County Council concerning any official action in the establishment of medical staff committees in the largest hospital service directed by a single authority in the world. The Medical Officer of Health, Sir Allen Daley, has replied that he is in full sympathy with the establishment of such committees and has encouraged the medical staffs to set them up whenever he has had the opportunity, but war conditions have rather hindered the movement. The medical staff of London county hospitals may be said to divide itself into two groups. One consists of visiting consultants and specialists—busy people who would find it difficult to make another appointment to attend a staff meeting; the other of whole-time, mostly resident, staff who are in daily touch with one another and with their medical superintendent. When the inevitable post-war changes of methods of staffing have been carried out, it is hoped that London will set an example in this matter as it has done in other respects.

Hospital Facilities for General Practitioners

A committee of the Association—really a subcommittee of the Hospitals Committee—has been discussing the provision of hospital facilities for general practitioners with reference to the latter's needs in both urban and rural areas. A draft report has been prepared, which is down for further discussion at a meeting to be held this week, and perhaps some statement may be made on the matter at the Annual Representative Meeting. The A.R.M., by the look of things, will not have an overburdened agenda. It is only a little over seven months since the last A.R.M. As for the national health service, this must remain in a state of suspended animation until the results of the General Election—to be announced on what will probably be the last day of the meeting—are known.

Payment of Medical Staff

Not a very encouraging result has come from an inquiry which the Association has been making of all the voluntary hospitals in the area of London and the Home Counties. It was desired to learn how far these hospitals had accepted the new scheme of the Hospital Saving Association, recognizing the £420 limit in full, and also to what extent payment of medical staffs had been adopted.

Of the 123 hospitals who replied, 82 stated that they had accepted the revision (2 of them under protest), 28 had not done so, 5 had accepted subject to almoners' inquiries, and 8 had not yet come to a decision. As for payments to a staff fund, only 33 of the hospitals make such payment, at varying percentages or at certain fixed total amounts or a certain amount for each patient, 5 others have recognized the principle without as yet making any payment, and 85 make no payments.

When these figures were placed before the Hospitals Committee the idea of the general salaried payment of medical staffs found a good deal of support. When one objection was made that salaries would take away the voluntary character of the hospital, it was pointed out that when this question in different forms had come forward in the past it had been agreed that payment or non-payment of staff and payment or non-payment by patients had nothing to do with determining the voluntary or other character of a hospital. A hospital is voluntary by reason of its voluntary management and nothing else.

Putting Britain on its Feet

Looking at the new list of chiropodists on the National Register of Medical Auxiliary Services, one feels that there should be no difficulty in putting the country on its feet. There are now over 3,000 registered chiropodists, though it is true that a large number of them are still on active service. Chiropodists seem most abundant in the North; Glasgow has 144 and Edinburgh has 80. Manchester and Birmingham each has over 60. The Chiropody Group Council has issued a memorandum on the relation of chiropody to the health of the community, which recounts the steps that led to the official recognition of chiropodists, the preliminary move having been made by the B.M.A. The Board of Registration of Medical Auxiliaries laid down certain conditions under which chiropodists would be admitted to the National Register. Five organizations—societies of chiropodists—were recognized under those arrangements as having approved standards of curriculum, training, and ethical conduct, and representatives of those five now constitute the Chiropody Group Council.

Correspondence

Voting at Representative Meetings

SIR,—In the *Supplement* of July 14 you publish a letter from Lieut.-Col. J. A. Balck-Foote which in effect consists of two complaints. The first is that the recent Special Representative Meeting allowed itself to be persuaded by the Chairman of Council (Dr. Dain) to do things which, it seemed to me, it wanted done. This is a matter for the individual Representatives. Decisions are taken by the votes of the majority, and each and every Representative had full opportunity for influencing the Representative Body before any decision was taken. I have not hitherto noticed that they can be led contrary to their convictions.

The second complaint is that the Chairman of Council intervened to an excessive extent in the debates at that meeting. At an ordinary Representative Meeting each and every chairman of a Standing Committee, and often of other committees, acts for the Council on the subject-matter of his own committee. At this Special Representative Meeting the sole subject-matter was the report of the Negotiating Committee, of which the Chairman of Council was the chairman, and it was entirely necessary that he should voice the views of the Council on almost every matter discussed at the meeting. No one else could, and he did so without rhetoric but with a clarity of expression and a simplicity of language which to me were oratory at its best. That he did so intervene to the satisfaction of the Representative Body was evidenced by the enthusiastic tribute paid to him at the conclusion of the meeting.

At the previous Representative Meeting I myself invited the meeting to express its satisfaction with the Chairman of Council. On this occasion the proposal did not come from what I may term the platform, it came from the body of the hall, and it was met with an enthusiasm which, within my knowledge of Representative Meetings, was unprecedented.—I am, etc.,

PETER MACDONALD,
Chairman, Representative Body.

York.

SIR,—Except for the first two sentences, the second of which is confused by a misprint, we, the undersigned, thoroughly endorse the accurate description of the proceedings of the last two Annual Representative Meetings that appeared in the *Supplement* of July 14 (p. 7) over the name of J. A. Balck-Foote. We do, however, feel very sorry that such a fine representative should have declined renomination, because the presence of such men as he is essential if the state of affairs to which he refers is to be rectified.—We are, etc.,

A. LAWRENCE ABEL.
R. COVE SMITH.
A. DICKSON WRIGHT.
HORDER.
R. HALE-WHITE.
E. T. WRIGHT.

London, N.W.8.

Release of Doctors

SIR,—At a recent meeting of Service medical officers which Dr. Hill was good enough to address on medical demobilization these facts emerged which I do not believe are generally known, and as they may help to clear away some misapprehension on medical demobilization I feel that they should be given publicity.

1. The Central Medical War Committee is an advisory body only, and has no power to plan demobilization. The Services are at liberty to accept or reject any advice the committee may offer, although presumably the committee can apply to higher authority if not satisfied with Service plans.

2. I understand that the committee has so far failed to obtain any plan or time-table of demobilization from any of the Services, although it is still pressing for this information. The groups which have been released so far have been put up by the Services themselves and not in co-operation with the committee.

3. It has been stated by the committee that every effort will be made to ensure that medical officers will be demobilized as "their" groups come up. It is now clear that this does not mean Service groups as a whole, but only that medical officers will be demobilized in group order. I believe that a large number of officers have misunderstood the committee's promise, and that it is still thought that the committee will endeavour to obtain release of medical personnel with their general demobilization groups. This misapprehension should be dispelled.—I am, etc.,

GEO. A. FRASER.
Squad. Ldr.

*** A full statement by the Secretary of the Central Medical War Committee dealing with points raised in this and a number of other letters will be found in this issue of the *Supplement* (p. 9).—ED., *B.M.J.*

Medical Certificates

SIR,—The result of the light-hearted or mercenary attitude of certain members of the medical profession towards certification, as is brought to the light of day by recent convictions, is now becoming evident. Even when, as a local medical practitioner for over twenty-five years, a Justice of the Peace for over twenty years, a "civilian medical practitioner" to the Forces on contract, and an Admiralty surgeon and agent, I go to the trouble of stating a case for compassionate discharge or other type of demanded certificate, I find that this is not enough: other people are asked to make inquiries. I am called to the telephone by a "welfare officer," who, when I guarantee the genuine nature of the application, at once says, "That will be all right"; or I have a letter from another source asking for further details, which already have been given if my original certificate had been read.

In one case alone I have counted the number of certificates (7 or 8) written by me in order that a very important issue can be settled. Every certificate has been couched in exactly the same terms of urgency. The unfortunate man involved has had various periods of leave granted. Not one has been enough; complete release is the only way out. I ventured to put the case, both for him and for me, more forcibly in my last effort, and his commanding officer refused to send it on to the next authority. I willingly wrote yet another certificate, but was sorry that the original had not been sent. Surely, this sort of thing should be stopped.—I am, etc.,

F. O. TAYLOR.

Coldingham, Berwickshire.

Assistantships

SIR,—One aspect of private practice as it exists at present has not yet been mentioned. I refer to the buying up of practices by busy N.H.I. practitioners and the employment of assistants to run these practices for them. In pre-war days salaries paid were usually low and altogether out of keeping with the dignity of the profession and the work done.

Any contemplated extension of the existing N.H.I. system should bear this point in mind; otherwise we shall see already prosperous practitioners waxing even richer by acquiring more patients, who will be looked after by their assistants. It is almost a form of exploitation of young doctors. Under ideal conditions, the employment of assistants should be prohibited altogether. A doctor whose practice is too large for him should be obliged to take a partner. We shall then have a more equitable system.—I am, etc.,

M.E.F. "MEDICO."

Medical Demobilization

SIR,—The reply of the Secretary of the Central Medical War Committee to Lieut.-Col. R. Gibson's letter (*Supplement*, June 30, p. 131) is disquieting. It is evasive and shelters behind Service policy and custom. I deal with one point only. The Secretary states that, as the committee is essentially a civilian one, serving soldiers are ineligible as members. I sympathize with Lieut.-Col. Gibson's wish for representation of serving doctors on the committee, but if the reasons against this are too weighty, may I suggest a compromise that would, I think, go far to satisfy doctors still in the Forces.

There are now a certain number of us who have served (in this war), but who, on account of ill-health, senility, or other reasons, have returned to civilian practice. We have seen both sides of the picture. We have seen Service life and now we carry "the almost intolerable burdens" of the civilian. Yet we have no axe to grind. I suggest, then, that the committee should co-opt some of us. We should do our best to represent the views of those still in the Forces and we should be free—an important point, this—from that restraint which the wearing of a uniform has on the expression of opinions that might conflict with those of Service Departments.—I am, etc.,

Wolston, Coventry. GEORGE CAMPBELL.

SIR,—I would like to endorse very heartily the views expressed by Lieut.-Col. R. Gibson in his letter on medical demobilization (*Supplement*, June 30, p. 131). As a regimental medical officer with four and a half years' service home and over-seas I would like to make a few observations on the same subject.

I fully appreciate the efforts which the C.M.W.C. is making with regard to medical demobilization, but Circular Letter D11 of May, 1945, does not greatly inspire any feeling of confidence for the future. I am not at all sure that the C.M.W.C. is fully cognizant of the feeling among Service medical personnel regarding demobilization and postgraduate training. I am at a complete loss to understand why it will be difficult to release medical officers under their appropriate age and service groups. Is the present ratio of one medical officer to 382 Army personnel still too low?

There is no doubt that there is a considerable wastage of medical man-power in the Services, and this has become all the more apparent now that the war in Europe has ended and units have assumed static positions on a peacetime basis. I can safely say, from considerable experience, that not more than *20%* of the work now being done by regimental and unit medical officers is that which requires the services of a qualified doctor. The remainder could be very adequately and efficiently performed by a trained nursing orderly and sanitary inspector or non-medical administrative officer. Perhaps the civilian board of the C.M.W.C. is not fully aware of this.

On the question of postgraduate training of Class 2 medical officers, one can only regard the two-weeks refresher course as being quite absurd if it is designed to make up on four to five years' loss of clinical knowledge and experience. Surely something more could be done than merely to "deplore" such a state of affairs.

May I offer a suggestion that refresher courses be organized now in the Services for personnel soon to be released; these surely could easily be conducted in general hospitals or other field medical units by Service medical personnel, many of whom were on the staffs of teaching hospitals before mobilization. Such courses would do much to help us regain some enthusiasm for our profession, to lift us out of the rut into which we have unavoidably drifted during the monotonous years of Service medicine, and to help us regain some confidence and ability in the work we shall be called upon to perform when we ultimately descend upon the diseased section of the civilian community.

In conclusion I would like to reiterate that "we are not unreasonable or impatient" and that our views are not stated entirely from purely personal interests; but a stage has been reached in the affairs of Service medical personnel which is producing much general discontent and uneasiness, and which must be handled now without further delay and with clarity of thought and action if we are to return to our civilian jobs with any degree of confidence and hope for the future.—I am, etc.,

GEO. W. R. MACGREGOR,
B.L.A. Capt., R.A.M.C.

SIR,—After reading in the *Supplement* of June 23 (p. 127, foot of col. 2), a statement by the Secretary of the Central Medical War Committee that "it is hoped that it will be rarely necessary for medical officers to be retained beyond the dates of the release of their age–service groups," I was dismayed to receive a memorandum from "higher authority" more or less contradicting this statement. This memorandum indicates that "there are no plans yet for the release of doctors beyond Group 11," due for release about August, 1945. This statement, coming two months after the end of the European War and many months after the formulation of the release scheme, suggests an appalling apathy on the part of the War Office Department concerned, and a serious lack of realism towards the problem of release of medical officers generally.

There is already a considerable waste of medical man-power in the Army, and in the medical departments of the other Services too, if the letters in the *Supplement* are to be believed. I, too, could quote many instances of wastage of medical officers. For instance, my camp is inspected by a hygiene sergeant (R.A.M.C.) and a hygiene corporal (R.A.M.C.) each month and the commanding officer also insists that I personally carry out an identical inspection. It is waste such as this that requires the retention of many medical officers in the Services who could be helping to relieve the acute shortage of doctors in civil life.

If the Central Medical War Committee wishes to alleviate the position of the civilian population as regards this shortage of doctors, it will have to press for the speedier release of Service doctors, as it is now obvious that the War Office have made no plans beyond August, 1945, and are determined not to release any more M.O.s than they can possibly help.—I am, etc.,

CAPTAIN, R.A.M.C.

SIR,—Lieut.-Col. Gibson's letter (*Supplement*, June 30, p. 131) calls for action by the medical profession. Many similar letters have appeared in the press, both medical and lay. There is evidence that, by more efficient organization, the Services could now liberate a number of medical officers. Few things can be more demoralizing than to be kept in enforced idleness while useful work is to be done in civil life. The Central Medical War Committee's circular letter exudes sympathy but gives little help.

Various high-ranking medical officers are holding temporary commissions. They have given much help and advice with regard to the care of combatants. Now that hostilities have ceased in Europe could not these officers assist their colleagues by inducing Service authorities to exercise real economy in the use of medical personnel? By this means long-service medical officers might look forward to early demobilization.—I am, etc.,

Northampton. C. C. HOLMAN.

SIR,—I have read with much interest Lieut.-Col. Gibson's letter (*Supplement*, June 30, p. 131). He has my sympathy, and I fully endorse his remarks. In my opinion there should be no difficulty in replacing Service medical officers when they are due for release, providing the C.M.W.C. insists that there shall be recruited a sufficient number of medical men from civilian life, both practitioners and specialists alike; no man, whether civilian or Service, is irreplaceable.

In the R.A.F. any medical officer, if fit, is liable for duty in any part of the world, up to the age of 65 years. Any civilian doctor, if under 65 and fit, should do his turn in the Armed Forces; it is high time many of them were compelled to do so. Since my return last year from over-seas I have frequently heard from civilian doctors how overburdened with work they had been, and told what an easy life we Service M.O.s are leading. They omit to mention any point about the inflated incomes they are making in our absence, or that for six years of war they have been able to live in their own homes in peace and security, whilst we have joined up to serve our country in this present war.

We Service medical officers desire no sympathy or thanks, and if we have got ourselves into a hole we shall get out of it; but what we do insist on having is a fair deal. It is, however, gratifying to see that the Secretary of the C.M.W.C. states that men in uniform are not being forgotten. I sincerely hope that statement will soon be translated into facts. As a member who served in H.M. Forces in the 1914–18 war, and now in my sixth year of service in the R.A.F., I feel qualified to speak on these matters.—I am, etc.,

AUBREY D. GILL,
Squad. Ldr., R.A.F.V.R.

Medical Demobilization and Resettlement

SIR,—Writing, apparently, from India, your correspondent whose *nom de plume* is " Major, R.A.M.C. " states (*Supplement*, June 23, p. 127) that " . . . the Service medical officer will be quick to draw conclusions if he finds himself less favourably placed than those demobilized under arrangements made by a Government Department." This anonymous officer seems to have led the way himself in drawing conclusions with greater speed than accuracy.

How can he blame the profession (or its agent, the C.M.W.C.) for the present position unless he thinks that the profession has been too reticent in pushing its claims, as it may have been through patriotic feeling? So far as one can judge, the C.M.W.C. has laboured throughout the war to maintain an adequate medical service for civilians in the face of exorbitant Government demand for doctors. It is the experience of many (for instance, Surg. Lieut. R. Alexander, who writes in the same issue of the *Supplement* specifying a fit naval rating re-examined seventeen times within a twelvemonth) that these demands are exorbitant. Moreover, the recruitment of medical officers proceeds more energetically than ever, even now with Germany out of the war!

To my simple and untutored mind you could only blame for the overlong retention of doctors in the Services the party who is keeping them there, usefully or otherwise—to wit, the Government. The authorities may be actuated by the best of motives. They may argue broadly that n warfare it is safer with doctors (as with ammunition) to have too many than too few. Or they may regard the Far Eastern situation as calling for a specially great medical force to cope with the indigenous tropical diseases or the carnage they anticipate.

But nothing, unfortunately, can be put past Governments, and ulterior motives may possibly co-exist with the good—for example, the isolation from their normal *milieu* of large numbers of men who could at any time be released *en masse* to act at once as the nucleus of the projected State Medical Service and as a lever for enforcing it. I should not be dumbfounded with surprise if a final vast force of demobilized medical men were given discharge papers that had alluring advertisements or employment in such a service boldly attached to or even printed upon them.

I hope that I am all wrong in suspecting the State to have a notion of rigging the medical labour market. But they are in a position to do so, and in any case the maintenance of apparently excessive medical personnel in the Services keeps their civilian colleagues overworked and the population dangerously short of doctors. Therefore we must hope with Major, R.A.M.C." and the many serving officers who are avowedly of his way of thought that the C.M.W.C. will urge more energetically than ever the return of any and all who can be spared. It may be that discharges should be staggered in the interests of the officers themselves —e.g., so that each may have the best chance of gravitating to his rightful place in civilian life, but this object will fail to be achieved if snap legislation overtakes them while they are still serving owing to delay in demobilization. If it is achieved there should be work for all of them and a good service to the public—a result which should set at rest the forebodings of " Major, R.A.M.C." and convince him and the profession generally that it is capable of managing its affairs " without Government interference "—I should prefer to say " in spite of it."—I am, etc.,

Birmingham. PETER PARRY.

Demobilization of Medical Students

SIR,—In recent issues of the *Journal* there have been many letters about medical demobilization and resettlement, but very few seem to bother about the medical students in the Forces. Many of these boys came down in their exams in the " blitz " years; some were homeless. They will be faced with the huge medical curriculum after years of no study. It appears that these boys are forgotten and the profession as a whole is apathetic. —I am, etc.,

E. J. MURPHY,
Liverpool. Late R.A.M.C.

⁂ The Secretary of the Central Medical War Committee comments as follows: As stated in a footnote to a letter published in the *Supplement* of June 23 (p. 128) the Central Medical War Committee has made representations regarding the early release of medical students. Since, however, it is the declared policy of the Government to restrict severely the number of releases out of turn in Class B, it seems unlikely that a medical student will be able to obtain such release unless in exceptional circumstances.

A Royal Medical Service

SIR,—Now that the war in Europe is over and medical officers in the very early groups are being released, the opposing claims on doctors of the Services and the civilian population are again being argued. The Services can, however, reduce their demands most considerably by combining to form one Royal Medical Service, which, though having a Navy, an Army, and an Air Force Branch, would be under single control and would prevent the tremendous and wasteful overlap of doctors, hospitals, administrations, etc., which now exists. The advantages of similar documentation in all three Services would mean that it would be simpler and more economical.

The process of combining the three Services into one would not be as difficult as may be argued, and the chief Service objection to it would be the fact that there would be one Director-General instead of three, and a corresponding reduction in the higher ranks below Director-General. The economy of medical man-power generally would be marked, and the efficiency of the medical services increased rather than diminished.—I am, etc.,

B.L.A. LIEUT.-COL., R.A.M.C.

Cars and Purchase Tax

SIR,—I am writing to point out a curious anomaly to which some attention has been drawn by the press and which affects to a very great degree medical practitioners. On Form V.C.1 (P.C.), which is required for application to obtain a licence to purchase a new private car, and which licence is issued only for certain priority classes, high among them being the medical and nursing professions, there is in para. 4 the following declaration:

" I hereby certify it will be impossible to perform the work, which in my view is essential to the national interest, unless this application is granted."

The presumption is, therefore, that new cars can only be issued to those people whose work is regarded as being in the national interest, yet purchase tax on these cars is still to be payable. We have always been led to believe that purchase tax was virtually a luxury tax which was imposed for the purpose of curbing expenditure. Surely in the case of cars required in the national interest purchase tax should be remitted.—I am, etc.,

T. CRADOCK HENRY.

Doctors' Cars

SIR,—As one of many country doctors I have been using a car which is getting so old that costs are mounting daily in repairs alone. With my panel cheque cut in half by income tax and little in the way of private practice, it is a shock to hear the price which is to be asked for a new car. Although the income is halved, the long country journeys are not, and to pay between £400 and £500 for a suitable twelve-horse-power car is beyond my means. I have to carry water and oil on my journeys now owing to the lack of spare parts, so it can be imagined that repairs are only makeshift.

Surely if N.H.I. patients are to be visited at distances of five to ten miles some alleviation of working expenses should be allowed by those responsible for medical benefit under the Act. No matter what type of State Medical Service comes, domiciliary units in these rural areas will always be required.

A grant towards purchase of a car is the obvious and just remedy for this state of affairs.—I am, etc.,

Totnes, Devon. IAN M. JEFFERISS.

BRITISH MEDICAL ASSOCIATION

ANNUAL REPRESENTATIVE MEETING, 1945

The Annual Representative Meeting of the British Medical Association will be held at B.M.A. House, Tavistock Square, London, W.C.1, on Tuesday, July 24, and succeeding days.

MOTIONS BY DIVISIONS AND BRANCHES

PRELIMINARY

International Relations

Motion by PADDINGTON: That the Council be asked to approach the appropriate Government Departments and members of the newly elected House of Commons with a request for an early recognition of the medical profession as being entitled to diplomatic representation (like other national interests) through health attachés or counsellors at British Embassies and Legations in foreign countries, which is now considerably overdue.

Public Relations

Motion by GLASGOW: That the chairman of the Public Relations Committee inform the meeting of the arrangements made for showing the film " The Family Doctor."

Negotiating Committee

Motion by BRADFORD: That the Council be requested to give concrete proposals safeguarding private practice under the 100% National Health Service. That any person shall be at liberty to make such arrangements outside the National Health Scheme for his medical attention on any specific occasion, and that no medical practitioner shall be compelled to give any medical attention whatsoever to the said patient under the service during continuance of such specific occasion.

GENERAL PRACTICE

Doctors' Cars

Motion by Glasgow: That steps be taken to facilitate priorities in respect of doctors' cars and for the abolition of purchase tax in connexion with them.

Local Advisory Committees on Industrial Health

Motion by Sheffield: That local advisory committees on industrial health representing the doctors, employers, and employees should be appointed in suitable industrial areas.

PUBLIC HEALTH

Education Act

Amendment by Bristol: That the A.R.M., having considered the Report of Council on the 1944 Education Act, stresses the following observations. It upholds the principle that the health of the child should be in the care of the family doctor, and it should be his responsibility to obtain any necessary consultant services. Hence it deplores the acquiescence by the Council in the provision for direct reference to hospital by the school medical officer, and strongly protests against the Council's failure to promote the doctor–patient relationship as between the family doctor and the child.

Motion by East Yorkshire: That this Branch protests against the introduction by the Government of a comprehensive medical service for school-children, which is not part of the proposed National Health Service, without consultation with the medical profession; and seeks clarification of the conditions and scope of such school medical service.

Askwith Memorandum

Motion by Sheffield: That negotiations with regard to salaries and conditions for doctors in the public health and municipal hospital services be conducted with the Government as part of the negotiations for the whole profession and not as on previous occasions with the Association of Municipal Corporations and County Councils.

Vaccination Fees

Motion by Sussex: (1) That this Branch considers that the fees paid to public vaccinators are still totally inadequate and that the Council be asked to press for uniformity throughout the country. (2) That the scale of fees paid should be the same as has been formulated for the West Riding administrative area of Yorkshire, which has been accepted by the Yorkshire Branch Council of the B.M.A. and approved by the Ministry of Health (*Supplement*, May 19, p. 94)*, with the addition: (*a*) that such fees should be paid whether vaccination is successful or unsuccessful, and (*b*) that a mileage charge of 2s. (two shillings) a mile per vaccination over two miles be paid.

National Maternity Service

Motion by Bradford: That this meeting approves generally the principle instituted by and policy pursued according to the Report of Council, 1945, and is particularly emphatic in agreeing with paragraph 32. It also draws attention to and deplores the views expressed in the Nuffield Hospital Report for Yorkshire on page 90 where " continuous compulsory supervision of children " by a small group of medical men is advocated, and on page 95 where the removal of mothers and children from family general practitioner attendance is advocated, and draws the attention of Council thereto.

Equal Pay and Cost-of-living Bonus

Motion by Morpeth: That the Council be instructed to approach the appropriate authorities—e.g., the local authorities and Government Departments—to ask that the cost-of-living bonus be given to pensioners formerly employed by them.

ORGANIZATION

Regional Secretaries

Amendment by Glasgow: That this meeting re-affirms the 1943 A.R.M. decision regarding the appointment of Regional Secretaries.

NAVAL AND MILITARY

Demobilization

Motion by Glasgow: That this meeting is dissatisfied with the present demobilization scheme.

Motion by Sheffield: That steps should be taken by the Association using the peripheral machinery of Branches and Divisions and all other possible means to ascertain what numbers of medical practitioners can rapidly be absorbed into civilian work as demobilization proceeds.

Recruitment of Doctors

Motion by Bristol: That the A.R.M. proposes that if it is necessary to call up further age groups of doctors from civilian practice—an extremely serious step and one for which there is considerable lack of conviction—it will be advantageous for all concerned to do this from the 40–55 age groups.

Meetings of Branches and Divisions

Isle of Wight Division

At the annual meeting held at Osborne House, Cowes, on June 22, Surg. Rear-Adml. C. P. G. Wakeley gave an interesting lecture to a large audience on " 'D' Day Surgery." Earlier the meeting had expressed its appreciation of the services of the Division's chairman, Surg. Rear-Adml. B. Pickering Pick, during his term of office. Dr. G. M. Balfour was then elected chairman for the ensuing year, and Dr. Howie Wood, Representative in the Representative Body. The Annual Report of Council was considered and resolutions for the A.R.M. were passed.

H.M. Forces Appointments

ARMY

Col. (Acting Major-Gen.) E. A. Sutton, C.B.E., M.C., late R.A.M.C., to be temp. Major-Gen.

ROYAL ARMY MEDICAL CORPS

Lieut.-Cols. E. L. F. Nash, M.C., and J. H. Bayley, M.C., having attained the age for retirement are retained on the Active List (supernumerary).

Major (War Subs. Lieut.-Col.) G. A. Walmsley, O.B.E., to be Lieut.-Col.

Major E. H. Hall to be Lieut.-Col.

Major S. S. Dykes has reverted to retired pay on account of disability, and has been restored to the rank of Lieut.-Col.

Short Service Commission.—War Subs. Capt. I. W. Caldwell, from Emergency Commission, has been granted a Short Service Commission in the rank of Lieut., and to be Capt.

TERRITORIAL ARMY

Royal Army Medical Corps

Col. A. M. Johnson, C.B.E., M.C., T.D., to be Hon. Col. 42nd (East Lancs.) Divisional R.A.M.C.

War Subs. Major W. A. Liston, from R.A., T.A., to be War Subs. Major.

War Subs. Majors J. G. McDowell and T. F. Briggs to be Majors.

Capt. A. Houlbrooke to be Major.

LAND FORCES: EMERGENCY COMMISSIONS

Royal Army Medical Corps

War Subs. Capts. H. I. C. Balfour and D. E. Dunnill have relinquished their commissions on account of disability, and have been granted the honorary rank of Major.

War Subs. Capts. B. O. Reed, N. S. Barnett and A. S. Murdison have relinquished their commissions on account of disability, and have been granted the honorary rank of Capt.

Capts. F. T. Pullicino and F. Zammit, holding Governor's commissions in the Army Medical Corps, Malta Territorial Force, have been granted Emergency Commissions in the rank of Lieut.

To be Lieuts.: T. K. Abbott and J. Battersby.

WOMEN'S FORCES

Employed with the R.A.M.C.

War Subs. Capts. (Miss) M. W. Bowen and (Mrs.) M. R. D. Hart have relinquished their commissions.

(Mrs.) Aileen J. Carlson to be Lieut.

ROYAL AIR FORCE

Wing Cmdr. E. Thompson has retired on account of medical unfitness for Air Force service, retaining his rank.

Royal Air Force Volunteer Reserve

Squad. Ldr. (Temp.) B. J. Bickford has been granted the rank of War Subs. Squad. Ldr.

Fl. Lieut. B. Plowright has been granted the rank of War Subs. Squad. Ldr.

Fl. Lieut. M. W. Robinson has resigned his commission, retaining his rank.

J. R. C. Holmes to be Fl. Lieut. (Emergency).

To be Flying Officers (Emergency): V. Altman, A. Brown, and D. W. R. Lyle.

ROYAL CANADIAN AIR FORCE

A. Gardner Watson to be Fl. Lieut.

INDIAN MEDICAL SERVICE

Emergency Commission

Capt. G. M. F. Dover has relinquished her commission on account of ill-health, and has been granted the honorary rank of Capt.

ARMY IN BURMA RESERVE OF OFFICERS

Emergency Commission

B. S. Joshi to be Lieut.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Mr. J. C. Ainsworth-Davies, F.R.C.S., at 48, Wimpole Street, W.1.; Dr. Ernest Bulmer, F.R.C.P., at 3, Arthur Road, Edgbaston, Birmingham.

POSTGRADUATE NEWS

The Fellowship of Medicine announces th following course in preparation for the Primar F.R.C.S. examination: Lecture-demonstrations i Anatomy, Physiology, Pathology and Bacteriology on Mon., Wed., and Fri., Aug. 13 to Oct. 15. Tw lectures each day at 6 p.m. and 7.15 p.m. Detaile syllabus obtainable from the Fellowship of Medicine 1, Wimpole Street, W.

WEEKLY POSTGRADUATE DIARY

Edinburgh Postgraduate Lectures.—At Edinburgh Royal Infirmary, *Thurs.*, 4.30 p.m., Prof J. R. Learmonth: The Clinical Use of Penicilli

BIRTHS, MARRIAGES, & DEATH

The charge for an insertion under this head 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6 *for each six or less. Payment should be forwarde with the notice, authenticated by the name an permanent address of the sender, and should reac the Advertisement Manager not later than first po Monday morning.*

BIRTH

Cameron.—On July 10, 1945, at the Victoria Nursin Home, Ripon, to Janet Cameron, M.R.C.S L.R.C.P., wife of Lt.-Col. D. C. Cameron, R. (S.E.A.C.), a son.

MARRIAGE

Robertson—McNaughton.—At Beechgro Church, Aberdeen, on July 6, 1945, Capt. Jam D. Robertson, R.A.M.C., Stranraer, to Evel Patricia McNaughton, Q.A.I.M.N.S./R., Peterhea

DEATHS

Kayne.—On June 29, 1945, George Gregory Kayn M.D., M.R.C.P., D.P.H., Physician in t Tuberculosis Service of the Middlesex Coun Council.

MacMurtry.—On July 5, 1945, John Alexand MacMurtry, M.D., Maxwell Park, Bange Co. Down, formerly of Coulsdon, Surrey.

---

*The West Riding scale of fees is as follows:

	s.	d.
Child entered on list of vaccination officer	2	0
Not entered on list but vaccinated ..	2	0
In respect of vaccination:		
Successful primary vaccination or revaccination at surgery or elsewhere ..	5	0
Successful primary vaccination or revaccination at home of person ..	10	0
Successful vaccination or revaccination of each additional person at the same time	7	6
Medical officers of institutions who are public vaccinators to those institutions —vaccinations and revaccinations ..	3	6

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL

LONDON SATURDAY JULY 28 1945

HEARD AT HEADQUARTERS

This Week's A.R.M.

The Annual Representative Meeting this week in London has a light agenda, as was to be expected in view of the fact that the last Representative Meeting took place only a little more than seven months ago. After the experience of the last two or three years, to have only one hundred motions on the agenda paper, many of them formal and many others non-controversial, makes it seem like a holiday meeting. It is not easy to see how the proceedings can be extended over the two and a half days allotted to them, but light agendas are sometimes deceptive. At all events it will enable the business to go forward at a more leisurely pace than is possible when a harassed chairman has to find his way through some five hundred motions and to incur unjust strictures because, one motion having been disposed of, he has ruled that six others with only a slightly different shade of meaning must go with it.

Only some fifty of the motions are from Divisions and Branches. The first, from Paddington, is of some interest. It urges an approach to Government Departments and Parliament with a view to securing diplomatic representation of the medical profession through health attachés and counsellors at embassies and legations in foreign countries.

American Colleagues

The United States Forces are leaving this country, and their medical officers with them. A letter has been received by the Association from Major-Gen. P. R. Hawley. It is written from the European Theatre of Operations of the U.S. Army and speaks of the great regret with which our American visitors view their departure. He adds that one of the reasons for such regret is the breaking of the happy links which have been formed with the medical profession in Great Britain. Gen. Hawley says that it is his pleasant privilege as well as his urgent duty to express to the B.M.A. the deep appreciation of the medical officers "for all the courtesies extended to them by your splendid organization."

Their departure will be sincerely regretted by their British colleagues. The presence of American medical officers has been like a refreshing breeze at B.M.A. House, at the Royal Society of Medicine, and elsewhere. They have proved most companionable. In clinical and scientific meetings they have thrown their experience and ideas freely into the common pool. Many permanent friendships have been made, and the cause of Anglo-American unity has been greatly advanced by this most welcome of war invasions.

Professor R. M. F. Picken

A great loss will be sustained at headquarters if Prof. Picken adheres to his decision, following his appointment as acting provost of the Welsh National School of Medicine, to bring to an end his valuable work on the Association's Council and committees. He finds that his new office will prevent him from making the frequent journeys between Cardiff and London which his work for the Association has hitherto entailed. Prof. Picken has been a member of the Council since 1930. His work over many years for the Public Health Committee has been outstanding, and it is difficult to think of that committee without him in the chair. He has been a most valuable liaison officer between the Association and the Society of Medical Officers of Health, and although his own experience has been in the field of public health he has always shown an informed sympathy with the position of the general practitioner. His quiet voice in debate, in large assemblies and small committees, has carried great authority and has led to many wise decisions and perhaps prevented some unwise ones. It is to be hoped that even if his work for the Association has to be lessened there will not be so complete a withdrawal as that on which he has regretfully decided.

Purchase Tax on Doctors' Cars

Mr. Harold Nicolson recently called attention to the curious fact that one's wartime wardrobe has a tendency to fall to pieces all at once—not in sequence, one suit after another, but simultaneously. Something like that is happening with doctors' cars. Many of them, after enduring the strains of wartime practice, are getting almost beyond repair. One doctor would have been hard put to it if he had not been able to borrow a car from his patients. These old cars can no longer be offered in part exchange, and the cost of replacement is prohibitive.

The Secretary of the Association has lately written to the Treasury asking on behalf of the medical profession that the purchase tax on new cars supplied to doctors should be removed at the earliest possible moment. He reminds the Treasury that new cars can be supplied only against licence to purchase, and the high measure of priority accorded to medical men during the war is evidence that they are regarded as giving an essential public service. Alike in town and country, the roadworthy motor-car of the doctor is not a luxury but necessary equipment of his profession, without which he cannot perform the public service demanded of him. Until recently a large proportion of reconditioned ex-Service cars were allowed to doctors, but, following a decision of the Minister of War Transport, these are no longer available. Apart from the practitioner who has to replace his car, the position of the doctor returning from the Forces and establishing or re-establishing himself in general practice has to be considered. He will have enough calls upon his resources without having to buy a car at an artificially raised price. Certain trade vehicles are exempt from purchase tax, and it seems as if an equally good case could be made out for the extension of this concession to a vehicle which is a necessary part of an essential service.

Rehabilitation Facilities

The Rehabilitation Committee of the B.M.A. is getting into its stride. New members include two Scottish authorities on the subject—Brig. F. A. E. Crew and Dr. Thos. Ferguson—as well as Dr. H. M. C. Macaulay, of Middlesex. The first stage of the committee's work has been the compilation of memoranda on existing facilities and on rehabilitation from various aspects. These have been produced by members of the committee. The one on existing facilities is the work of the deputy chairman, Dr. Vaughan Jones, of Leeds; it is supplemented by a list of all the centres and clinics already established. It is surprising, when one thinks of the comparative newness of the subject, how extensive those facilities are: The Ministry of Health has set up 21 special orthopaedic centres for the physically disabled; half of these are permanent orthopaedic hospitals carrying on peacetime functions in addition to emergency work. Then there are about 60 long-stay fracture departments, and 200 short-stay ambulatory ones, and 12 neurosis centres under the E.M.S., and about 120 neurosis clinics. The committee has an important work to do, but few committees have started their task so well documented.

Consultation

To my story under this heading two weeks ago a reader adds the following: "My partner had occasion to send a child with a squint to the ophthalmic surgeon at the local infirmary. This correspondence took place: 'Dear R——. She squints.—Yours, A.' 'Dear A.——. She does!—Yours, R.'"

After July 30 the address of the Mid-Cheshire Division of the B.M.A. and Local Medical War Committee will be: Williams Deacon's, Bank Chambers, The Downs, Altrincham. Telephone Altrincham 3785.

GENERAL MEDICAL COUNCIL

SPECIAL SESSION

A special session of the General Medical Council to hear outstanding disciplinary cases was opened on July 17, Sir HERBERT LIGHTFOOT EASON presiding. Dr. W. W. Dalziel Thomson was introduced as representative of Queen's University, Belfast, for a term of five years.

Insurance Practitioner's Failure to Visit

The Council considered the case of Dr. Gerald Donagh Flatley, registered as of Stepney Drive, Scarborough, who was summoned on charges relating to his alleged failure to visit five insured persons on his N.H.I. list, thereby committing breaches of subclause (5) of clause 9 of the terms of service applicable to insurance practitioners contained in Part I of the First Schedule to the National Health Insurance (Medical Benefit) Regulations, 1936. Dr. Flatley appeared in answer to the charge ; he was not accompanied by counsel or solicitor.

Mr. Winterbotham, solicitor to the Council, said that this case was of a type unlike any which had previously come before the Council. Under the subclause cited a practitioner was required to visit and treat a patient whose condition required it at any place where the patient might be at the time within the district in which the practitioner had under the terms of service undertaken to visit patients. The complainants were the Ministry of Health.

The first of the five specific charges, which all concerned Dr. Flatley's practice in Salford, related to one R. Williams, who, on Feb. 20, 1943, had a severely swollen knee. Members of his family sent for Dr. Flatley, on whose list he was, but at no time between Feb. 20 and 24 did Dr. Flatley visit him, and as a result he was unable to obtain a certificate. Certain of Williams's relatives testified in the witness-box to making repeated calls at Dr. Flatley's surgery and to leaving messages with the caretaker.

The second case was that of William Taylor, an insured person on Dr. Flatley's list, whom Dr. Flatley failed to visit in illness, despite repeated calls, between June 22 and July 5, 1943. On one occasion, when seen by a relative, Dr. Flatley explained that he had not called because he had five Taylors on his list and did not know to which the call referred, but even after this he failed to visit.

In the third case a Mrs. Hughes, widow of John Hughes, testified that her husband, who was on Dr. Flatley's list, was taken ill with severe pain in the ear and giddiness on April 3, 1944. She sent for Dr. Flatley on the following morning, but he failed to attend, and in spite of repeated requests made no call until April 10, on which date Mr. Hughes went into hospital. He was discharged on May 6, but immediately fell ill again and returned to hospital, where he died on May 21 from septicaemia following a mastoid operation. Dr. Flatley made the excuse, when seen on one occasion, that he had been unable to find the street, but it was only ten minutes' walk from his surgery.

The fourth case concerned a Fred Ashton, who testified that he was taken ill on July 26, 1944, and had a temperature of 103°. His wife went to Dr. Flatley's surgery, and the doctor said that it was probably malaria, prescribed some quinine tablets, and promised to call and see him. But he did not call in response to that or subsequent requests, and eventually another doctor was called in, and said that there was fluid in the left lung. Ashton was admitted to hospital with lobar pneumonia and was kept there for eight weeks.

The fifth case concerned one William Beckett, with regard to whom it was alleged that Dr. Flatley had failed to treat him at any material time, except on one occasion he visited and prescribed poultices to prevent pneumonia.

Dr. Flatley was afforded the opportunity of asking questions of the various witnesses, but did not do so. The President said that if he did not challenge these witnesses he must be taken as accepting their evidence as true.

Dr. Flatley said that the only statement he wished to make was that he had suffered from malaria, contracted on active service, and also from oedema of the legs. In consequence he had not been able to work as he would have liked to do. Further, without any wish to blame his colleagues, matters had been made difficult in Salford by the recent erasure of the names of two Salford doctors from the *Medical Register* and the suicide of another, while one doctor had refused to attend any of his patients unless they would transfer to him. He had approximately 1,100 patients on his list. He lived 250 yards away from his surgery, which was in charge of a caretaker, who when he was not there would direct people to his private address. Asked whether he had other responsibilities, he said that he was an Admiralty surgeon and also did a fair amount of private work. He thought it possible that a former caretaker, whom he had to dismiss, had not transmitted messages in some of these cases. Asked whether he had a bad memory or a very large practice, he replied that he had a combination of both.

Does that mean that you have no explanation, or that you do not wish to give one ?—I have no explanation; I can only say that I do not recollect the occurrences.

Have you made any deputizing arrangements ?—I have a working arrangement with another doctor.

Were those arrangements in force at the date of these cases ?—They have been in force ever since I went there, at Christmas, 1942.

Has the Salford Insurance Committee made representations to the Minister of Health ?—Yes.

Has the inquiry been held ?—Yes, it has been held.

Have any findings been promulgated ?—No, I think not.

You seem very vague about it.—I am very vague about the whole thing.

Are you still on the Salford panel ?—Yes.

After deliberation *in camera* the Council found that the facts alleged against Dr. Flatley had been proved to its satisfaction. In respect of the facts so proved the Council judged him to have been guilty of infamous conduct in a professional respect and directed the Registrar to erase his name from the *Medical Register*.

False Statement in Cremation Certificates

The Council considered the case of Dr. Harry Anderson Mackay, registered as of Clifton Road, Aberdeen, who appeared on the charge that on July 28, 1944, at the Court of the Sheriffdom of Aberdeen, Kincardine, and Banff, he was convicted (after having pleaded guilty) of the following offence—namely, when required under the Cremation (Scotland) Regulations, 1935, to issue confirmatory medical certificates he knowingly and wilfully made false statements in a material particular, in contravention of the False Oaths (Scotland) Act, 1933, section 2, (nine charges), and was fined £50. Dr. Mackay attended, accompanied by Mr. R. S. Davies, counsel.

Mr. Winterbotham explained that under the regulations in question the doctor issuing a confirmatory certificate—certificate C—was required to state whether he had interviewed the practitioner who had attended the deceased and who had issued certificate B. Dr. Mackay had certified that he had so interviewed the other practitioner, but in nine cases it was alleged he had failed to do so.

Mr. Davies, on behalf of Dr. Mackay, said that he had punctiliously fulfilled all the other requirements—that is to say, he had examined the bodies of the deceased persons, had obtained full information as to the last illness and death, and in most, if not all, of the cases had questioned the relatives. He satisfied himself beyond reasonable doubt that the deceased person did not die a violent or unnatural death or a sudden death of which the cause was unknown. He had omitted, however, in these nine cases to follow what was otherwise his invariable practice of interviewing the medical practitioners who had signed the other certificate. This was due to oversight and pressure of work. He had tried to get in touch with the practitioners at the time, but being unable to do so had signed the certificate, intending to obtain the necessary interview later. Out of the many hundreds of certificates of the kind which he had signed, there were only these nine covering a period of two years in which the police were able to discover any irregularity. Since the proceedings started he had granted no more such certificates. Counsel recited the ascertained cause of death in each of the nine cases. There was no suggestion whatever in any of the cases of the smallest malpraxis or impropriety. Dr. Mackay had loosely allowed his own common sense to override the technical observance of the regulations. Counsel suggested that the real safeguard in these matters was the examination of the body, and that the interview between the two practitioners which was insisted on must often be perfunctory. He put in a testimonial signed by 68 doctors practising in and around Aberdeen speaking in high terms of Dr. Mackay's character.

The Council found the fact of the conviction proved, and the President said that the Council took a grave view of such misdoing, but in the circumstances of the case it did not see fit to direct erasure of Dr. Mackay's name.

Unlawful Use of Motor Fuel

The Council considered the case of Dr. Abraham Clein, registered as of Huyton Lane, Liverpool, who was summoned following a conviction at Prescot on Oct. 19, 1943, of the unlawful use of motor fuel, on which occasion he was fined £40 and costs, and on Oct. 3, 1944, of permitting the unlawful use of motor fuel, when he was fined £4 and costs.

Mr. Winterbotham, the Council's solicitor, said that the first conviction arose out of a journey which Dr. Clein made in his car from Liverpool to Rhyl. According to his statement, his wife, children, and maid travelled by train from Liverpool, and he, having to attend to his practice in Liverpool, drove down in his car. He explained to the police that his wife assisted him in his practice and was returning to Liverpool in the car. In reply to a letter from the Registrar after the first conviction, Dr. Clein wrote that the whole unfortunate incident arose out of the misinterpretation of a letter from the petroleum officer, adding that had he intended to commit a crime or hinder the war effort he would not have entered into a correspondence with that official. The second offence arose out of an incident when the police saw Mrs. Clein driving the car. When the doctor was asked if he had allowed his wife to use the car he replied that he had ; she was taking the children to a school concert. When it was pointed out that other transport was available, he replied that his wife was essential to him at surgery hours.

On Dr. Clein's behalf it was pleaded that if the petrol had been used more recently there would have been no offence at all, because, with the restoration of the basic petrol ration in the last few months, the whole matter had been modified.

A number of testimonials were put in. The Council did not see fit to direct the erasure of the name from the *Register*.

Correspondence

Unemployed Doctors in Britain

SIR,—Two cases have recently come to my notice of medical men with long war service in the British Army who will shortly be faced with unemployment. The first case is that of a British-born subject with an English wife, domiciled in England, who has served in the R.A.M.C. since 1940 in Libya, Crete, and Sicily. He has, however, a French degree which he took at a time when he did not intend to practise medicine but to engage in research work. The second case is that of a Polish doctor with three and a half years' service in the R.A.M.C., two and a half of them in West Africa. It has become impossible for him to return to his own country.

Both of these men have been given to understand that it will not be possible for them to practise in England until they have taken an English qualification and that they will not be excused the pre-clinical work. Neither can afford the time or money for the full pre-clinical and clinical courses required by the Conjoint Board. It seems likely that there will be other medical men similarly placed, that we shall have a particular duty towards them in view of their military service with the British Forces, and that with the prospective shortage of doctors there should be room for their services.

I write to inquire whether similar cases have come to the notice of others, and what machinery should be set in motion to ensure that their difficulties will receive fair consideration.—I am, etc.,

Oxford. JOHN A. RYLE.

Voting at Representative Meetings

SIR,—I was sorry to see in the letter from the Chairman of the Representative Body (*Supplement*, July 21, p. 11) some indication that he considered my letter of the previous week to be in the nature of a personal attack on the Chairman of Council and himself. This is not so. It is the system I am concerned with, not the personalities of those who run it. Much as I deplore the views held by Dr. Dain, I believe in the sincerity with which he holds them and much admire the ability with which he puts them through. Of Dr. Peter Macdonald's personal impartiality I have no doubt whatever.—I am, etc.,

Andover. J. A. BALCK-FOOTE.

SIR,—As one of the representatives of the Reading Division I write in whole-hearted support of Dr. Balck-Foote's timely letter. I had come to similar conclusions myself. With regard to the power of any future Minister to alter terms of service and remuneration, etc., I put this particular point myself to the Minister in a conversation that I had with him, and I was not satisfied with the answer I received. It seems to me that the medical profession is in the vanguard of the fight for reasonable individual freedom and liberty of the subject. If we fail and medicine becomes nationalized, I believe strongly not only that our medical liberties will go by the board, but that before long our patients' liberties, privacy, and freedom will go too. There is no reason why the medical profession should not be allowed to administer a nation-wide service as free from interference from the executive and party politics as the judiciary.

With regard to a national medical service being closely related to and dependent upon a scheme of social security, this would, I consider, be politically dishonest in view of the shortage of medical man-power, because to run such an interdependent scheme would require at least double, probably treble, the number of doctors that are in practice in normal times, and this increase of medical man-power cannot be achieved for at least twenty years without seriously lowering the standards of medical training, efficiency, and integrity, and if this was done, again the patients would suffer. It is my firm belief that the medical man must stand up for his patient not only in matters that affect his health and in the prevention of disease but in any matter that may affect that patient's privacy, honour, and peace of mind. If the medical men of this country keep this in the forefront of their minds and are prepared to break off negotiations if this or any other Government does not accede to these basic principles, then we can win the day for both the public and ourselves. —I am, etc.,

Caversham. S. F. LOGAN DAHNE.

SIR,—Permit me to thank Dr. Balck-Foote for his letter (*Supplement*, July 14, p. 7), which is a pleasure to read, not only for its matter but also for the clarity of its English.

The mock democracy in medico-political meetings (not alone in the big ones, by the way), which he so ably describes, may perhaps be inherent in the trend of events. So long as doctors were free to practise medicine this kind of difficulty did not arise. When Dr. and Mrs. Smith or Jones bought a practice, or he put up a plate, the success or failure of their venture depended solely upon their own efforts; any question of policy being a relatively simple affair to be discussed over the evening meal or in the privacy of the bed-chamber. But a medical "service" is a totally different proposition (and how the word "service" is overworked to-day with its suggestion, at once smug, cunning, and false, of labour for love !). A "service" must be administered, but efficient administrators are rare, especially in a profession whose members have chosen to work in the field of science and of art and craft.

In these circumstances the rank and file, conscious of their own shortcomings and realizing that the chairman is probably the most suitable man for the job, also that, if he were to resign no one would be eagerly forthcoming to fill the breach, are tempted to lie low and to leave the big decisions to the few. And so the principle is conceded, and the doctors are left to wrangle over points of detail, while the plans go forward behind the scenes for the next attack.

And the moral ? Well, for that I suppose we may turn to the old tag ending in the words "eternal vigilance." But if we value freedom then enough of us must be willing to work for it, to study, and if necessary to suffer. In conclusion, we may confidently hope that Dr. Balck-Foote will soon find new scope for those qualities which our profession badly needs at this fateful moment of our history.—I am, etc.,

Uckfield. W. R. E. HARRISON.

Voting for Members of Council

SIR,—The result of the election of members of Council of the B.M.A. for Group C (Isle of Man, Lancashire and Cheshire) and Group L (Southern Surrey) shows that in Group C 850 voting papers were returned, number issued, 2,754 ; and in Group L 561 voting papers were returned, number issued, 1,528 ; which means that only one-third of the doctors voted. It is a very poor state of affairs that a body of educated men like the profession should not use its vote, and take so little interest in the election of councillors, who do so much for the welfare of the profession. Granted that all the candidates are men of integrity and will do their best for the profession ; still, a large poll and an interest in the election would encourage them in their work. If medical men do not take an interest in the election of the governing bodies, and attend the B.M.A. meetings, they will have no grounds to grumble at the terms of the future health services.—I am, etc.,

Dunscar, Bolton. HAROLD ROBINSON.

Medical Immobilization

SIR,—As hostilities are well over in Europe great numbers of doctors and nurses must be idle with the relatively fit members of the armed Forces, while the cries of the civilian sick are heartrending to the decimated ranks of the profession at home, who are on the verge of exhaustion in vainly attempting adequate service to increasing illness.

Even if it is injudicious suddenly to demobilize the large majority of our professional elements, surely, in the names of intelligence and humanity, they need not remain immobile when their skill is so sorely needed by civilian comrades. Let the great numbers, having their vacant pre-war practices and posts, be granted temporary leave to return to them, pending the disbanding of the armed Forces, which is inevitably a slow process. The sick are constantly refused admission to hospital, yet wards might be reopened, given the missing personnel to work them.

"Nero fiddles while Rome burns" and England apparently leaves doctors and nurses tied up in red tape when thousands of its citizens are suffering or dying for lack of succour!—I am, etc.,

Bristol. A. WILFRID ADAMS.

Medical Demobilization and Recruitment

SIR,—I have followed with growing concern the correspondence appearing in the medical and lay press regarding medical demobilization, and find myself in considerable sympathy with the views expressed by Service doctors. It seems to me that, despite the many difficulties to be overcome, it should be possible to arrange a wide exchange of Service and E.M.S. medical men, with the object primarily of releasing those in uniform, and, taking a longer view, in order to avoid the inevitable feeling of injustice which will remain in the years to come. Many of us in civilian work have been ready to serve since the outbreak of war, but despite repeated efforts to do so have been instructed to remain at our posts. I feel confident that there are many like myself who are willing, for the reasons I have stated, to exchange their position with men of similar training and experience in the Service for duty at home or over-seas until general demobilization.—I am, etc.,

R. G. PULVERTAFT,
Grimsby. Orthopaedic Specialist.

Release of Doctors

SIR,—It has been stated that, because of the shortage of medical officers, particularly specialists, in the R.A.M.C. available for service in the Far East, the following medical officers are now eligible for posting to the Mediterranean, India, and S.E.A.C.: those in age-and-service group 16 or over who (*a*) have less than 2½ years' operational oversea service; (*b*) have any length of non-operational oversea service, exclusive of those who have served for 1 year 9 months or more in M.E.F., B.N.A.F., or C.M.F. These latter are eligible for exchange-posting with medical officers in the U.K. or B.L.A. This means, in effect, that a medical officer who has served since the beginning of the war, who is now aged 36 and who may have spent 3 years in West Africa, may have to look forward to a further 2 years' oversea service. It is a generally held opinion among many medical officers at present in B.L.A. that no M.O. would raise any objection to having to do this if he felt that there were no other doctors available, and that there was going to be any real necessity for the services of so many medical officers in the Far East, but it is felt that this is not the case.

It was said about 1½ to 2 years ago that twice as many medical officers would be required in the Far East as were going to be employed in Europe. We accepted that statement as an authoritative pronouncement, but have since come to the conclusion that the R.A.M.C., at any rate, is too liberally supplied with doctors and that the authorities have over-insured in medical officers. There is ample evidence of this. For instance, there have been many letters, published in the medical press and emanating from Service M.O.s, complaining of the paucity of medical work that they are called upon to do. There would be no such letters or complaints from doctors in a merely adequately staffed, as opposed to over-staffed, organization. Again, it is well known that many medical officers are employed on purely administrative duties. This they would not be doing if they were required for medical duties pure and simple. Lastly, it is known that not a few M.O.s spent quite a considerable proportion of their service in the B.L.A. in "Reinforcement Holding Units,"—a self-explanatory term—and did no medical work there at all.

The only conclusion that one can come to, after considering the above facts, is that perhaps the same number of M.O.s as have been in the B.L.A. would be found adequate for the Far East. Even active service does not provide the average M.O. with sufficient work to keep him busy, as many of us who have been through the campaign in North-West Europe can testify.

The Central Medical War Committee states in a letter issued to all doctors serving temporarily with the armed Forces: "In the E.M.S. in England and Wales there are at present approximately 110 B1 officers, liable and fit for military service, who have held their posts for two years or longer; and about half as many again who have held their posts for one year but less than two years." Presumably these officers are being conscripted now, but how many are considered unfit for active service as opposed to unfit for work as a doctor? We believe that there are very many E.M.S. officers and young general practitioners in this category, and we fail to see why they cannot now be conscripted into the Army to do what work there is for a doctor in the Army of Occupation. We can promise them that their health will not suffer as a result of the amount of work which they will be called upon to do. We also believe that many of them could, in spite of their disabilities, be employed in units in the rear of Divisional troops. If they were to be conscripted now, many of us who volunteered and joined up in the early months of the war, having been qualified for one year, could be released to try to pick up the threads of medicine again. There are not a few of us in this category, of course, who have been warned for service in the Far East, having done 6 of our 7 years as qualified men in the armed Forces—i.e., we are members of age-and-service group 16 or over. We consider that we have a very justifiable complaint in objecting to going to the Far East at all, let alone for possibly 2 years, while there are still doctors of the same age as we are, and some younger, who have not served at all.

We believe that the normal demobilization scheme for the armed Forces could be applied equally to the medical services, and that if the Central Medical War Committee would conscript those doctors whom we have indicated the efficiency of the Forces would not be adversely affected in the slightest degree. Indeed, we feel that it is almost a duty on the doctors who remain at home to see that we get the release that we feel we have now earned.—I am, etc.,

B.L.A. "1939, BURMA BOUND."

Release from the Navy

SIR,—No doubt this is one of many hundreds of letters with which you will be plagued by men of other Forces apart from my own Service, but I hope it may receive some attention.

Is it known to the medical profession that Naval M.O.s are not to be included in the demobilization scheme and that no provision for them has yet been put forward? Is it fair to the Naval section of the medical profession that their colleagues in the other two Forces should receive such a disproportionate advantage in being given their liberty so much earlier? Is it realized by the Central Medical War Committee, who evidently considers itself responsible for the welfare of serving M.O.s, that Naval doctors will inevitably suffer in the question of allocation of practices, appointments, etc., being the last to be demobilized?

We medical officers in the Navy meet M.O.s of the Army and R.A.F., far junior in age and length of service, who have already received notice of their return to civilian life. The implications of this selection demobilization must be so obvious to all members of our own profession that repetition of them is unnecessary, but if the "silent Service" is allowed to continue their famous policy of not giving any information away the B.M.A., which purports to represent the profession, should endeavour to make them talk. Even a promise of a definite date for our demobilization would be something to which we could look forward.

A letter of this nature is of little use unless its criticism contains a constructive element. If the demobilization of Naval M.O.s is delayed owing to that typically Service phrase, "the exigencies of the Service," then I suggest that the majority of conscripted doctors should be sent into the Navy to keep Naval demobilization on a level with the other Services, since it is freely admitted that the upkeep of medical man-power in the other Services is not considered so essential as in the Navy. With regard to a certain statement made in the Central Medical War Committee's circular to serving M.O.s "that in the E.M.S. there are approximately 110 B1 officers liable and fit for military service who have held their posts for two years or longer," let these men be conscripted at once and the majoriy into the Navy.

I for one have no doubt whatever that these 110 men have worked extremely hard for their two-year period in B1 jobs, but let them come and have their share of working for 5 years and more under a system whose central organizing ability and general inefficiency have to be experienced to be believed.—I am, etc.,

S.E.A.C. "NAVAL MEDICAL OFFICER."

*** The Secretary of the Central Medical War Committee states that the committee has not yet been able to obtain exact information regarding the future time-table of release of medical officers from the three Services. *It is pressing for this information.* It will do everything possible to find recruits to replace those officers for whom substitutes are required, but it is not practicable to send all the B1 recruits to the Navy. Many of these recruits are of graded specialist status, and they must be allocated in accordance with the needs of the Services for specialist officers.

Some Pointed Questions

SIR,—Does anyone *really* know what percentage of the medical profession is in favour of any form of Government-controlled health service for the nation? So far as I am aware, this question has never been asked of doctors in plain English in any questionary or material put out for discussion. If the profession really favours a State service then the minority must fall into line, but who can claim to know where opinion lies?

I submit that there is still time to ask: (1) (*a*) Are you in favour of a Government-controlled National Health Service? (*b*) Are you indifferent as to the outcome of present events? (*c*) Are you emphatically opposed to the Government proposals? (2) If you are opposed to any such procedure as that outlined in the White Paper, are you solemnly prepared to decline to operate such a service, provided that 70% of the profession gives a similar undertaking?

It is, of course, sheer nonsense to say that any Government proposal is inevitable, if the majority of the profession declares against it and possesses the "guts of a louse"! Could one imagine the Transport Workers' Union officials asking the members to discuss endless details of a scheme which would alter their whole future, without first having asked if the scheme is acceptable at all? How long would such officials last? And can anyone imagine the transport workers meekly saying, "Well, Bill, Parliament says we've got to do it, so of course we must"? I suggest that this is pure *Alice in Wonderland* stuff.

In plain English, it is just a question of guts and leadership. If the B.M.A. is to be accepted as our accredited representative, it must at least convince us that the profession desires the change. If not, well there is still just time for the installation of a "stroke" who will pull the crew together.—I am, etc.,

London, S.E.5. GUY BOUSFIELD.

Return to Practice of Refugee Doctors

SIR,—In view of disquieting rumours about the mortality rate among British Service medical personnel and British medical students working in former German concentration camps, such as Buchenwald, etc., would it be possible to publish the true figures of such casualties?

Further, I have heard it stated that very many Army and Air Force medical officers, who, on their group numbers, have high priority for demobilization, are likely to be retained for very considerable periods after their demobilization dates because of the pressure of civilian work in the liberated or enemy countries in Europe. If there is any truth in this would it not seem desirable that Central European and other refugee doctors, who now hold posts in this country, should be set free to return to Europe in order to relieve our own men and allow them to return home to their practices and hospital appointments? It would seem especially desirable since the refugee practitioners would be *au fait* with local conditions in their own countries and should be under no handicap because of language difficulties.—I am, etc.,

VICTOR RUSSELL,
Chairman,
S. Staffordshire Division,
Wolverhampton. B.M.A.

Purchase Price of Cars

SIR,—Many doctors now leaving the Services and returning to general practice are faced with the problem of providing themselves with a new car. At present their choice is understandably limited and the manufacturers' prices are considerably higher than pre-war. But in addition to this they have to pay purchase tax. It has been understood that purchase tax is designed to discourage spending on luxuries, but surely the doctor's car can in no wise be regarded as such.

This financial imposition comes at a time when doctors are leaving the Services in a not particularly prosperous financial state, especially having regard to the ungenerous gratuity granted them. Would it not be possible for Parliamentary representation to be made for the exemption from purchase tax of doctors who can show that a car is essential to their work?—I am, etc.,

"GROUP CAPTAIN."

*** The Secretary of the B.M.A. states: Strong representations have been made to the Treasury for removal of the purchase tax on cars bought by doctors.

Practitioners' Right of Appeal

SIR,—In the section relating to "Practitioners' Right of Appeal" in the proceedings of Council (*Supplement*, June 23) the report as published does indicate that the meaning of the resolution on this subject that was moved at the S.R.M. in May is incompletely understood. According to the report, Dr. Forbes is represented as saying that in the main there are two types of case that come to be considered—namely, technical breaches of the terms of service and imputed negligence—and that although he considered that appeal should lie from the latter, it should not do so from the former, which group contained many cases that were of a domestic character and which ought to be settled without recourse to the courts.

It does not seem to be recognized generally that there is no contract in existence between the doctor and the insured patient. The contract is between the insurance committee and the doctor. So that if a patient imputes negligence it is the committee which moves against the doctor, and if the case goes the full course the Minister, who, in the last resort, gives the final decision. But, in addition, the patient may well move against the doctor by exercising his common law right to do so through the courts. If he does and obtains a verdict, it is theoretically possible for the doctor on appeal to get such verdict reversed, and the paradoxical situation might then arise whereby the doctor is adjudged guilty by the Minister of an offence that he has been cleared of by the courts!

In regard to cases of a domestic character, most if not all should no doubt be dealt with apart from the courts, but nevertheless there can be decisions that leave a very real and rankling sense of injustice in the doctor, and it is the total negation of the "Rule of Law" that he should be denied appeal to it from a ministerial decision. The usual statement that injustice is not likely to happen does not obviate the possibility of its happening, and is one of the greatest jurisprudential fallacies recognized.

There can at least be no harm in obtaining for the practitioner his full rights of a citizen, and it would not be out of place for the B.M.A., as representing one of the liberal professions, to take a place in the van for an attack upon that most pernicious system of our times—legislation by delegation. The advice of the late Lord Hewart, probably the greatest upholder of the common law fights of the subject for over two centuries, is not lightly to be discarded: "It is a strong thing to give a Minister powers over the subject which are not reviewable by the courts of law."—I am, etc.,

Lincoln. S. WRAY.

Health Centres and the Scientific Method

SIR,—"Grouped [and separate] private practices are not concerned in any way with morbidity data" (Dr. Garvie, May 26, p. 97). Only too true. He might have added "and never will be" except in the rare instance of the statistical enthusiast like Dr. Garvie himself. One would therefore have expected him to welcome a national service that promises to make good this regrettable deficiency; but such is the power of human perversity that the very completeness of the service arouses his hostility. In pursuing his free researches he is constrained by prohibitive costs to devise statistical schemes that are presumably more restricted than he would have wished, and thereby triumphantly demonstrates his cherished freedom. Metaphysics has indeed much to answer for.

Digging in his own statistical patch afforded Dr. Garvie legitimate and well-deserved satisfaction, but essentially, wasn't he making the best of a bad job? He spurns an institution, presumably fully equipped, in which the co-operation of several colleagues, untroubled by fears of "advertising", potential business rivals, would enable him to indulge his particular bent on just such a scale as he would desire, to far greater purpose than he could hope for with his own unaided means, because he fears that health centres must inevitably be incompatible with freedom for research. But is it really inevitable? I note that a high proportion of original papers that have achieved recent publication in the *Journal* derive from State or quasi-State "slave" institutions. The Goodenough report may lay emphasis on the larger research. But this does not exclude the lesser; and in any case, in the course of implementation it is presumably as capable of emendation in this respect as it is in others. "Both schemes should be given a chance" (Dr. Garvie, p. 98). Why, therefore, ban health centres, which one infers from Dr. Garvie can be of service in one—and, in my humble submission, in both? It would be more consistent in Dr. Garvie to help in ensuring the desired degree of autonomy than to cut off his nose to spite his face by condemning outright the innocent, unborn, and still plastic centre.

And why this contempt for the long-suffering "cog"—an indispensable device that has rendered such immeasurable service to our civilization? And why the implied assumption that acting the passive "cog" in one regard excludes active responsibility in another? While the number of statistician-practitioners, scientifically trained and capable of making useful independent contributions, is likely to remain exceedingly small, I feel that very many actively responsible practitioners would be only too ready to assist as inexpert field workers. Such work would naturally hold little attraction for Dr. Garvie, but a recognition of its useful (even necessary) place in a total design would be more in keeping than the disdain of the expert. Cogs are not designed for their own sakes; and it is just possible that a human "cog" may experience gratification, and even interest, in his contribution to a common achievement.

I venture to suggest that much contemporary controversy is due to a confusion of terminology. The necessary periodic revision of our sociological vocabulary is sadly overdue. When "freedom for research" encounters "prohibitive cost" of desirable equipment, what is "free" and what is "bond"? The "tyrannous" machine has been known to effect a welcome release from "unfettered" drudgery. Dr. Garvie (like others) must surely realize that his choice lies not between "freedom" and "control" but between two controls—the one, blind, indiscriminate, and purposeless; the other, deliberate, planned, and purposive. Confusion is not freedom.—I am, etc.,

London, N.W.10. L. PHILLIPS.

Future of Radiotherapy

SIR,—At this time when the medical services of the country are under review and legislation is being prepared to govern their future, it is essential to make certain that proper guidance is given to those in authority on professional and technical matters. There appear to be three steps in the preparation of such guiding measures: first, the accurate assessment of the present position, which should be capable of definite tabulation; secondly, the estimation of future requirements and the shortcomings of the existing provisions, which can be approximately determined; and, thirdly, the formulation of concrete schemes on which to base future services. This last part must necessarily be the expression of personal opinions, however expert, and must be capable of amendment as varying views are forthcoming, but obviously the first step must be attained with unquestionable accuracy before the last two become possible. Attention is therefore directed to two or three semi-official publications which are now available and which must necessarily influence the opinions and possibly actions of those in authority.

The report of the survey carried out for the Ministry of Health on the hospital services for London and the Home Counties has just been published, and it will presumably be taken as the official basis for future organization. It contains a number of errors concerning radiotherapeutics which may or may not be vital, but which are nevertheless most unfortunate and suggest that other errors may also exist in other specialized sections. In Appendix 1 figures are given for the numbers of "radiologists" and "radiotherapists" on the staffs of various hospitals, which indicate that considerable confusion has occurred and give an entirely wrong picture of the type of specialist staff in those hospitals. For example, on page 83 St. Bartholomew's is credited with five visiting radiologists but no radiotherapists, in spite of the fact that one of the most well-known members of the specialty—Dr. Finzi—is on the staff. Further, on page 75 it is categorically stated that only the Middlesex, Lambeth, and Royal Cancer Hospitals carried out any appreciable amount of radiotherapy in London, entirely ignoring the very large and important radiotherapy departments at Bart's, Westminster, and University College Hospitals.

In the whole of London the statistics only show radiotherapists at Guy's, Westminster, and U.C.H. among the teaching hospitals, and at not one of the general or municipal hospitals, which produces the anomaly that at none of the three hospitals the report recognizes as carrying out serious radiotherapy is there any mention of the existence of a radiotherapist. In my own county, on the other hand, the two appointments at the Royal Sussex County Hospital are listed as "radiotherapists," when they are, in fact, radiologists doing both diagnostic and therapeutic duties, and the appointment at the Royal Alexandra Children's Hospital is also listed as "radiotherapist," while it is purely diagnostic, as should be obvious in such a special hospital.

It is easy to see how these errors have arisen through the completion of questionaries by lay hospital staffs and later perusal by surveyors not well versed in the practice of the specialties. It is also too easy to predict future legislation taking these errors as gospel, leading to disastrous changes in the special fields concerned.

The recommendations in Part 2 of the Survey show a strong resemblance to those already published by the Faculty of Radiologists and by the National Radium Commission, which is only natural as the surveyors have presumably largely accepted the views of these specialized organizations as they themselves are admittedly not expert in such matters. This inclusion of the views of the two unofficial bodies in this official report does, however, give them added weight, and it is necessary for a word of protest before it is too late, since these views are by no means universally held by radiotherapists, as was forcibly demonstrated at the meeting held recently at the instigation of the National Radium Commission to consider the "A B C Plan" for future cancer treatment. The published views of these two bodies, which are composed mainly of members of staffs of large hospitals and centres, not unnaturally are that all radiotherapy should be carried out in such large centres. However ideal these schemes may be, those of us who practise radiotherapy in the Provinces know only too well the many difficulties connected with them, and we are not ashamed of the results of our treatment carried out under what our senior colleagues would regard as unsatisfactory conditions.

This is not the place to enter into any detailed discussion on the future organization of radiotherapy, but the facts noted above are of general interest, and are written in the hope that they will encourage others to take more interest in the details of the preparations now being made for the future medical services of the country. It is not perhaps too much to hope that the errors pointed out here may be amended and that undue weight will not be given to individual expressions of opinion.—I am, etc.,

Hove. E. MILLINGTON.

Civilian Practice

SIR,—Nonsense is still being written about overworked doctors. The amount of work a doctor can do, apart from consultations and filling up forms, depends on the help he can find for his patient. Without nursing homes, nurses, maids, "non-queueing" neighbours he cannot look after anyone who must stay in bed. Thus the work of the G.P. is restricted and the hospitals overfilled. Until more attention is given to the home demobilized doctors will find their work confined to consultations, certificates, and single visits.—I am, etc.,

London, S.E.3. GUY NEELY.

Correction

Lieut.-Col. J. A. Balck-Foote points out that the last two words of the second sentence of his letter (July 14, p. 7) should be "free voting," not "free speech."

H.M. Forces Appointments

ROYAL NAVY

Surg. Cmdrs. A. H. Harkins, E. C. Davis, J. G. Holmes, O.B.E., and J. V. Williams to be Surg. Capts.

ROYAL NAVAL VOLUNTEER RESERVE

Surg. Lieut.-Cmdrs. D. M. Dean, V.D., J. C. Moor, V.D., P. B. Moroney, V.D., R. S. Rudland, V. S. Hughes-Davies, V.D., and F. E. D. Hallon to be Surg. Cmdrs.

ROYAL ARMY MEDICAL CORPS

Short Service Commissions.—War Subs. Capts. F. Zammit and F. T. Pullicino, from Emergency Commissions, have been granted Short Service Commissions in the rank of Lieut., and to be Capts.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

War Subs. Majors J. C. Anderson and H. Hall-Tomkin to be Majors.

War Subs. Capt. E. G. Murphy has relinquished his commission on account of disability, and has been granted the honorary rank of Capt.

Lieuts. (War Subs. Capts.) H. F. Whalley and C. R. Clayburn to be Capts.

Senior Training Corps.—Major R. B. Green, supernumerary for service with Durham University Senior Training Corps (Medical Unit) has resigned his commission.

TERRITORIAL ARMY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Capt. G. Chesney has relinquished his commission on account of disability, and has been granted the honorary rank of Major.

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

To be Lieuts.: T. B. Anderson, P. C. Barry, D. V. Bates, R. G. Chapman, D. M. Clement, G. N. Cooke, C. F. A. Cummins, R. C. Curran, A. F. Goode, I. G. Gray, W. H. Greenwood, H. T. Halper, P. J. Hare, E. J. Harries, A. D. Harris, F. G. J. Hayhoe, E. P. W. Helps, W. G. Henderson, M. I. A. Hunter, D. MacG. Jackson, B. D. Jacobson, N. H. James, W. C. Johnson, W. G. Keane, M. D. Keates, E. J. C. Kendall, W. H. Lillywhite, M. G. Lucas, P. McCulloch, V. F. Masters, D. M. Montgomery, H. G. Munro, N. I. Nash, R. W. Nash, H. Park, E. J. Parr, P. B. Philip-Smith, I. F. Pirie, I. Rees-Mathews, A. Q. Ritchie, D. C. Roberts, R. D. W. Schofield, H. L. Shimmin, J. D. Simpson, G. B. Smith, J. A. Smith, J. S. Smith, W. B. A. Smyth, J. D. Wilson, and E. A. Wright.

WOMEN'S FORCES

EMPLOYED WITH THE R.A.M.C.

The following M.O.s have been granted commissions in the rank of Lieut.: Ruth M. Haslam, Edith S. M. Merry, Rona Panting, and Agnes A. Brash.

ROYAL AIR FORCE

ROYAL AIR FORCE VOLUNTEER RESERVE

Squad. Ldr. (Temp.) C. F. Hamilton-Turner has been granted the rank of War Subs. Squad. Ldr.

WOMEN'S FORCES

EMPLOYED WITH THE MEDICAL BRANCH OF THE R.A.F.

Flying Officer M. I. Allen to be War Subs. Fl. Lieut.

INDIAN MEDICAL SERVICE

EMERGENCY COMMISSION

Major W. A. B. Reynard has relinquished his commission on account of ill-health, and has been granted the honorary rank of Major.

BRITISH MEDICAL ASSOCIATION

Election of Member of Council by South Wales and Monmouthshire Branch

The following is the result of the election of a Member of Council by the South Wales and Monmouthshire Branch:

W. V. Howells (Swansea) ..	163	*Elected*
G. W. Parry (Abergavenny)	86	
O. Williams (Llanelly) ..	63	
No. of voting papers issued ..	839	
No. returned	312	
Spoiled papers	2	

CHARLES HILL,
Secretary.

WEEKLY POSTGRADUATE DIARY

EDINBURGH POSTGRADUATE LECTURES.—At Edinburgh Royal Infirmary, *Thurs.*, 4.30 p.m., Dr. J. Norman Davidson: Nucleo-proteins in Growth and Development.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. for 18 words or less. Extra words 3s. 6d. for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.

BIRTHS

CHIPPINDALE.—On July 4, 1945, at Combined Military Hospital, Dehra Dun, India, to Ruth (*née* Stevenson), M.B., B.Ch., and Keith Chippindale, the Sikh Regiment, a son, Peter Douglas.

HOUSTON.—On July 10, 1945, at Richmond, Yorks, to the wife of Major J. M. Houston, R.A.M.C., a son, James.

JOHNSTON ABRAHAM.—On July 9, 1945, at the Middlesex Hospital, to Athalie (*née* Rowan), wife of Fl. Lieut. A. Johnston Abraham, a daughter—Deirdre Elizabeth.

JONES.—At Okehampton, Devon, to Marjorie and Gwynda Jones, the gift of a fifth child, Sally Mair.

McLETCHIE.—On July 14, 1945, at Glasgow, to Ann, wife of Major Norman McLetchie, R.A.M.C., India Command, a son.

METCALF.—On June 27, 1945, at University College Hospital, to Norah Metcalf, M.B., B.S. (*née* Lambe), wife of Lieut. Kenneth Metcalf, R.A.M.C. (S.E.A.C.), a son.

DEATH

CALEY.—On July 9, 1945, suddenly, Eric Stransom Caley, M.R.C.S., L.R.C.P. (St. Thomas's Hospital), aged 43, of Trees, Hoopern Avenue, Exeter, Devon, late Captain, R.A.M.C., dearly beloved husband of Jean. Cremated at Plymouth.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY AUGUST 4 1945

British Medical Association

ANNUAL REPRESENTATIVE MEETING, LONDON, 1945

The Annual Representative Meeting opened at the B.M.A. House, London, on Tuesday, July 24, and was continued on the two following days. It was presided over by Dr. PETER MACDONALD, with Dr. J. B. MILLER in the deputy chair, and they were supported by Mr. H. S. Souttar (President), Dr. H. Guy Dain (Chairman of Council), Dr. J. W. Bone (Treasurer), and the officials of the Association.

FIRST DAY

Tuesday, July 24

The meeting opened at 2 p.m.

Standing Orders

On a motion by Dr. D. H. S. BOYD (Reading) it was agreed that the standing orders should be amended so that motions by Divisions and Branches which called for reports on matters referred to Council should be placed on the agenda before approval was given to reports of Council.

Dr. A. C. DE B. HELME (Guildford) further moved that either the action taken on all motions and amendments referred to Council should be published with the Council's report or representatives should be informed of such action. He said the idea was that representatives should know before the meeting what had been done by the Council concerning the matters referred to it.

The CHAIRMAN OF COUNCIL (Dr. Dain) said that there was considerable misapprehension as to what the Council did with motions passed by the Representative Body. All such motions were considered carefully and the results of such consideration were to be found in the Annual Report. During the last twelve months a Representative Meeting had been called to consider the action of the Negotiating Committee, of which the Association was only a part, and motions had been passed to the Negotiating Committee for consideration, and if necessary for action, and no report had been made to the representatives. The reason for this absence of a report was, in the majority of cases, that this stage of the matter had not yet been reached by the Negotiating Committee: when it was reached a report would be made. Since the Special Representative Meeting there had been no opportunity to carry the negotiations any further, and so there were no further reports. It was not that the motions had been ignored.

Dr. HELME said that he was not suggesting for a moment that the Council neglected its business, but representatives did want to know what action had been taken on their motions, and, equally, if no action had been taken.

The Guildford amendment was carried.

Dr. C. M. SCOTT (Barnet) moved that a representative having a motion or amendment on the agenda should have the right to speak to, and demand a vote on, his motion, except when motions to pass to the next business or that the question be now put had been accepted by the Chairman and agreed to by a two-thirds majority. He was anxious that the position should not again arise whereby whole pages of motions were wiped out on a statement from the Chair that they had been already covered.

The CHAIRMAN pointed out that the result of this would be that the same subject-matter on similar motions would come up over and over again, and the time of the meeting would be occupied most unreasonably. Once the general principle had been determined it was surely in order to rule as covered such motions and amendments as were of the same tenor although of slightly different wording.

The CHAIRMAN OF COUNCIL said that it was the custom of the Representative Body to set out all motions on the agenda but to ask members in charge of specific motions to speak to the motion selected for putting to the meeting. He thought it a better procedure than the one followed by some other large bodies in which a committee decided what motions should be submitted, with the result that perhaps three-fourths of them never reached the agenda paper at all.

The amendment was lost.

PRELIMINARY BUSINESS

The CHAIRMAN OF COUNCIL (Dr. Guy Dain) moved the reception of the Annual Report of Council under "Preliminary" and the Supplementary Report under various headings. The work in connexion with the National Health Service, he said, had largely disturbed the ordinary procedure, and no doubt further special meetings would be necessary in the future to consider the progress of the negotiations, but he would like to call attention to the amount of other business which had been carried on. Within the last week the membership had passed the 50,000 mark. (Applause.) An effort was being made to establish relations with the medical associations of countries on the Continent, and it was hoped to set up an international body analogous to the International Labour Office, but to deal with medical questions, when conditions became more stable. A number of experts in different fields of health had come together and produced a very useful book, *A Charter for Health*, which would be ready for publication, it was hoped, in September. So much emphasis had been placed recently on organization and administration that people might lose sight of the fact that health did not depend primarily upon medicine or medical organization, but that good wages, good surroundings, fresh air, good food, and recreation were all essential to health before the doctor ever came in.

The General Practice Committee had done much to improve rates and conditions for doctors doing all kinds of general practice work for Government Departments. The General Practice Committee and the Insurance Acts Committee had produced evidence to put before the Spens Committee, which was dealing with the range of income of general practitioners. The Public Health Committee had asked for a revision of the Askwith scale, which regulated the salaries of medical officers of health. The Ophthalmic Group had produced a report on the Eye Service which was an example of what could be done in that way. The Journal Committee was dealing with the starting of new scientific journals, covering various fields of medicine.

The Council was taking up the question of the efficiency of medical auxiliaries. It was to be hoped that the Government would recognize that such a body as the Board of Registration of Medical Auxiliaries was essential to secure the competence of the various auxiliary services.

Election of President

It was agreed with acclamation that Mr. H. S. Souttar be elected President of the Association.

Representation of Services on Council

Major-General R. W. D. Leslie and Air Marshal Sir Victor Richardson were elected to the Council to represent respectively the R.A.M.C. and the medical branch of the R.A.F.

The General Practitioner and Medical Education

Dr. W. D. STEEL (Worcester) moved as a rider to the preliminary part of the Report:

> That the Medical Education Committee be asked to investigate the part which general practitioners can take in the medical education of the prospective general practitioner.

General practice, he said, was brushed aside in the Goodenough report with only two or three references, but demanded better treatment. At present it was not necessary for a specialist to have taken part, even for a short time, in general practice, although a little experience of general practice would make him a better specialist. No part of the syllabus of instruction dealt with the work of the general practitioner, but it would be of tremendous advantage if medical students could have some instruction from a general practitioner of experience. There should be an opportunity for such general practitioners to take part in medical education.

The CHAIRMAN OF COUNCIL asked that the motion be referred to Council, who would then put it before the appropriate committee. Dr. Steel assented to this course, which was agreed.

"A Charter of Health"

Dr. VAUGHAN JONES (Leeds) moved:

> That the Council be requested to have prepared and published a concise pamphlet on health which would be available to the general public at a small charge.

The *Charter of Health*, he said, was to be published at 5s., which would limit its appeal.

The CHAIRMAN OF COUNCIL said the Charter of Health Committee started out to do exactly what was suggested, but found that if the book was shortened further it became simply a series of platitudes. The Council, however, would look into the matter again if the Representative Body so desired.

Dr. R. G. GORDON (Bath) agreed that a shortened form of the book would be almost meaningless, but added that it had been possible to come to a satisfactory agreement with the publishers on royalties, by which the Association, which would not want to make a profit on the book, would take free copies instead, and would distribute them widely as propaganda. That would be better than trying to emasculate the document.

Dr. VAUGHAN JONES, while paying a tribute to the excellence of the *Charter*, maintained that it was written for a limited section of the public. An entirely different document was wanted, and, if the present committee were unwilling to do the work, another committee could be set up for the purpose.

The motion was carried by 76 votes to 69.

International Relations

Dr. G. DE SWIET (Paddington) moved:

> That the Council be asked to approach the appropriate Government Departments and members of the newly elected House of Commons with a request for an early recognition of the medical profession as being entitled to diplomatic representation (like other national interests) through health attachés or counsellors at British embassies and legations in foreign countries, which is now considerably overdue.

He had, he said, advocated the setting up of a health department in the Diplomatic Service for many years, in spite of the existence of the Health Section of the League of Nations. With the disappearance of that body, the need was more apparent and pressing than ever. The members of the International Relations Committee had approved the idea in principle. Diplomatic recognition would help the medical profession to recapture the status which it possessed in bygone days, when every court had a court physician, but air attachés and press attachés were unheard of. If more doctors were admitted to the diplomatic services of the world, the results of diplomacy would be better than they were to-day.

The CHAIRMAN OF COUNCIL expressed the hope that the motion would be referred to Council so that the position could be explored. He was completely ignorant of the amount of detail which the motion would entail, but would undertake to explore the ground. Council should not be tied to taking action if it found action undesirable.

Dr. de Swiet agreed to the course suggested, and the motion was referred to Council accordingly.

Board of Registration of Medical Auxiliaries

Dr. F. A. ROPER (Exeter) moved that the Government be pressed to establish proper bodies for the regulation of standards of entry to and registration of members of medical auxiliaries' organizations. The motion was not, he explained, intended as criticism of what had so far been done with the backing of the Association; the object was to establish standards approved by the profession for those who should be recognized as possessing sufficient qualifications in their particular branches. The Board of Registration was doing excellent work of a pioneer kind, but, now that the expansion of the medical services as a whole was contemplated, the Council should go much further than merely expressing a view and should press the Government to consider the desirability of enacting statutory standards. The work of the Board of Registration would provide an effective foundation for the subsequent structure.

Whether one board would be sufficient for all the auxiliary medical services was debatable. The physiotherapists had indicated that they thought not, and had seceded to secure a position of independence, and were now under no control, voluntary or statutory, though their chairman had stated that State registration of physiotherapists was bound to come before long. The time had come to approach the Government with, if possible, the full collaboration of all the bodies involved, and indicate the reasons why Government action should not be further delayed. A Government commission of inquiry seemed justified.

Mr. ZACHARY COPE (Council) said it was unwise to press the Government to form new bodies when there was already a body in existence—the Board of Registration, which was doing the work well. It was not true that all the physiotherapists had withdrawn; out of the 8,000 who were on the register 6,000 still remained and were not willing to follow the lead of their council. Medical men had a majority of one on the Council of the Board, and, while some medical auxiliaries resented that fact, it was most important to have such a majority to uphold the standards and ensure close working with the medical profession.

The motion was lost.

Public Relations

Dr. J. A. GORSKY (Westminster and Holborn) moved:

> That the Representative Body considers the work of the Public Relations Adviser should be pressed with more vigour, in view of the unsympathetic attitude of the Press.

The motion, he said, was not intended as a reflection on the public relations work of the Association, but there should be greater liaison between the Association and the Press. Personally, he did not regard the attitude of the Press as unsympathetic, but rather as uninformed. He would like to see an extension of the public relations conferences which had been held in London and Leeds, and a liaison committee of members of the Press and of the Association to give the Press the views of doctors on the National Health Service.

The CHAIRMAN OF COUNCIL said that each Division in the Home Counties had been invited to send its public relations' secretary or some other official to a meeting which was addressed by distinguished representatives of the Press, and similar action had been taken in the case of the meeting held in Leeds. He did not agree that the attitude of the Press had been unsympathetic; apart from three or four prominent newspapers, the Press had put the point of view of the Association fairly. It was only recently that the medical profession had come to realize that private relations with their patients were not enough, and that they must have public relations. The vigour of the Association's Public Relations Adviser was all that could be desired, and his advice was excellent and his contacts enormous.

The motion was withdrawn.

Dr. I. D. GRANT (Glasgow) asked what arrangements had been made for showing the film *The Family Doctor*.

The CHAIRMAN OF COUNCIL replied that the matter was in the hands of the Public Relations Adviser, who reported that it had already been shown to one distributing company and to the British Council. Film distributing companies gave priority to entertainment over instructional films, but everything possible was being done to secure the showing of the film. He hoped that members who had influence with film magnates would use it.

GENERAL PRACTICE

Certification

Dr. S. WAND (chairman, General Practice Committee) moved as a recommendation of Council to rescind a resolution of the 1944 Annual Representative Meeting, namely:

> That the policy of this Association be to lessen the burden of certificates, and, with this end in view, when a medical certificate is compulsory, to place the responsibility for payment on the authority demanding the certificate.

If that resolution stood, he said, general practitioners would have to render accounts to large numbers of different firms. It seemed to him like an accountancy nightmare.

Dr. DOUGLAS BOYD (Belfast) said the original resolution came from Belfast, and its object had been to open a discussion on the whole question of certification; it was realized that it could not be applied on every occasion. The time had come to consider the whole question of certification, because on it would hinge the success or failure of a national health service. On many occasions an authority demanded a certificate simply to protect its own interests, and it should not do so at the expense of the patient and by overburdening the practitioner. The wording might be altered to: "Where an authority makes a certificate compulsory, it should be responsible for the payment, except in such instances where it interferes with the ethical relationship."

Dr. A. MORRISON (Darlington) opposed the rescinding of the resolution, which represented, he contended, one way in which certification could be cut down. The recipient of the certificate could still pay the doctor, but the cost should be refunded to him by his firm.

Mr. A. STAVELEY GOUGH (Council) maintained that it was better for the doctor to receive the money from the patient, and not have to render accounts to employers for certificates. It would not cut down certification to make the employer pay. If the employers ought to pay, it was for the employees to see that they did, and certain trade unions were already taking the matter up.

It was agreed that the resolution be rescinded.

Dr. W. B. A. Lewis (Shropshire and Mid-Wales) asked the meeting to express the view that there should be no payment for certificates by the patient or employer, but that, in the future planning, payment for all certificates should be included in the capitation fee. The practice of charging insured persons for certificates, he said, was meant as a deterrent, but had failed in its object. It was not fair to make an insured person pay for a certificate demanded of him, and it was not fair or practicable to charge the employer. It was improbable that the practice of charging the patient would be continued when the new Act came into force. It was both right and expedient to put an end to a state of affairs which reflected little credit on the medical profession.

Dr. R. W. Cockshut (Hendon) held that it would be impossible to include payment for certificates in the capitation fee, because the demand varied so much in different parts of the country. It was not in the interests of the country that people should expect to get everything from the State, and those who wanted certificates should pay for them; otherwise the burden would greatly increase. Dr. C. M. Stevenson (Council) said the motion might easily multiply the burden sixfold. Dr. E. C. Dawson (Derby) regarded the motion as impracticable, in view of the fact that the number of certificates demanded by patients varied immensely, and some certificates involved answering a large number of questions. Dr. J. Hallam (Stoke-on-Trent) pointed out that a considerable sum of money was involved, and there was no reason to deprive practitioners of part of their income. If doctors agreed to give certificates without a token payment they would not obtain an increase in the capitation fee.

The motion was lost.

Dr. A. S. Wigfield (East Herts) moved that the question of certification in general should be reviewed at the earliest possible moment, and that the use of one certificate should suffice for visual demonstration to minor authorities. The Association must make up its mind about the matter, he urged, before it was reviewed in connexion with the National Health Service. Dr. S. Wand, opposing the resolution, said the general practitioner must decide for himself which kind of certificate he should use, apart from the statutory forms under the National Health Insurance Acts. Dr. Warner (Cleveland) said that in the North practitioners felt strongly on the question of certification. There should be one form of certificate, and he suggested that the form of certificate given under the National Health Insurance Acts should be used in every case. That could be done, and had been done to a minor degree in the North.

Dr. Wigfield pointed out that the passing of the motion would involve no compulsion to use a particular form of certificate.

The motion was lost.

Dr. J. A. Gorsky (Westminster and Holborn) moved that in view of the fact that the Ministry of Pensions had agreed that a fee of 5s. should be payable by the Ministry for the completion of the form issued by them concerning the previous medical history of an applicant for a pension, such form should state that that fee was so payable and give the name of the officer of the Ministry to whom application should be made if the fee was not duly paid.

Dr. Wand explained that originally there was a form which the doctor was required to fill up and for which he received a fee from the patient, the patient in certain circumstances recovering the fee from the Ministry. The Association represented that that was wrong, and so a new form was devised, and when the Ministry wanted information from a man's panel doctor they sent him the form with a fee of 5s. There were also, however, men whose application for a pension had been turned down and who were given papers to enable them to state their case on appeal to the tribunal, and on one of those papers the man was invited to get information from his pre-enlistment doctor. If the tribunal were satisfied that the appeal was made on substantial grounds, they could reimburse the man for any fee up to £2 for which he had made himself responsible. The Ministry insisted on this machinery, as public money was involved.

The motion was lost.

Capitation Fee for Ex-regular Firemen

Dr. Wand hoped it would be agreed that a fairly satisfactory settlement had been obtained in the matter of the capitation fee for ex-regular firemen.

Dr. W. N. Maple (Brighton) moved that the arrangement be not ratified, on the grounds that it was an unsatisfactory method of payment and involved the principle of unlimited liability to service on the part of the doctor with limited liability of payment by the employing party, which was quite different from the principle of the capitation fee.

Dr. Wand said that the General Practice Committee would not object to the reference back of the particular section referred to, as it was an arrangement at present existing with the Post Office, and it would strengthen the Committee's hands in further representations. He hoped, however, that the amendment would be withdrawn.

The amendment was withdrawn.

Occasional Treatment of Service Personnel and Italian Prisoners of War

Dr. Wand referred to Form O1667, on which application was made for payment for treatment of Service men and women, and which had been extended for use with Italian prisoners of war, and said that as a result of representations the amounts payable had been increased to the following: attendance at surgery, 4s.; day visit to patient, up to two miles, 6s.; night ditto, 10s.; distance fee, for day or night visit to patient, for each additional mile over two, in one direction only, 9d.; fee for medical certificates, 1s. An allowance was to be made for specially expensive drugs, and negotiations were proceeding on the interpretation of what was a night call.

Post-war Financial Aid

Dr. R. Forbes (Hendon) moved:

> That while welcoming the Report of the Council on a scheme to enable doctors without capital to purchase and establish themselves in a civilian practice on their demobilization the Representative Body is nevertheless of the opinion that special arrangements should be made to inform medical officers of the facilities that the Association is able to sponsor and to interview and advise demobilized officers on the various professional and business difficulties peculiar to the acquisition of a civilian practice.

It was desirable, he said, that the arrangements made by the Association should be brought to the notice of those concerned. Many newly qualified men had gone into the Services, and would be returning with little or no idea of the difficulties of acquiring a partnership or practice. Other organizations had set up resettlement bureaux, and the Association should do something on those lines. Many practitioners would return to find their houses requisitioned and that their practices had diminished or largely disappeared; others might fall into the hands of those who were pushing the sale of single-handed practices, exaggerating their receipts and leading men to assume liabilities they would be unable to discharge.

Dr. R. G. Gordon (Bath) maintained that the whole future of the Association might depend on the degree to which returning practitioners were convinced that it was looking after their interests. Among officers who had already started in practice there was grave fear of the future. In many instances the protection of practices arrangements had not worked well, and their practices had melted away. They had been out of touch with clinical medicine for some time, and did not consider a fortnight's refresher course adequate. They saw no way of tiding over the interval between their return and their rehabilitation in their practice. He therefore supported the idea of a central bureau to give advice, though it would require the numerical strengthening of the headquarters staff. Consideration should be given not only to loans for the purchase of practices but to loans for those who needed longer postgraduate instruction, and to tide them over the period of rehabilitation.

Dr. Wand pointed out that what was asked for was already being done, and had been done for a long time past.

Dr. J. A. Brown (Birmingham) said there had been an improvement in the arrangements for those who wanted to buy a practice as compared with the position before the war, when the rate of interest was about 5½%. As a result of the Association's negotiations, the returning practitioner would be able to borrow at 4%, unless the bank rate rose above 3½%, and would be able to borrow the whole of the capital required to purchase, provided the practice was approved and he took out an insurance. Repayments could be spread over a term of ten or fifteen years, and the arrangements were elastic.

Dr. Forbes, in reply, said that he had particularly avoided making any criticism of what had been done to afford assistance and advice to officers returning from service. What Hendon hoped was that greater point and arrangement could be given to the tendering of such advice and that something on a wider scale might be established within the organization, so that these men would look to the Association primarily for help and assistance.

The Hendon motion was carried.

Dr. N. Stevens (West Suffolk) moved:

> That the Association considers the creation of a fund to be used for the guarantee of loans to medical men wishing to purchase practices and thus enable them to borrow at a lower rate of interest than would otherwise be possible.

He said this was a practical proposal to help returning practitioners. There was a fund [the N.H.I. Defence Trust] which could be made available for guarantee purposes, so that money could be borrowed at a very much lower rate of interest. It was not for him to say which fund should be so used, but it would serve a useful purpose and the Association would be able fully to investigate practices put up for purchase. The whole future of the Association might be affected by this; some political party might start a service of its own, using the young medical practitioner returning from the Services who had not the money to buy a practice. Candidates in the recent Election had said that a State-salaried service was the answer for returned men. If the Association did not deal with this with great determination it would regret it.

Dr. D. C. **Barron** (Sheffield) supported the West Suffolk motion because his Division felt that more should be done for the returning men, and would go so far as to press for the Association to find the money to set them up. If the Association used a fund of £250,000 to guarantee the loans—not to lend the money—it could be a guarantor up to £1,000,000, and the very nature of the guarantor would induce lenders to advance money at much lower rates of interest than had already been mentioned.

Dr. **Wand** said he felt sympathy with the idea and had thought it was the solution of the problem of post-war settlement of practitioners, but that problem had been solved to a very large extent by what had been called a rather nebulous scheme. People were getting loans from the bank under these terms. What was the guarantee fund proposing to do? If a man bought a practice at £3,000 he would pay £120 per annum as a maximum for interest, which would be reduced as the years went by. At present it was halved by tax. He had estimated that the amount of money which might be turned over in the sale and purchase of practices during the next 7 or 8 years would be in the region of £10,000,000 to £15,000,000. Where were they to start? There was no need for a guarantee; the bank was lending money without guarantee to individual men. If the interest was reduced by 1% it would save the borrower £15 on the greatest expense year; on the average throughout the term it would cost him £7 10s. per year less. It was not the interest which was the problem, it was the capital repayment, and by extending the term and introducing the element of life insurance the burden had been lessened considerably. The small saving to the individual would not make it worth while at this stage. The Relief Fund might help a man who had fallen on bad times to pay his interest, but the Defence Trust was created for another purpose and could not be used in this manner. The problem had so nearly been solved that no useful purpose would be served by making a guarantee fund under these conditions.

Dr. **Stevens** disagreed that the guarantee fund would be useless because it was too small, for not everyone buying a practice would need a loan. The creation of such a fund would be a gesture towards helping these men and would make them feel that there was something substantial behind these proposals.

The motion was lost.

Dr. **Stevens** then moved that an appeal be made to all medical men throughout the country for generous payments to the Medical War Relief Fund in order to enable that fund to assist young medical men returning from the Services and wishing to start in practice.

Dr. J. W. **Bone** (Hon. Treasurer) pointed out that the Medical War Relief Fund was not a B.M.A. Fund but a joint fund between the Association, the three Royal Colleges, and the Royal Medical Benevolent Fund, and its terms of reference were very definite: "To give temporary assistance to medical practitioners and their dependants who find themselves in financial straits as a direct result of war conditions." This fund, which was one of the most useful with which he had ever been associated, had received £51,000 and had a balance of £31,000. An appeal was shortly to be issued in view of the fact that men were coming back and trying to re-establish themselves. It particularly met the needs of widows and orphans, and of doctors who were in difficulties, but there was another object. Men very often left their practices in debt and also had heavy commitments of various kinds, and they came back so overburdened with debt that there was no prospect of their regaining financial stability. Quite a number of such cases had been helped. He would suggest by way of amendment that the motion should finish at the word "Fund."

Dr. **Stevens** accepted Dr. Bone's suggestion and the motion was carried in this form without dissent, as an appeal for generous payments to the Medical War Relief Fund.

Fees for Medical Witnesses

Dr. G. W. **Taylor** (Leicester and Rutland) moved that in reopening discussion with the Home Office with a view to securing a new scale of fees for medical witnesses in both civil and criminal cases, methods of payment should also be reviewed in order to avoid waste of time of medical witnesses.

Dr. **Wand** accepted the motion on behalf of the General Practice Committee and it was agreed to by the meeting.

Doctors' Cars

Dr. J. A. **Gorsky** (Westminster and Holborn) moved:

> That the meeting considers that in view of the price of new cars the supply of second-hand reconditioned cars should be augmented.

He said that some time ago it was stated that reconditioned cars would be available to the profession on priority at about two-thirds pre-war price without purchase tax. It was now stated that these cars were in short supply; in fact a member had been informed by the Ministry of War Transport that there were only about four such cars available per week in London. Purchase tax was a luxury tax, and the Association should call for an abolition of the tax on new cars for doctors. As the price of new cars was so high the Association should press for an increased allocation of reconditioned Service cars.

Mr. **Lawrence Abel** (Marylebone) moved as an addition (which was seconded by Mr. Dickson Wright) that "those who sold their cars for Government work should be offered a similar ex-Service car at a price comparable to the price received."

Dr. **Wand** said that Dr. Potter and he went to the Ministry some months ago in order to seek to obtain full priorities on reconditioned cars and to press for an adequate supply of new cars to doctors. The Ministry had stated that 20,000 written applications had been received for reconditioned cars—a number not including a large number of inquiries either in person or by telephone. During the period the number of surplus cars placed at the Ministry's disposal was 170. It was also stated that prior to the Minister's most recent statement nearly every one of those reconditioned cars was allocated to a doctor or to an M.P. With regard to the rumour that there were a large number of cars which could easily be reconditioned the Minister said that the majority of the cars in the dumps were denuded of spare parts to make existing Service vehicles serviceable and therefore were quite unsuitable for reconditioning. The General Practice Committee and the office would take every opportunity of making representations to the Ministry that reconditioned cars should be available to the profession. The committee, while not accepting the exact wording of the motion, would accept the principle and the amendment by Mr. Lawrence Abel.

In reply to a question whether "priority in spare parts" meant anything, Dr. Wand said that in theory it meant a lot; in practice it did not mean anything. The supply of certain parts was very short. The Ministry gave an unqualified assurance that every case brought to its notice would be investigated and everything possible done to get the part. He understood that they had done so, but in some cases the parts were just not there.

Dr. **Gorsky**, in reply, asked why information was not obtained from the Ministry of War Transport as to the limited number of reconditioned cars available.

The motion as amended was carried.

Dr. **Kate Harrower** (Glasgow) moved:

> That steps be taken to facilitate priorities in respect of doctors' cars and for the abolition of purchase tax in connexion with same.

The first part of the motion was carried unanimously.

Dr. **Wand** said, with regard to the second part, that steps were taken by the office to get purchase tax removed from doctors' cars several weeks ago. With regard to priorities, of the first batch of licences issued by one firm 65% were received by doctors and 15% by M.P.s.

Dr. J. A. **Ireland** (Council) said that because of shortage of transport new cars intended for export were accumulating in this country, and he suggested that doctors should be given priority over the export trade in respect of cars.

The second part of the motion was also carried.

The General Medical Council

Dr. R. **Forbes** (Hendon) asked the meeting to express the firm opinion that the time was ripe for the Council to press for the amendment of the Medical Acts to secure an increased and adequate representation of the profession by direct representatives. He said that the G.M.C. consisted of 39 persons, and there were 7 direct representatives—a very small proportion to sit on a body which touched the medical profession at so many points. The Council was known to be considering amendments of the Medical Acts, and if amendment was taking place at all surely it was an appropriate time for the Association to join in and ask for an enlarged representation duly elected by the rank and file of the profession. The

Council might on counts of negligence or of conviction for various offences erase the name of a medical practitioner from the *Register*, and by so doing interfere temporarily or permanently with his livelihood. Those familiar with the difficulties and dangers of medical practice were more likely to be the appropriate people to judge the alleged errors and faults of others than those who had spent the greater part of their lives in the cloisters of universities.

Dr. N. E. WATERFIELD moved to widen the motion so that it called for a review of the composition, functions, and procedure of the General Medical Council, and Dr. Forbes accepted this amendment.

Mr. LAWRENCE ABEL (Marylebone) moved a further amendment that the number of direct representatives be increased by 100%.

Dr. J. W. BONE, one of the direct representatives, said that the Council consisted of 42 members, though three sat only for dental business. The bulk of the members were appointed by the Privy Council and by the examining bodies. There was at present only one lay member—namely, Lord Hacking, appointed by the Privy Council. The main business of the Council was medical education and the maintenance of the *Register*. The seven direct representatives had during the years steadily advanced from strength to strength, their advice was sought and welcomed, and they took a principal part in the debates on penal procedure. He did not quite see what was to be gained by increasing the representation to 14, though some small increase might be desirable.

The CHAIRMAN OF COUNCIL, also one of the direct representatives, said that the Medical Acts were now under reconsideration, and this was an appropriate time for the Association to give attention to the subject. He thought that the Association Council might be asked to set up a committee to consider the composition and duties of the General Medical Council and to report to the Representative Body. He desired to say, however, that the members of the Council appointed by the universities were not "dusty old professors," as one speaker had called them, but men thoroughly acquainted with the needs of medical education, and under the vigilance of the Council the standard of education was well maintained. He had never known a body on which changes of personnel were so frequent, and during his own ten years or so of membership the personnel of the Council had very largely changed.

The amendment moved by Mr. Abel, to press for the doubling of the number of direct representatives, was met by the carrying of the previous question, and Dr. Forbes's original motion, as amended by Dr. Waterfield, was carried in the following form:

> That the Representative Body is firmly of opinion that the time is now ripe for the Council to review the working of the Medical Acts with special reference to the composition, functions, and procedure of the General Medical Council.

Dr. FORBES said that he had rather gathered that Dr. Bone thought that general practitioners, unlike academic men, had nothing to contribute to medical education. Yet one of the finest pieces of criticism of medical education emanated from the Association, the work of a committee of which the late Sir Henry Brackenbury, a general practitioner, was chairman.

Local Advisory Committees on Industrial Health

Dr. C. S. O'FLYNN (Sheffield) moved that local advisory committees on industrial health representing doctors, employers, and employees should be appointed in suitable industrial areas. He said that some months ago he attended a joint conference of such bodies, and was impressed by the amount of approval they received from all quarters. But he thought they should not be allowed to grow up piecemeal throughout the country without any set plan.

Dr. E. C. DAWSON (Derby) moved an amendment to instruct the Council to promote the formation of local advisory committees on industrial health. It was merely an improvement in wording on the Sheffield motion. There was such a committee in Derby which had been working for eighteen months, and local opinion was that it had been a great success.

Dr. C. M. STEVENSON (Council), supported the amendment. The original motion restricted the movement to industrial areas, but these committees were wanted particularly among farming communities.

The amendment was carried.

The meeting adjourned at 6 p.m.

SECOND DAY

Wednesday, July 25

The meeting was resumed at 10 a.m., under the chairmanship of Dr. Peter Macdonald.

Supplementary Clothing Coupons

Dr. S. WRAY (Lincoln) moved that the Board of Trade be pressed for the provision of supplementary clothing coupons for all medical practitioners and dispensers, to cover the purchase of such items as gowns, coats, and overalls.

Dr. S. WAND (chairman of the General Practice Committee) said that representations were made to the Board of Trade about six months ago. Inquiries showed that people whose clothes were less likely to be damaged than those of doctors and dispensers were in fact getting supplementary coupons. For example, works chemists who were putting in over 20 hours a week in the laboratory were entitled to them. The reply received from the Board was disappointing. It stated that the Board had considered the case sympathetically, but was unable to make any concession at present. Doctors could not be put in the special category without including others such as dentists, retail dispensers, hairdressers, and masseurs. But it was added that there was every intention of reconsidering the position as soon as there was a slight improvement. This attitude was a most unreasonable one. It was typical of the pinpricks which the profession had had to put up with during the war. The most appalling difficulties had been put in their way by some Government Departments—as, for example, in the matter of domestic help. It was the most mean and miserable attitude that could be taken up by a Government Department towards a section of the community which was doing a job of the highest priority. (Applause.)

The motion was carried.

Night Calls

Dr. ELSIE WARREN (Kensington) moved that wherever practicable a night call should be deemed to be one made between 9 p.m. and 9 a.m. The best definition of night calls was given by the London Insurance Committee in their form (MC2) revised in 1939.

Dr. H. M. GOLDING (Bristol) moved an amendment. It was admitted that doctors were on duty 24 hours a day, but that did not mean that their normal working day was 24 hours. The motion of Kensington might suggest that the normal working day was 12 hours. He wanted the motion amended to read "between 6 p.m. and 9 a.m.," suggesting that the working day was 9 hours.

Dr. WAND was sympathetic, but a little disturbed about the hour of 6 p.m. It would be necessary to negotiate for different fees for a night call. He thought there should be a graduated scale—a late fee scale—and the better way would be to make the night call time begin at 8 p.m. Dr. J. A. IRELAND seconded. Night calls from the practitioner's point of view could not be considered as beginning from 6 p.m. A double fee could not reasonably be charged between 6 p.m. and 8 or 9 p.m.

It was agreed that the time should be between 8 p.m. and 9 a.m.

NATIONAL HEALTH INSURANCE

Dr. E. A. GREGG introduced the report under this heading.

A representative complained of paragraph 21 in the Annual Report of Council with its reference to "what ought to be the range of total professional income of a registered medical practitioner." He could not see how anyone should lay down what a practitioner "ought" to earn. Dr. GREGG pointed out that this was the reference of the Spens Committee; it was not an Association phrase.

Sickness Benefit in Pregnancy

Dr. D. S. ROBERTSON (Edinburgh) moved to omit the reference in paragraph 22 of the Annual Report concerning the obtaining of independent medical opinion and examination of a pregnant woman. There were three possible reasons why such an independent examination should be made. One was that the pregnancy was abnormal, in which case the examination would be much better made in hospital. Another was that examination was necessary because the question of pregnancy was in doubt. But the diagnosis of pregnancy at the 32nd or 34th week was not one calling for great clinical acumen; the average general practitioner was quite capable of diagnosing pregnancy at that stage, and independent examination was therefore quite unnecessary. The only other possible reason was that laxity of certification was suspected. The patient herself also should be considered. What would she think of a strange doctor making an unwarrantable intrusion on her privacy?

Dr. GREGG said that Dr. Robertson was under a misapprehension. The Association had taken up a certain position where the practitioner had made a reference to the Regional Medical Service in connexion with certification of incapacity. They believed that no woman should be asked to come up for examination within eight weeks of the expected date of delivery, and that any such independent examination should be conducted at home. The Ministry had given an assurance that in those cases in which the doctor stated that the patient by reason of her condition was unfit to go for examination, or that it was undesirable she should go; the statement would be accepted without question. If anyone had the right to insist that in such cases an examination should be made, it should be carried out in the woman's home, and she should not be asked to travel. That was all there was in it.

Dr. Robertson said that that proved his point, that the paragraph was not clear. In an uncomplicated pregnancy there was no need for the latter part of the paragraph.

The Edinburgh proposal that the words be omitted was lost.

References to Regional Medical Service

Dr. E. A. Gregg referred to a matter which he said was likely to assume considerable importance in the near future. At present, when a reference was made to the Regional Medical Service on the question of fitness for work, the examining officer, after seeing the patient, filled in a report for the Ministry and sent a report to the doctor concerned to say whether he agreed or disagreed with him. In cases of tuberculosis, the Ministry now wished to take the matter outside the range of incapacity for work and determine through their examining officer whether the patient should be referred to a consultant. The Regional Medical Officer would refer the patient to a consultant without asking for the opinion of the patient's own doctor, and after getting the report from the consultant would send it to the doctor.

The strongest exception should be taken to that. There might be a few occasions when an individual practitioner had been slack, and when it might appear that a patient was referred to the Regional Medical Officer without proper steps having been taken to have his condition investigated; but the correct way of dealing with that would be for the Regional Medical Officer to say, in his report to the doctor, that in his opinion it would be wise to ask the local tuberculosis officer to see the patient or to have further pathological or bacteriological investigations done. The matter was being taken up with the Ministry, and it would strengthen their hands to have the support of the Representative Body.

Dr. J. A. Brown (Council) pointed out that a promise had been given that nothing would be done in the new service to interfere with the doctor-patient relationship, yet this was an attempt to graft something on to an old service which materially affected that relationship. It was the thin end of the wedge of bureaucratic control. The Association wanted everything possible done for the patient, but would not tolerate interference by officials of the Ministry in the doctor-patient relationship. Dr. N. E. Waterfield said it should be for the doctor in charge of the case to call in a consultant and receive his report. What the Ministry proposed was a distinct breach of the ethical rules, and the Ethical Committee supported the protest against it. Dr. W. Jope (Lanarkshire) expressed the hope that nothing would be done to interfere with the very good relations which existed in Scotland between general practitioners and the Regional Medical Service. In Scotland, for many years the R.M.O. had, with the approval of the general practitioners, used the services of consultants to assist him in diagnosis, up to the point of estimation of capacity for work only.

The meeting indicated by a show of hands its general agreement with the statement made by Dr. Gregg, and the report under "National Health Insurance" was approved.

SPECIAL PRACTICE

A National Eye Service

Prof. A. W. Burgess (Chairman of the Special Practice Committee) moved, as a recommendation of Council, that the Representative Body approves the scheme for a National Eye Service (set out as an appendix to the Annual Report of Council, *Supplement*, May 12), and gave a brief outline of the scheme there set forth.

Dr. C. M. Stevenson (Cambridge) pointed out that the specialty in question was one which was very difficult to organize. It was almost the only one which was in violent competition with a non-medically-qualified body of people who had a powerful vested interest, and was divided into two groups: the ophthalmic surgeons proper, and the ophthalmic medical practitioners who did not do major surgery. At the present time there were not enough ophthalmically qualified doctors to do all the refraction work, and therefore the technicians could not be squeezed out. The prescribing optician was in a very strong position, politically and otherwise, and a good many doctors supported him and did not support the ophthalmic surgeon. A difficult position would arise when the implementation of the scheme came to be considered by Parliament.

Dr. Lucas Young (Eastbourne) said the scheme had been considered by regional meetings all over the country. At some of them exception had been taken to parts of it which were thought to suggest that the services of sight-testing opticians should be utilized by medical practitioners, but that had been ruled out by subsequent amendments. Personally, he would like to see the word "optician" deleted from the scheme entirely, and, where not used in the sense of "dispensing optician," replaced by "refractionist." There might be a school of refractionists, just as there was a school of orthoptists, to produce qualified medical auxiliaries. It had been suggested that it would be impossible for the ophthalmic surgeon to exercise adequate supervision over the refractionists working under him, but he thought there were no grounds for that view.

The Chairman of Council commended the scheme as an example of what could be done in organizing a scheme for a specialty. Taken as a whole, he added, it was a very satisfactory solution of one of the most difficult problems which would have to be faced in the future, and he congratulated the Ophthalmic Group upon it.

The scheme was approved by the meeting without dissent.

HOSPITALS

Permanent Appointments

Mr. R. L. Newell (Chairman of the Hospitals Committee), in introducing the report under "Hospitals," said that in 1939 the Association recommended that for the period of the war no permanent appointments should be made to hospitals, but recently many advertisements for posts of a permanent nature had been coming to the *Journal*, and some forty senior appointments had been made to mental hospitals, much to the dissatisfaction of serving psychiatrists. Nothing must be allowed to jeopardize the future of these who were serving in the Forces, and the Council had accepted the Hospitals Committee's recommendation that everything possible must be done to prevent such permanent appointments being made.

A subcommittee had been formed to deal with the difficult question of hospital beds for practitioners, and had held two meetings. It was hoped that it would present its report in the near future. There were differences between urban and rural districts, but it would be of great advantage if the practitioner had beds in a hospital with ready access to expert consultant opinion. The cottage hospitals had met that need to some extent, but had been rather overweighted by surgery.

General Practitioner Hospitals

Dr. W. N. Leak (Mid-Cheshire) moved a resolution welcoming the proposed action of the Council for the preservation and development of small general hospitals staffed by general practitioners and welcoming the value of these hospitals to the community, especially if adequately equipped with ancillary services. Such hospitals, he said, tended to be overlooked when large schemes were prepared, but their value was fourfold. The fact that there was such a small hospital in existence attracted the better type of general practitioner to the area. They relieved the larger hospitals of a great deal of minor and routine work, and enabled it to be done near the home of the patients. They did not require the same rigid routine and organization as the larger hospitals, and could cater better for the personal characteristics of the patient. They enlisted local support, and people felt at home in them. Consultants could learn from them how to treat patients as human beings, rather than treating human beings as patients. Some of the doctors who used them might be incompetent or too venturesome, but with all their drawbacks these small hospitals were more than glorified health centres, and represented an essential agency in the health service of the country.

Dr. G. MacFeat (Lanarkshire) maintained that the general practitioner hospitals helped to develop a team spirit among practitioners, and if used for the teaching of students would give them a better knowledge than they would otherwise obtain of the kind of work which they would have to do after qualifying. They would also provide suitable resident appointments for the pre-registration year. Many practitioners found they could get much better results in a cottage hospital than when treating a patient in his own home. Dr. A. C. E. Breach (Bromley) voiced the opinion of his Division that to deprive the general practitioner of the facility of attending his patients in hospital would be a major disaster.

Mr. Newell suggested that the motion was ambiguous. It welcomed the action of the Council, but the object of the Council was to bring into being a type of hospital which had not existed before, to provide practitioners with facilities for treating patients within their own sphere. Much damage had been done by the performance of major surgery in the smaller hospitals, and it would be wise not to accept the motion if it meant that that type of work was to be done in them. Mr. Anthony Green (Guildford) said that as a member of the Volims consultant committee he would like to draw attention to the Volims report, which could be obtained from the Association, and which emphasized the importance of the type of hospital in which the general practitioner could see and treat his own patients. Mr. C. E. **Beare** (Reigate) did not agree that all cottage hospitals were incapable of doing major work, and said he could not support the Council if they desired to make all the smaller hospitals into health centres. Dr. **Leak** suggested that it was a matter of degree. A certain amount of major work was done satisfactorily, but very few general practitioners would try to do anything beyond their competence.

The motion was carried.

Part-time Consultants on Hospital Staffs

Dr. **Howie Wood** (Isle of Wight) moved to request Council "to inform part-time consultants and specialists on hospital staffs what steps were being taken to safeguard their position and future employment, and recalled that in 1944 the Representative Body said that they should not be excluded from the appropriate group for their specialty and that steps should be taken to ensure that the profession was not split rigidly into two groups—consultants, and others. The Chairman of Council had later given the assurance that there was no need for apprehension, but since then he had received letters stating that part-time men were being requested to resign their positions in favour of whole-time consultants, and it appeared probable that in the new national health service the part-time consultant must become either a general practitioner or a whole-time specialist. If it was made impossible for those interested in a specialty but predominantly engaged in general practice to continue, the efficiency of the service would suffer. Many of the best general practice partnerships consisted of teams of men each of whom was a part-time specialist. The motion merely asked the Council to implement the assurance which had already been given.

Dr. N. **Stevens** (West Suffolk), in supporting the motion, mentioned the case of the pathologist in a hospital in his area who, though he was a general practitioner, had held the appointment for 15 years, but was then told that he must give up general practice or give up the appointment, and had been superseded. That was very unfair.

The motion was carried.

Medical, Nursing, and Domestic Staffs

Dr. W. **Radcliffe** (N.E. Essex) moved that steps be taken to obtain the release of nursing and medical personnel and the direction if necessary of domestic help for the voluntary hospitals and nursing homes to deal with the civilian population. Two of the hospitals serving his area, he said, had recently had to close down 12% of their beds through lack of nursing and domestic staff, though their waiting list was four times as long as it was before the war.

Dr. J. C. **Arthur** (Gateshead) said that the position in nursing homes, and especially in small maternity homes, was becoming desperate, and they were having to close down. The shortage of nurses was largely due to the operation of the Excess Profits Tax, which had led to the employment of some 8,000 skilled nurses in the industrial medical service, since the cost did not fall on the firms concerned. The work being done by those 8,000 nurses could be done by half that number without loss of efficiency, and the Association should ask for a drastic overhaul of the establishment of that service. With regard to domestic workers, although the Government would not direct female labour to private domestic work, a great deal could be done without explicit direction. In one case, where a doctor in the North badly needed domestic help, a girl was told she would be sent to work on a bus in Birmingham, but it was added that were she working for this doctor she would not be sent. That had the desired effect.

Dr. **Radcliffe** accepted an amendment to delete the word "voluntary," it being pointed out that the shortage was just as acute in municipal hospitals. Dr. P. **Phillips** (Bristol) emphasized this point, and said that the Ministry of Labour had just withdrawn all staff nurses from the wards of the municipal hospital in Bristol, leaving large wards of 36 beds in charge of a second-year or third-year probationer nurse. The hospitals were in desperate need. Dr. R. W. **McConnel** (Buckinghamshire) mentioned that in his county town half the beds in the infirmary were empty because of lack of nursing staff, and in a new sanatorium only a quarter of the beds were occupied for the same reason.

The motion, amended by the omission of the word "voluntary," was carried without dissent.

FINANCE

Dr. J. W. **Bone** (Treasurer) presented the Financial Statement for 1944, which was printed in the *Supplement* of June 23. There was, he said, no material difference in the expenditure as compared with the previous year; the extra expenditure merely reflected the increased activity of the Association, and he hoped that it would be materially increased during the present year. The accounts presented a picture of prosperity and of safe finance. The object of the Association was not to make money, but to save it for future use. Its funds must be safe and easily realizable. Due regard had been paid to the desirability of keeping the ordinary subscription at three guineas, but, because of the various concessions which were made, the average subscription was only £2 5s.

The report under Finance was approved.

BRITISH MEDICAL JOURNAL

Dr. O. C. **Carter** (Chairman of the Journal Committee) moved the approval of the part of the report under "British Medical Journal," and in doing so mentioned that the difficulties due to shortage of paper and shortage of staff still continued. The allotment of paper was based on pre-war consumption and not on present circulation, so that the *Journal* was likely to remain at its present reduced size for some months. A copy had to be sent to every member, and as the membership grew the difficulties increased. It was now necessary to print 53,500 copies each week. Its financial position was very strong, and it cost the Association only a very small fraction of members' subscriptions; but he did not know whether it would be possible to say that in a few years' time, when their post-war plans came to fruition. They were, to adopt a phrase used by Mr. Neville Chamberlain towards the end of the slump, passing from "Bleak House" to "Great Expectations."

The editorial department received about four times as many signed articles as it was able to publish, and all shades of opinion were ventilated in the correspondence columns. In spite of the strain of war, the *Journal* had always appeared punctually, and had continued to do so in spite of the strain of peace; the VE Day celebrations came as it was going to press, but it appeared on time on May 12. Great credit was due to the editorial and publishing departments and to the printers.

Three new quarterly journals were to be published: a *Journal of Social Medicine*, a *Journal of Pharmacology and Chemotherapy*, and a *Journal of Diseases of the Chest*. This would mean that eight special quarterly journals would be published. They attracted to the Association men of high academic standing who took little interest in the medico-political side of the work, and assisted the Association's contribution to the promotion of medical and allied sciences, which was one of the most important functions of the Association.

The Germans used to provide a comprehensive abstracting service of the world's medical literature. There seemed to be an opportunity for the Association to do something to fill the gap, and, with others, it was exploring the possibility of setting up an abstracting service on those lines in this country.

Dr. D. V. M. **Adams** (Lanarkshire) congratulated those concerned on the way in which the *Journal*, still produced under difficult conditions, appeared from week to week. He complained, however, of certain advertisements for Scottish appointments which, he contended, were at an inadequate basic salary. The advertisements were inserted without consulting the Divisions concerned. Dr. **Carter** replied that the salaries offered came within the approved scale operating at present in Scotland.

The report under "Journal" was approved.

ORGANIZATION

The Deputy Chairman, Dr. J. B. Miller, presided over this part of the proceedings.

Dr. J. C. **Matthews**, Chairman of the Organization Committee, presented the report of Council under "Organization."

A Northern Ireland Committee

Dr. Matthews proposed an alteration of the by-laws to permit of a Northern Ireland Committee, similar to the Scottish Committee. He said that Northern Ireland had its own Government, and ought to have a medical body of adequate status to negotiate with it.

The recommendation for the amendment of the by-laws to effect this was agreed to.

Regional Organization of the Association

Dr. J. **McCutcheon** (Glasgow) asked the meeting to reaffirm the decision of the Representative Body in 1943 regarding the appointment of regional secretaries. This was to the effect that arrangements should be made now to appoint full-time regional secretaries so that these secretaries should start to function as soon as possible after the war. Local problems, he said, were becoming more frequent and important.

Dr. F. **Gray** (Council) said that there were three problems to be settled before they could go ahead with regional organization: personnel, buildings, and determination of areas. He wished to put the reasons why the Council did not want to take steps immediately. It was obviously necessary that the regional secretaries should have a period at headquarters during which they could become thoroughly acquainted with the work of the Association before they were sent out to act on their own. As for buildings, the present was not a good time to acquire them, and yet they would be necessary for regional organization. There remained the question of areas. The Government was also proposing regions under the White Paper, and every member of the Representative Body would appreciate how necessary it was in any matter of local government that the areas of the Association should as far as possible correspond with local government areas. It was not known yet how the Government areas were to be determined.

Dr. O. C. Carter (Bournemouth) said that no one realized more than he did the necessity for bridging the gap between the periphery and the centre. He would strongly support regionalization whatever the cost if he thought it was the right thing, but he thought it the wrong thing. The duties of these regional secretaries would be to stimulate inactive Divisions and give the greatest possible encouragement to those which were doing their work well. Most important of all, they would require to be familiar with central Association matters, and they could acquire that familiarity only by living in London and attending Council and committee meetings. He thought, moreover, that if secretaries were posted to regions there would be a tendency for divisional secretaries to short-circuit them and write for advice to headquarters.

Dr. J. G. Thwaites (Brighton) said that his Division had been in favour of regional secretaries, but he was against the Glasgow proposal. The moment was not opportune to put this policy into effect. It would be much better for these new secretaries to serve an apprenticeship at the centre. It was necessary to preserve at all costs the unity of the Association. There was a risk, if they were not careful, and if the secretaries were not properly placed in their job, of the regions coming to look upon them purely as men out to push their own regional interests as against the interests of the Association as a whole.

Dr. W. E. Dorman (Sheffield) urged the meeting to reaffirm the 1943 resolution. Dr. F. M. Rose (Preston) was still convinced of the need for regional secretaries. Association boundaries might be determined, and afterwards readjusted when the Government had made its arrangements. Dr. I. D. Grant (Glasgow) thought that the new secretaries should be appointed to their regions as soon as possible. There was no need to follow slavishly the Government division of the country. Housing was admittedly a difficulty, but he believed that in Manchester there was a house available.

Dr. J. C. Matthews said that this matter had been under the consideration of the Organization Committee for nearly ten years. At the beginning it resulted in the appointment of Dr. Gibson (whose death was greatly regretted) as regional secretary to the Metropolitan area. Plans were being discussed before the war for the extension of regional secretaryship to the Provinces, possibly one secretary being appointed at a time as suitable men came forward. The war came, but the matter was not forgotten. At the Representative Meetings in 1942 and 1943 there were reports on the subject by the Organization Committee through the Council. The problem at present had several aspects. One was the scarcity of doctors at the moment. There would be no justification for taking men into the Association as secretaries when there were such demands upon the profession. Again, the finding of the right man was not easy. A man was needed who had character, presence, and tact, together with a knowledge of Association affairs. The proposal of the Council was to intimate to the profession, including men over-seas, that appointments as assistant secretaries were to be made, with a view to their employment either at headquarters or at the periphery. Such men would be able to assist the present secretaries (who were overburdened), and could also be sent on occasion on visits to the Provinces to make contact with the Divisions. The procedure outlined in the report was not very different from that which Glasgow desired and would achieve the object which the meeting desired. The 1943 resolution was proposed by Lincoln and was to the effect that arrangements should be made now to appoint full-time regional secretaries so that they could start functioning as soon as possible after the war.

The Chairman of Council said that the Council had this instruction in mind, and the steps proposed in paragraph 66 were the business-like method to follow. Assistant secretaries would be appointed, they would learn the technique and run of the offices, and be sent into the Provinces to meet the Divisions; when that had been done and suitable people had been found they would be appointed to regions.

In view of Dr. Dain's statement Glasgow withdrew the amendment.

Dr. Talbot Rogers (Bromley) said that he had been asked to draw attention to a resolution proposed by Bromley last year that in view of the increasing importance of industrial medicine a standing committee to deal with matters of industrial health should be set up. The resolution was accepted by the Chairman of Council, but in view of the discussions regarding the central committee machinery consideration of the matter was deferred. His committee was not satisfied, because it felt that industrial health was a matter of urgency in view of the difficult situations which might arise in the post-war years.

Dr. W. D. Steel (Worcester) moved an amendment that the Council be instructed to institute in the Midland region, centred on Birmingham, the Midland organization of the profession.

The Chairman of Council appealed to the mover to withdraw this amendment for the time being. It was obvious that this was not the proper time to argue where the regional secretaries should be established.

The amendment was withdrawn.

Dr. Matthews said that the matter raised by Dr. Rogers regarding the industrial medical committee would be borne in mind, and this part of the report was approved.

Dr. S. Wray (Lincoln) moved that regional secretaries should be selected only from those who had been in general practice for 15 years and that they should be under 50 years of age on appointment. He said the framers of the motion were of the opinion that the functions of regional secretaries were likely to differ greatly from those of headquarters secretaries, that different qualifications would be required, and the predominant background should be that of general practice. The figure of 15 years was inserted so as to cover men in the Forces.

The Chairman of Council asked the meeting not to tie the hands of the Council in their selection of suitable people.

The motion was withdrawn.

Scottish Assistant Secretary

Mr. Simson Hall (Edinburgh) moved:

> That the pressure of work in the Scottish Office of the Association is now such as to require the appointment of an Assistant Secretary and that such an appointment should now be made.

He said there were two points to mention: the first was that Scotland was not an easy place to get round, and, secondly, the Secretary was so tied to the office by interviews, consultations, and so on that the field work had suffered rather severely. The geographical distribution of the population was such that the larger proportion of practitioners were in Glasgow and its environs, and their Glasgow colleagues felt that they deserved a little more of the time and attention of the Secretary. The Edinburgh Division asked that this matter be referred to Council for consideration.

The Chairman of Council accepted the motion.

It was agreed that the resolution be referred to Council, and the remainder of the report under "Organization" was approved.

THE NEGOTIATING COMMITTEE

At this point, by previous arrangement, certain motions under the heading of "The Negotiating Committee" were taken.

Buying and Selling Practices

Dr. R. S. Brock (Denbigh and Flint) moved:

> That the custom of buying and selling practices cannot be retained in any comprehensive health service without prejudice to the interest of the profession and of the public, and that this meeting favours abolition of the custom at the outset, provided that agreement can be reached not only regarding compensation but regarding security of tenure of existing practices within an administrative structure and under terms of service acceptable to the profession.

The motion rested on the assumption, he said, that it was the intention of the Government to introduce a co-ordinated and comprehensive health service which would ensure that the services of every available doctor were utilized. The criterion ultimately adopted by such a service must be the capacity of the doctor to do the work required of him, and not his capacity to buy a practice. The market for practices must gradually disappear, and if the profession waited until then before compensation was agreed it would lose the chance of being compensated at all. No Government would dare to establish a precedent by compensating doctors for loss of market. Unless a clear indication was given to the Committee, it might be hampered by the Hendon resolution, passed at a previous meeting.

Dr. R. W. Cockshut (Hendon) recalled that the Hendon resolution just referred to was that it was in the national interest and essential to the independence of the medical profession that doctors should continue to own the goodwill of their practices. It had been possible to use that resolution in the negotiations with the Minister of Health, and the Government had issued a statement on compensation which put off the question for an indefinite period and left doctors the masters of their own practices. Compensation would cost anything up to £80,000,000, and what would the Government get for the money? The answer was the freedom of the doctor. "At the last Representative Meeting," he added, "we gave away a great slice of our freedom; do not now give away what is left." (Applause.) If the Government gave compensation they might allow a doctor to remain in his practice, but when he wished to pass it on, say, to his son, the Government would say: "No, your son cannot take it over; we are going to bring it into a health centre."

Dr. R. W. McConnel (Buckinghamshire) maintained that those who favoured the buying and selling of practices were thinking not only of their pocket but of their patients; they wanted to be able to choose their successors.

The Chairman of Council said it had been the policy of the Negotiating Committee to press the Minister to make the Government's position in the matter definite, and the Government had stated that there would be no interference with the sale and purchase of practices when the new scheme started. He hoped the meeting would leave it at that. It was a guarantee of freedom to have something of one's own.

Dr. Brock, in reply, said it was natural that the Government should be prepared to allow the continuance of the purchase and sale of practices. They would arrange matters so that there was nobody left to buy when practitioners wanted to sell, and so no compensation need be paid. The statement of the Chairman of Council meant a reversal of the policy previously formulated by the Council on the subject. His Division wished the custom of buying and selling practices to continue, provided the market value of practices was maintained; but they did not see how it would be possible under the scheme to avoid the gradual fading away of the market for goodwill.

Dr. Douglas Boyd (Belfast), in opposing the motion, said that unless and until the right of private practice was abolished the principle should be upheld that a man was entitled to the fruits of his labour. A doctor's practice was normally valuable in proportion to the amount and quality of the work which he put into it; if he could not transfer that for a material consideration he became a lessee, and his landlord was the civil power. If the majority of doctors were denied their property rights, they would become a dependent profession, and would be unable to secure proper terms and remuneration for their work. If there were abuses in the buying and selling of practices they should be remedied, but it was not in the national interest that the right to private property should be abolished.

The motion was lost by a large majority.

Insufficiency of Doctors

Dr. A. G. Holman (East Norfolk) moved that the national medical service should not be started until sufficient medical personnel were available to run it. Under the recent Education Act, he pointed out, free medical attention for children had been promised, but the personnel to provide it were lacking, and local authorities had had to fall back on general practitioners to help them out of the difficulty.

Mr. Lawrence Abel (Marylebone) suggested that the resolution that national health insurance should be completed, which had already been passed twice by the Representative Body, covered the point raised; but the present motion should strengthen the hands of the Negotiating Committee and enable them to say to the Government: "Give us our hospitals in proper order and make proper arrangements for all your sick workers."

The motion was carried.

The Control of the New Health Service

Dr. Holman further moved that in order to ensure executive power for the professions concerned in working the proposed health service, the possibility of its control and administration by a separate corporate body be given consideration as a matter of urgency. The objections to a corporate body, he said, amounted in effect to the statement that he who paid the piper should call the tune, but in this case two parties were paying the piper but it seemed that only one was to call the tune. Public funds would largely maintain the health services, but they were to be built on the capital, the buildings, traditions, and goodwill of the voluntary hospitals and on the experience and training of the medical profession. The White Paper relegated the medical profession to a purely advisory position, and even the advisers were to be chosen by the Minister—a sort of ministerial medical Gestapo. What happened when executive power did not lie in the hands of the medical profession was shown before the war by the failure of public authorities to implement their powers in regard to tuberculosis, maternity, cancer, and so on, and during the war by the wholesale evacuation of tuberculosis patients in all degrees of infectivity from certain sanatoria, and by the failure to foresee the need to reserve trained nurses and domestic staffs for hospitals and nursing homes, and by the chaos in medical demobilization.

Ministerial control meant administration on departmental lines, which could never be elastic enough to meet the requirements of a service so intimate as a health service. In the E.M.S., a patient might die while waiting for necessary forms to be completed in triplicate, but so long as he died according to the regulations, honour was satisfied. The principle of block grants to meet expenditure existed already in the case of the universities, and a similar arrangement was warranted for the health service.

Mr. Lawrence Abel moved as an amendment the substitution of the words "other than by the Ministry of Health" for the words "by a separate corporate body." At the last meeting, he said, the Representative Body decided against the running of the new service by a separate corporate body. From the point of view of the health of the public it was difficult to say which would be better, the Ministry or a corporate body; but there was a growing feeling in the medical profession against being put under the Ministry of Health. The Ministry's action in allowing thousands of people to die because they would not make compulsory the pasteurization of milk was a scandal, and was enough to make every doctor say, "We will not negotiate with the Government until they give us pure milk." He had nothing to say about a corporate body, except that no one knew what it meant or implied, but he was certain that the majority of doctors did not want to be ruled and enslaved by the Ministry of Health. (Applause.)

Mr. Dickson Wright (Marylebone), in supporting the amendment, said that when a corporate body was mentioned reference was apt to be made to a "medical hierarchy," but the members of such a body could be changed from time to time if they did not meet with the approval of the profession, whereas the permanent officials of the Ministry could not. There were at present 700,000 civil servants, and it had been estimated that the new medical service would employ a similar number, at an annual cost of £170,000,000. The doctors should have a say in the running of a service in which they were intimately concerned.

Dr. C. E. Cobb (Aldershot) described the problem as that of choosing the lesser of two evils. The fact that in 1942 and 1943 the Representative Meeting supported control by a corporate body, and that last year the Council could not quite make up their minds, showed that further investigation was necessary. Replying to a letter from the chairman of the Aldershot and Basingstoke Division, the Chairman of Council wrote: "The corporative alternative to departmental control was brought to the notice of the Government by the Negotiating Committee, but was not pressed. It would be impossible for me to say why members of the Council are opposed to the corporative solution, but in my personal view we should not be any better off in the hands of a corporate body than in the hands of a Minister." That was very likely correct, but there had been so many changes of mind that he felt that further investigation was necessary. Dr. J. B. W. Rowe (Harrow), who also supported the amendment, instanced the case of the Port of London Authority, whose executive was elected by the members. Mr. C. E. Beare (Reigate) drew attention to the recent Rushcliffe report on what was a sort of national legal service, and pointed out that the legal profession took the view that such a scheme must be controlled by lawyers, and that that view had been supported by the Press. In his view, a corporate body would afford the medical profession more control than if they were under the Minister of Health. Dr. E. D. Broster (Derby) said the vital importance of central organization and executive control had been emphasized again and again, yet the provisional report of the Negotiating Committee contained only a restatement of the words of the White Paper. The Negotiating Committee seemed unable to make any headway in this regard, and the record of the Association *vis-à-vis* the Ministry of Health had been deplorable. He had not the slightest trust in advisory bodies as safeguards. Mr. Anthony Green (Guildford) suggested that it was inadvisable to close the door and say that there was no alternative to the Ministry.

Dr. Holman intimated his willingness to accept the amendment.

The Chairman of Council asked the meeting to face the issue properly, as members had done in May, when they had all the information before them. They were asked then, he said, to decide whether they were in favour of a corporate body for central administration instead of the Ministry of Health, and, having heard the arguments, they decided in favour of the Ministry. The Representative Body originally expressed an opinion without knowledge; the Council obtained knowledge and published in the *Journal* a statement by a lawyer on the position of a corporate body, and, having read that and discussed it, the Representative Body decided by a very large majority that they did not want a corporate body. They were now asked to go into the question all over again without any fresh information being forthcoming, and the amendment asked them to say that they did not like the Ministry of Health without suggesting any alternative.

In this democratic country Parliament was responsible for all the public services. For the medical profession to say that it would take part in a public service provided it was not responsible to Parliament through a Minister in the ordinary way would be a waste of time, because doctors were too sensible to take that view and the public would not stand for it. He did not agree that the Association had always done badly in negotiating with the Ministry of Health. The Port of London Authority had been referred to, but that was supported by the payments in the port, whereas the public medical service would be run on public money. The lawyers were considering a scheme for people with an income of under £420 a year, but no public money was to be provided there. The influence of the Association was steadily increasing, and was better now than it had ever been. He hoped the meeting would not do anything so absurd as to say that it would not have a public service responsible to Parliament through a Minister. The White Paper was always being referred to as if it was the last word, but material changes had been made since it was issued.

Mr. Lawrence Abel, in reply, said that since the last meeting schemes had been evolved for putting the control of the medical profession in the hands of the universities in their various regions, and he would submit that the profession in the different regions could control medical work better than someone in Whitehall. He spent a lot of time seeing doctors who had bleeding duodenal ulcers due to worrying about being under the State, and he thought they would all be bled white if they got under the Ministry of Health.

Mr. Abel's amendment was lost.

Dr. A. C. de B. Helme (Guildford) pointed out that the Representative Body had never agreed specifically, but only by inference, to the service being placed under the Ministry of Health, and several questions had arisen recently which had a bearing on the matter, so that it was only right to consider any possible alternatives.

The Chairman of Council agreed that the Representative Body had never said it would be willing that the new service should be under the direction of the Ministry of Health. It had said it was not in favour of a corporate body, and no one had suggested a method of being responsible to Parliament except through a Minister. The motion was lost.

The Right to "Opt Out"

Dr. J. O. McDonagh (Perth) moved that in any national health service the right to opt out should be retained, and that any patient taking advantage of this right should be entitled to the refund of a proportion of his contributions. The right to opt out, he declared, was an essential safeguard not only for the doctor but for the citizen, who should be allowed to retain what remained to him of his independence.

Dr. Douglas Boyd (Belfast) moved as an amendment to substitute the following:

> (i) That all persons compulsorily insured should have the right to opt out from the Government service in matters of medical advice and treatment and receive a financial grant towards a private contract, and that no new agreements be entered into which do not effectively safeguard this right; (ii) that insured patients should be in a position to assign to the hospital or nursing institution of their choice any financial grant received through their health insurance authority.

The amendment, he said, gave a much stronger administrative direction to the Negotiating Committee. The Association had already decided that it wanted freedom for the individual practitioner to conduct his own practice in his own way, freedom from unjustifiable interference from officials, and reasonable remuneration for all work done. Experience of the National Health Insurance Acts showed that there was a trend for economic reasons towards a 100% clinically controlled State service, which would mean the loss of the power to negotiate decent conditions for the public and fair remuneration for the doctors. Every compulsorily insured patient should have the maximum possible liberty to decide what type of service he wanted. That would be opposed, because a 100% service was easier to administer, but that was no reason for denying to the public its right of choice. If there was only one type of service available, the public would have no standard of comparison by which to judge whether it was getting the best service. The public, he thought, wanted a national health service, but did not want control by State officials. If the Negotiating Committee were not satisfied on this score, they should reject the whole scheme.

The second part of the amendment sought to secure for voluntary hospitals the same freedom which was desired for the general practitioner. The voluntary hospitals must be free and autonomous bodies, with their policy co-ordinated but not dominated from outside, and that could be secured only by giving them grants for services rendered, payable to the hospital board by the patient, who would be free to choose the hospital giving the best service.

Dr. S. F. L. Dahne (Reading) said it was the essence of democracy that there should be alternatives for the patients and the profession to turn to; if not, it would lead to the servile State. He had had the opportunity to put this point to the Minister himself, and, not being satisfied with the answer, followed it up with a letter, to which the Minister's reply was more hopeful; he wrote saying that the matter was of immense importance, and that he would give it serious consideration. Personally, he supported the Belfast amendment.

Mr. Mark Fraser (Cumberland) said that at a previous meeting the Representative Body agreed to accept a 100% service provided there were proper safeguards to give patients freedom of choice of doctor and doctors the right to retain private patients, so that he thought that the first part of the amendment had been fully covered already. Dr. J. A. Ireland (Council) suggested that it was entirely dishonest and immoral for them to say that they would take on the whole of the population and then talk of treating some people on private lines. Dr. F. A. Roper (Council) said that this attitude was a dubious one and he very much doubted its wisdom. Was it likely that the Government would be willing to accept this principle of opting out, which seemed insidiously subversive of the Government's aims? Dr. W. N. Leak (Mid-Cheshire) supported the Belfast amendment. The analogy which some had drawn between medicine and education was false. When they sent their boys to a private school they knew what it was going to cost, but no one could say what illness would cost. It was an unlimited risk, only to be covered by a wide scheme of insurance. Dr. Talbot Rogers (Bromley) thought they should stand firmly on the position at which they had now arrived. If they tried to get opting out they might place themselves in difficulties without attaining anything really tangible. Dr. E. T. Wright (Marylebone) supported Belfast. In May, 1945, the Representative Body expressed a willingness to negotiate on the 100% inclusion, but in December, 1944, it decided that National Health Insurance on evolutionary lines was the direction in which it should progress towards the nationalization of medicine, and National Health Insurance had a proviso that the individual worker could opt out. Such a right as opting out should be strongly advocated; it was the right of a free people. Dr. J. C. Arthur (Gateshead) agreed with the fundamental idea of the amendment. What he was concerned about was not the freedom of the doctor but the freedom of the citizen, the freedom of a man to spend his money as he liked. What was the position of the lower middle-class patient, with whom every shilling counted, who wanted at the same time to have his own doctor in his own way? Dr. A. C. de B. Helme (Guildford) said that if the Belfast amendment were rejected it would mean that the meeting declared itself in favour of monopolies or cartels, to which people in general were opposed. Mr. Anthony Green (Guildford) thought that the public would look upon them with disfavour if they failed to support their chance to opt out. Dr. A. Smith Pool (Glasgow) asked how private practice could honestly continue if people who were in the scheme were to be charged a fee but their claim for an allowance in respect of their treatment was not supported. Dr. J. S. M. Ord (Glasgow) spoke against Belfast. To his mind this policy would lower the profession in the eyes of the public.

The Chairman of Council said that the Belfast amendment sought to do two things which were contrary the one to the other. It spoke of opting out, when if a person opted out he would have no benefits under the scheme, and it spoke at the same time of receiving benefits. The public could not have it both ways. How could anyone expect to get a grant-in-aid if he put nothing in at all? By opting out he would have paid nothing and would not be entitled to receive anything. The Special Representative Meeting, in its resolution on the 100% provision, had called for safeguards to insure that any member of the community, whatever his income, should be able to obtain his medical service, in part or in whole, privately, as, for example, by grant-in-aid provisions. The amendment was not very logical.

Dr. Douglas Boyd, replying, said that this was simply a direction to the Negotiating Committee. It was fully realized that if there was a right to opt out there must be safeguards in order that the public might be protected against victimization, although the likelihood of victimization by a doctor was very small. But it was also important to safeguard the right of the public to choose the type of service it wanted. The public in Northern Ireland were quite clear about two things—they wanted a National Health Service, but not a medical service controlled by State officials, and they wanted the right to choose their own doctor, to accept or refuse the advice given them, and to ensure the secrecy of clinical records.

A show of hands on the Belfast amendment resulted as follows:

In favour	114
Against	74

Dr. A. **Beauchamp** asked whether the carrying of the amendment meant a reversal of the policy of the Association, and if so whether it did not require a two-thirds majority.

The **Chairman**: We do not consider that it reverses the policy.

The Perth motion as amended by Belfast was then adopted.

The Spens Committee

Dr. H. H. **Goodman** (Newcastle-upon-Tyne) moved to urge the Association to expedite the findings of the Spens Committee so that its conclusions were available before the profession decided to take part in the proposed new health service. His Division was deeply concerned that shortly they would be having a new medical service on the statute book, and they would not be in a position to know what they would be paid for their services. This was purely a matter of business; he did not put his trust in any Government. He could not believe that the Spens Committee had nothing to do with the National Health Service proposals.

Dr. J. A. **Brown**, a member of the Spens Committee, said that he felt sure that the committee would do its best to issue a report as soon as possible, but he hoped that it would not be hurried unduly, because its decision might have far-reaching effects on the future of medical practice as a whole. Recruitment to medicine had shown no signs of falling off, but it was well to remember what had happened in nursing. Nursing, like medicine, had been called a noble profession, but in return for the title of nobility it was underpaid and overworked until recruits ceased to be attracted, with the result that hospitals were at their wits' end to find suitable candidates so long as conditions of work remained unimproved. Unless something was done for medicine, recruitment might diminish. The Spens Committee had a high sense of its responsibility to the profession and the public.

The **Chairman of Council** said that there was no risk of the profession's being asked to accept terms before the Spens Committee had reported.

It was agreed to pass to the next business.

Views of Practitioners with the Forces

Dr. H. S. **Pasmore** asked the meeting to declare that inadequate opportunity was being given to medical practitioners serving with H.M. Forces to express their views on the future medical services. If profound changes of a controversial character were going to be made in the medical service the one-third of the profession who were in the Forces should be fully consulted. They were the younger part of the profession on whom the main task of running the service would depend.

Mr. C. **Gibson** (West Sussex) moved to re-word the Kensington motion as follows: "That the Council be instructed to take steps to stimulate and increase the expression of opinion on the White Paper by Service medical practitioners." Of all groups of doctors the medical officers in the Services should have the largest interest in the future conditions of practice, yet they appeared to have been the least vocal up to date. Their response to the Questionary was small, and they had not written many letters to the *Journal*. Since March 248 letters from civilian doctors had appeared, but only 31 from serving officers. He suggested a leading article in the *Journal* asking Service medical officers to voice their views. The Council might offer speakers to places like Aldershot, where there were large numbers of Service medical officers, and it might be possible to approach the Directors-General of the different Services and enlist their help.

The **Chairman of Council** said that he did not want it to go out that they were not taking all the steps they possibly could to interest and discover the views of serving officers. Dr. Hill, on a number of occasions, had accepted invitations to address groups of officers at Services centres.

The amendment was lost and the Kensington motion was carried.

The 100% Issue

Mr. **Donald Watson** (Bradford) moved that the Council be requested to make concrete proposals safeguarding private practice under the 100% National Health Service. The recommendation of Council on the 100% issue, he said, was passed with a proviso as to private practice, and all that he asked was that the Council should enumerate the proposed safeguards so that they could be studied and voted upon.

The **Chairman of Council** gave the firm assurance that concrete proposals would be placed before the Representative Body before it was asked to say that private practice was properly safeguarded.

Mr. **Watson** was not quite satisfied. His Division wanted to have these intimate points about private practice detailed.

His motion was carried.

Dr. E. **Babst** (Tyneside) moved that no further discussions on Government Health Services be taken in the Representative Body until the Spens Committee report on the financial aspect of the Services was available. The last Representative Meeting carried a resolution accepting the 100% principle, but no mention was made of remuneration. His Division felt that to accept that principle without knowing what the remuneration was to be was a serious error, and that the Negotiating Committee should have told the Government that this question must be settled first.

Dr. O. C. **Carter** said that if this motion was carried the meeting would be exerting indirect but considerable pressure upon the Spens Committee, and he moved to proceed to the next business.

The motion to proceed to the next business was carried.

PUBLIC HEALTH

The School Medical Service

Dr. J. **Fenton**, on behalf of the chairman of the Public Health Committee, presented the report of Council under "Public Health." He explained that he did so in the absence of Prof. Picken, who on his recent appointment as Acting Provost of the Welsh National School of Medicine had felt himself compelled to withdraw from Association work, to their very great regret. His withdrawal, which they hoped was only temporary, was a great loss to the Association.

Dr. Fenton said that one of the principal matters in the report concerned the medical service under the new Education Act. That Act introduced a new comprehensive medical service for school-children. Here was a large section of the community taken out of the whole, for whom the Government had introduced a free medical service in anticipation of the national medical service. It was on the statute book and was there to be implemented. With the shortage of doctors at present no service as effective as the profession would wish could be given; nevertheless, in the coming months local education authorities would be bringing in this new service, and it behoved the Council and Divisions to scrutinize their actions very carefully so as to be satisfied that nothing but an efficient service was likely to result. The Council would keep the matter very closely under observation.

Dr. H. M. **Golding** (Bristol) moved that the following observations on the Education Act, 1944, should be stressed:

> "The Association upholds the principle that the health of the child should be in the care of the family doctor, and it should be his responsibility to obtain any necessary consultant services. Hence it deplores the acquiescence by the Council in the provision for direct reference to hospital by the school medical officer, and strongly protests against the Council's failure to promote the doctor–patient relationship as between the family doctor and the child."

The backbone of any new service should be the family doctor.

Dr. J. G. **Thwaites** (Brighton) said that the step taken by the Ministry of Education was an example of unilateral action by a single Government Department without consideration for the Ministry of Health or previous consultation with the organized medical profession. He hoped the meeting would support, not only the Bristol motion, but any action which the Council proposed to take in the near future.

Dr. J. A. **Pridham** (Dorset) said that the profession was at last waking up to the provisions of the Education Act. They were not taking exception to the fact that the treatment of children was made free. Much had been heard of "splinter politics," but this was "splinter medicine." It had been hoped to see an integration of services, but this was a reversal of the process. They could not protest too strongly against the action of the Ministry of Education, but at the same time he did not like the Bristol motion, which seemed to condemn the Council. The Council on the previous day had agreed to set up a special committee to consider the implications of this section of the Act.

Dr. P. **Phillips** (Bristol) said that with hyperspecialism coming more and more to the fore he visualized a time when the newborn would be looked after by the paediatrician, followed by the health visitor, and afterwards by the school medical service, and the first time the general practitioner would learn anything of the history of this individual would be on his entrance at 16 or 18 into National Health Insurance.

Dr. J. B. W. **Rowe** (Harrow) said that he had examined many children of school-leaving age and had made a short analysis of the results. Among 235 children he found the following proportion of defectives:

	Boys	Girls
Postural defects ..	55%	55%
Dental defects ..	33%	41%
Foot defects	21%	17%
Defects of vision ..	12%	9%
Tonsillar troubles ..	10%	9%
Skin troubles ..	4%	19%

These preventable deformities were allowed to go on during school life until it was far too late to remedy them. He asked that the plight of these children might be borne in mine when a vote was taken on the matter.

Dr. H. H. D. SUTHERLAND said that there were a good many families where there was no doctor. Most of these cases were probably in the poorer parts of towns. The Public Medical Service had covered this in a large measure, and it would be interesting to learn whether a legal expert would say that in a case where a child was taken away from its usual medical attendant under the Public Medical Service damage had been done to the doctor's contract with that family, quite apart from other cases where the doctor was the recognized private medical attendant of that family and child.

Mr. SIMSON HALL (Edinburgh) said that to believe that the Council's report suggested they were going to take away from the practitioner the care of the children was ridiculous. The Bristol motion was founded upon a misconception. This loophole referred mainly to the slum child who had no medical attendant. No matter how much one might try to persuade parents to have their children looked after a certain number would not do it. This provision in the Council's report concerned children who were otherwise going to be neglected. The child was their first care, and they must do nothing to prevent that child from being properly looked after.

Dr. FENTON said that the Council's view was that the child should normally be looked after by its own doctor, but there were exceptional cases, such as an outbreak of scabies, when other measures might have to be taken.

The second part of the Bristol amendment deploring the "acquiescence of the Council" was withdrawn, and the first sentence was carried.

Mr. LAWRENCE ABEL (Marylebone) moved to add as a rider: "and that the Council be instructed to arrange for adequate representation of the views of consultants, whole-time and part-time, including a special meeting in London of representatives of consultants." This question of an item-of-service basis was going to loom large in the near future, not only concerning school-children, but concerning other work of consultants. There was a remarkable lack of attendance of consultants at meetings of Divisions, probably because they felt that many of the matters at issue did not concern them. But here was a matter which did concern them, and special steps should be taken to ascertain their views.

Dr. FENTON said that in the committee which the Council was setting up to go into this subject it would see that consultants were specially represented.

Mr. ABEL hoped that the representation would be adequate.

The CHAIRMAN OF COUNCIL said that he would be glad to consider this proposal.

Mr. Abel's amendment was agreed to.

The consideration of the remainder of the report under "Public Health" was adjourned until the following day.

ELECTIONS

During the course of the day it was announced that Dr. J. B. Miller, of Bishopbriggs, Lanarkshire, had been elected, unopposed, Chairman of the Representative Body—the first practitioner in Scotland to be elected to that position. Dr. MILLER, who was greeted with loud cheers, said that this was one of the greatest distinctions that could fall to an ordinary practitioner. He was a Lowlander and could not possibly expect to bring to the Chair the dignity of a Macdonald, but as one who had already served some apprenticeship, and who knew with what celerity he would be told of his mistakes, and with what generosity he would be forgiven, he accepted the position with a due sense of its honour.

It was also announced that Dr. E. A. Gregg had been elected Deputy Chairman and that Dr. J. W. Bone had been re-elected Treasurer.

The following were elected members of Council by the Grouped Divisions: (1) Dr. J. A. L. Vaughan Jones, (2) Mr. D. R. Owen, (3) Mr. A. Staveley Gough, (4) Dr. S. Wand, (5) Dr. H. R. Frederick, (6) Mr. A. Dickson Wright, (7) Dr. R. W. Cockshut, (8) Dr. O. C. Carter, (9) Dr. A. Talbot Rogers, (10) Mr. I. Simson Hall, (11) Dr. W. D. Frew, (12) Dr. J. M. Hunter.

The following eight members of Council were elected by the Representative Meeting as a whole: Dr. J. C. Arthur, Dr. A. Beauchamp, Prof. A. H. Burgess, Mr. V. Zachary Cope, Dr. W. E. Dornan, Dr. R. Forbes, Dr. R. G. Gordon, Dr. A. Smith Pool.

The selection of practitioners who will have the support of the Association in an election of Direct Representatives for England and Wales for the General Medical Council resulted as follows:

Dr. J. W. Bone, Dr. H. Guy Dain, Dr. E. A. Gregg, Sir Kaye Le Fleming, Dr. N. E. Waterfield.

The meeting adjourned at 6 p.m.

THIRD DAY

Thursday, July 26

The Representative Meeting reassembled at 10.45 a.m. The hour of meeting had been put back to enable representatives to attend a showing of the film *The Family Doctor* at an adjacent cinema. From time to time during the meeting the results of the General Election were announced.

Dr. PETER MACDONALD again occupied the chair.

PUBLIC HEALTH

The discussion on the section of the Annual Report of Council under "Public Health" was resumed. Dr. J. FENTON, deputy chairman of the Public Health Committee, had presented the report on the previous day.

School Medical Reports

Dr. E. C. DAWSON (Derby) moved that school medical reports should be made available only to the patients' own doctors. Other medical officers requiring school medical reports should first obtain the written consent of the parents or guardians. If such reports were sent to industrial medical officers, he said, they might, if unfavourable, prejudice the interests of the children concerned. The right of young people to have information regarding their medical history regarded as confidential should be respected. A discussion of all aspects of the availability of school medical reports might be useful, with a view to clarifying the situation.

Dr. FENTON expressed sympathy with what the proposer had said, but not with the motion, which referred to all other medical officers, and not industrial medical officers only. When a child moved to another school a report was sent showing the infectious diseases which that child had had, and when children were evacuated from London information regarding diphtheria immunization and so on was sent to the doctors in the country areas concerned; similar information was given by them when the children returned, and such action was in the interests of the children and of the community generally. He recommended the reference of the motion to the Council, so as to obtain a form of words more in accordance with the speech made by the proposer.

Dr. DAWSON agreeing with this course, the motion was referred to the Council.

The Education Act, 1944

Dr. R. FORBES (Hendon) moved:

> That the Representative Body places on record its grave dissatisfaction with the failure of the late Minister of Education to receive favourably the proposals of the Council of the Association on the inability of the profession to implement at present and for some time to come the operation of section 48 (3) of the Education Act, 1944, and urges the Council to warn the new Government of the need to suspend the operation of this section until agreement has been reached on the terms and conditions applicable to the establishment of a National Health Service.

The Education Act of 1944, he said, was in his view of more serious significance than the proposals for a national health service, because it was already in operation. Section 48 required the local authorities to provide the children with medical attendance; circulars had already been sent to them on the subject, and they were beginning to take action. Chaos might result if the matter was not carefully watched, and many practitioners might find a large section of their private practice abstracted from them and handed over to clinics, hospitals, and so on.

When the Act was being drawn up Mr. Butler, who went out of his way to negotiate with many of the interested parties, was approached by the Association. At first he declined to meet them. On further pressure he did so, but declined to accept their contention that the time was not opportune to introduce the provision in question and that the personnel to give effect to it did not exist and would not exist for some time to come. The present Minister (Mr. Law) had been interviewed and had said: "I shall not approve any proposal which would lead to the setting up by the local education authority of a general medical practitioners' service." He had not said, however, what he would approve, and that left a loophole which might be dangerous.

Dr. R. W. MCCONNEL (Buckinghamshire) said that if the Association adopted the motion it might be accused of being indifferent to the needs of the schoolchild. It would be better, he thought, to pass the next motion on the agenda, standing in the name of East Yorkshire. Dr. VAUGHAN JONES (Leeds) maintained that the Association should take the initiative in the matter. Draft schemes were being prepared, and all Divisions should approach their local authorities to ascertain whether such schemes were available. Dr. J. A. IRELAND (Shrewsbury) protested against any suggestion of watering down the motion; there had been too much of that, he contended, in the past, and it was time the Association put its foot down. Section 48 (3) could not be implemented. The Minister might say he would lose face if it was not implemented, but they were not interested in the face of any Minister. Dr. FENTON pointed out that the motion merely confirmed in stronger terms what the Council had already said in paragraphs 25 and 26 of their report. The matter would require careful attention in the coming months, when local authorities would be introducing schemes.

The motion was carried without dissent.

Dr. I. G. INNES (East Yorkshire) moved that a protest be made against the introduction by the Government of a comprehensive medical service for school-children which was not part of the proposed national health service, without consultation with the medical profession, and that clarification be sought of the conditions and scope of such school medical service. The White Paper, he said, laid it down that, when the new health service was able to take over the comprehensive care of health, the education authority as such would give up medical treatment, but the Education Act was in complete contradiction of that. It almost seemed as though there were to be two comprehensive services.

The CHAIRMAN OF COUNCIL said he had already been twice to the Minister of Education on the problem. The difficulty of the new Minister appeared to be a political one; with a General Election pending, no political party was willing to say that the free medical treatment of school-children must be postponed, even though the Minister knew that it could not be implemented. When the new Government was in office it might be possible to exert more influence. It was dishonest to say that the children should be given this service when the service was not there to give.

Dr. FENTON pointed out that the first part of the motion had been covered by the previous motion, and the second part by the decision of the Council to set up a special committee to watch the matter. The motion was withdrawn.

Other Public Health Matters

Dr. FENTON, in presenting the remainder of the report, said the Askwith scale of salaries for public health officers, which was adopted in 1929, was now completely out of date. That was recognized by many local authorities, who were anxious to advertise appointments at above the scale. Salaries must be adjusted to modern values.

The Association was anxious to establish a national maternity service to serve the best interests of the mother and the child, and desired that every woman throughout pregnancy, during labour, and throughout the post-natal period should be under the care of her doctor and midwife, aided where necessary by a specialist and institutional service.

In paragraph 33 the policy of the Association was stated on equal pay for men and women. They felt that not only pay but also the cost-of-living bonus should be equal, because it was counted in fixing the rate of superannuation on retirement.

The Council were as satisfied as ever of the efficacy of vaccination, but believed that compulsion should be removed and that the parent should take the child to his own doctor for vaccination, as for other services. They believed that this would mean that a higher proportion of children would receive the protection so afforded.

Mr. ANTHONY GREEN (Guildford) moved:

> That the Minister be asked to request local authorities and like bodies to implement their statutory responsibility for the care of the chronic sick at the earliest possible moment.

This was carried.

The Askwith Memorandum

Dr. D. C. BARRON (Sheffield) moved:

> That negotiations with regard to salaries and conditions for doctors in the public health and municipal hospital services be conducted with the Government as part of the negotiations for the whole profession and not as on previous occasions with the associations of municipal corporations and county councils.

Scales of remuneration generally, he said, should be correlated throughout the profession. In any municipal corporation the highest-paid official was the town clerk, and after him the treasurer, and then came the medical officer of health, whose salary was conditioned by that of lay officials of his employing authority. All other salaries paid to medical men were scaled down from that of the medical officer of health, and were thus equally affected by the salaries of lay officials. No matter how big the hospital that the medical superintendent had to run, his salary was never so great as that of the medical officer of health, although he might have greater responsibilities. It was important that the junior members of the staffs of local authority hospitals should have their scale of remuneration related to the standards of the profession generally, and that could be done only if the same body negotiated for them all. The adoption of the procedure suggested would take the remuneration of public health officers out of the range of local political influence.

Dr. D. G. MORGAN (Cardiff), in supporting the motion, said it might be too late to discontinue the present negotiations with the representatives of local authorities, but future procedure should be along the lines suggested by Sheffield. The Rushcliffe scale for nurses was decided by a Government Committee, and not by negotiations between the nurses and the employing authorities, and the salaries of whole-time public health officers should be fixed in the same way.

Dr. FENTON said he was not sure that the motion was in the best interests of the public health officer. In the national health service the Government would be the employer, and it was right that negotiations should take place between the Government and the Association; but with public medical officers the employer was the local authority, who obtained the money from the rates, and it would be unwise to say that local authorities should have no voice in deciding what the salaries should be. He liked the idea of all salaries being "under one umbrella," and would like the motion referred to the Negotiating Committee for consideration, but he did not want the meeting to say that the local authorities, who provided the money, should be cut out of the negotiations on the salary scale. It would mean that the doctors would lose many friends.

Dr. W. E. DORNAN (Sheffield) asked the meeting not to adopt the course suggested by Dr. Fenton, and pointed out that when the Askwith scale was adopted local authorities employed far fewer men and women engaged in clinical medicine than they did at present, but the municipal officer had always enjoyed the highest salary, which was a dangerous precedent at a time when a great number of administrative posts were to be created. Some of the backward county councils had never even paid the Askwith scale. It would be better to have no truck with the local authorities if it could be avoided.

Dr. J. RIDDELL (Edinburgh) moved as an amendment that the Sheffield motion should end at the word "Government." The object was, he said, to strengthen and widen the purpose of the motion. There was a difficulty in making the negotiations part of the negotiations for the whole profession, because it had been said that the Spens Committee should not be urged to bring out their report quickly, but the Askwith scale would come to an end in March, 1946, and the Association should then have a substitute ready to be put into operation. The Scottish local authorities were often more recalcitrant than those in the south, and, therefore, negotiations should be conducted on as wide a basis as possible.

Dr. MAXWELL ADAMS (Lanarkshire), in supporting the motion, called attention to the fact that the salary offered for the position of medical officer of health of Glasgow, one of the highest executive positions in Scotland, was only £1,500. There was a danger, he said, that low salaries would lead to the appointment of doctors who would merely be "yes-men."

Mr. LAWRENCE ABEL (Marylebone) contended that it would be a mistake to weaken the resolution. Medical officers of health, in his view, should have the lowest scale of pay, and physicians and surgeons and specialists the highest; and that should be negotiated for the clinicians with the Government.

The Edinburgh amendment was lost.

Dr. BARRON, in reply, said the motion would not preclude the local authorities taking part in future negotiations; the outcome might be a fresh committee on the lines of the Askwith Committee, on which local authorities would be represented.

The motion was carried by a very large majority.

The Safety of Milk

Dr. HOWIE WOOD (Isle of Wight) moved:

> That this Annual Representative Meeting is of opinion that steps should be taken *immediately* to ensure that all milk supplied to children at school should be safe milk.

Members of his Division, he said, were definitely of opinion that cervical and abdominal adenitis, which they attributed to the tubercle bacillus, was largely on the increase in their area. Forty per cent. of all dairy cows slaughtered in this country were found to have tuberculous lesions, and a proportion varying from 2 to 21% of dairy cows, with an average of 7% over the whole country, secreted living tubercle bacilli in their milk. All the bulked milk supply coming into London contained virulent tubercle bacilli, often in large numbers. In Canada work by Price showed that of 300 tuberculous children under 14, 15% suffered from bovine tuberculosis, and every single one of them came from districts where pasteurization was not in operation, whereas in the city of Toronto, where pasteurization had been enforced since 1915, there was not a single case, in spite of the fact that 26% of the milk coming into the city contained living tubercle bacilli. The Association had given a grand lead on the question of infected milk, and doctors were preaching to their patients that they should not give their children milk which was not "T.T." or boiled; but the reply was, "What is the good of treating milk which we give to the children at home when they have unboiled milk at school?" The object of the motion was to see that some action was taken now to render safe the milk consumed by children in the schools.

Mr. **Lawrence Abel** (Marylebone) moved as an amendment the substitution of the words:

> That this meeting instructs the Council to insist that the Ministry of Health and the Ministry of Food shall secure legislation immediately requiring all milk for human consumption to be pasteurized.

Scotland was in a better position than England, he said, with regard to the infection in cattle, which on Scottish farms were usually not up to their udders in filth. The 1936 Order laid it down that all cows in this country were to be tuberculin-tested not less than once in six months, but in 1938, when he realized that war was coming, he bought a cow, and nobody had come to test it yet. London was fortunate in that 95% of its milk was pasteurized, but he was told that in Rugby, for example, nothing but raw milk was served, and in no town in the whole country was there 100% pasteurization of milk.

There had been outbreaks all over the country the germs of which could be transmitted by milk—streptococci, which caused outbreaks of sore throat, and the germs of typhoid, undulant fever, and, most important, tuberculosis. He had obtained some facts from one of the principal officials of the Ministry of Health. In the great majority of cases of bovine infection the disease occurred elsewhere than in the lungs, and bovine infection was responsible for nearly one-third such cases. In England and Wales in 1943 there were 4,000 deaths from non-pulmonary tuberculosis, so that some 1,200 deaths were due to bovine infection. In the same year there were 14,000 notifications of non-pulmonary tuberculosis, which meant 4,000 due to bovine infection. Half the deaths from non-pulmonary tuberculosis occurred in children under 14, which meant that 600 children in 1943 were killed by the lack of action by the Ministry of Health.

All over Europe courts of justice were being set up, and men were saying "J'accuse!" He accused the Ministry of having for the last thirty years murdered children in this country. Yet they were the people to whom the medical profession was asked to give up its freedom. Much had been said of the horrors of Belsen and other camps, but there were 1,200 little Belsens in the homes of England to-day, because the Ministry of Health "did not give a damn about the health of the people." His amendment used the word "insist." The Association should spend some money in indicting the Minister of Health at the Old Bailey for murder, and have a public hanging on the lampposts from the Old Bailey to B.M.A. House of ex-Ministers of Health and their permanent officials. They should break off negotiations with those who allowed 1,200 people a year to die because of their carelessness.

Dr. O. C. **Carter** (Bournemouth) said there had been an epidemic of typhoid in Bournemouth a few years ago due to the consumption of milk infected by typhoid bacillus; the milk was in circulation for only 36 hours, but it caused the death of 135 children and young adults. If that could be done in 36 hours it was obvious that the country ran an appalling risk when unpasteurized milk was in continual use. It also led to a considerable increase in abortus fever, which was difficult to treat. Dr. J. A. **Ireland** (Shrewsbury) remarked that the most striking commentary on the milk supply of this country was the fact that the United States Government did not permit the supply of British milk to any of their units or organizations over here.

The **Chairman of Council** suggested that the time had come when the Association should say that in its opinion the sale or distribution of unsafe milk should be made a criminal offence. If the responsibility for selling poison was put on the person who sold it, it was possible to deal with the position, and the vendor would soon see that the milk sent to him passed the test. Vendors were already prosecuted for selling milk with too much water in it, and it was a worse offence to sell milk with germs in it. It was the milk with which they were concerned—not the cows.

Mr. **Lawrence Abel**, in reply, expressed sympathy with the small farmer who had no opportunity of pasteurizing his own milk, but said that the Government could produce the necessary containers for the purpose, even if they had to melt down a few guns to do it. There had been a White Paper on milk, followed by Defence Regulation 55G, but that had never been implemented.

The amendment was carried with what the Chairman described as "a minimum of dissent."

Vaccination Fees

Dr. J. G. **Thwaites** (Sussex) asked the meeting to affirm that the fees paid to public vaccinators are still totally inadequate and to ask the Council to press for uniformity throughout the country; also that the scale of fees should be the same as has been formulated for the West Riding administrative area, accepted by the Yorkshire Branch Council of the B.M.A., and approved by the Ministry of Health (see *Supplement*, May 19, 1945, p. 94),[1] with the addition that such fees should be paid whether vaccination is successful or unsuccessful, and that a mileage charge of 2s. a mile per vaccination over two miles should be paid. He made it clear that the motion was intended to apply to Scotland as well as to England and Wales.

The motion was carried.

National Maternity Service

Mr. J. D. R. **Murray** (Exeter) moved:

> That those practitioners who have had extensive and lengthy practical experience in midwifery should *ipso facto* be eligible to sit for the diploma in obstetrics and gynaecology without the necessity of having held a resident post in midwifery, and that this suggestion be brought to the notice of the College.

The object of the motion, he said, was to safeguard the experienced country practitioner, who had learned his midwifery in the hard school of practice. Many such practitioners were regarded as obstetric consultants, and were recognized as such by the county medical officer of health for the county consultant obstetric service, but they feared that they might be put on one side in favour of younger men who had obtained the diploma in obstetrics and gynaecology, which did not exist in their day, and they were told that they would be eligible to sit for it only if they took a resident post in a recognized hospital. Dr. J. S. M. **Ord**, who supported the motion, said any proposal to keep practitioners out of any midwifery service in the future should be resisted. Dr. W. B. A. **Lewis** (Shropshire) said the Royal College of Obstetricians and Gynaecologists had stated that the midwifery of the country should be in the hands of specialists in the subject, which would mean that the general practitioner who had a large experience of domiciliary midwifery would, by the suggestions made, be entirely excluded from taking part in it.

The Exeter motion was carried.

Dr. R. **Forbes** (Hendon) moved:

> That this Representative Body is determined to pledge itself to resist the introduction of any new criteria of qualification in midwifery that would, if officially recognized, deprive any registered medical practitioner of the right to practise midwifery in a national service.

If it was true, he said, that the general practitioner was unable to provide proper service in ante-natal and post-natal care there must be something sadly wrong with the teaching in the medical schools, because a registered practitioner should be sufficiently equipped to accept responsibility for attendance on a pregnant woman. The national maternity service which this country required should provide a general practitioner service, a full nursing service, and a full specialist and hospital service. It was important not to overstate the case in such a way as to alarm women and cause them to fear becoming mothers. The general practitioner was well able to look after women during their pre- and post-natal periods, and, if he was in any difficulty, consultant services should be made available at the home of the patient or in a suitable hospital in the neighbourhood.

Dr. F. **Gray** (Wandsworth) said discussions had been arranged between the Council of the Association and the Council of the Royal College, and the first meeting had been held. While the fact that the Royal College had rushed into print was to be deplored, on both sides of the table they were actuated by the one motive of providing the best possible maternity service for the country. When the discussions were resumed and a full report of the present discussion was available, it would be possible to arrive at a solution satisfactory to both bodies.

This was a matter which concerned the whole country. The same newspaper—(the *Daily Mirror*) which after the special meeting in May came out with headlines "Butchers at the B.M.A." had now done worse, and said "Babies' lives at stake in the battle of doctors," and made the grossly improper insinuation that the Association was concerned with midwifery simply because it provided large

---

[1] The West Riding scale of fees is as follows:

In respect of births:		
Child entered on list of vaccination officer	2s.	0d.
Not entered on list but vaccinated	2s.	0d.
In respect of vaccination:		
Successful primary vaccination or re-vaccination at surgery or elsewhere	5s.	0d.
Successful primary vaccination or re-vaccination at home of person	10s.	0d.
Successful vaccination or re-vaccination of each additional person at the same time ..	7s.	6d.
Medical officers of institutions who are public vaccinators to those institutions—vaccinations and re-vaccinations	3s.	6d.

financial rewards. When engaged in discussions on such a matter they should not be subject to so gross a libel.

Dr. W. Livingstone (South Staffordshire), in supporting the motion, said that if the Royal College thought that the standard of midwifery was not so high as it should be, they should see that the standard at the universities was raised. One reason for the present maternal mortality was the complete lack of liaison between those who saw the patient at the ante-natal clinic and the midwife and doctor who conducted the confinement.

The Chairman of Council pointed out that the *Daily Mirror* had made an entirely unjustified accusation against the Association, and had, moreover, made it in advance of the discussion that day. It was not possible to prevent things of that kind; the Press were invited to attend the meeting; but they did expect, and they usually obtained, fair play. The *Mirror,* however, had for a long time gone out of its way to poison the minds of the public against doctors as a class. Why, he did not know; but he gathered from its performances in other fields that something sensational was essential to its success. They very much appreciated the way in which the Press as a whole, however, dealt with their business.

Dr. Maxwell Adams (Lanarkshire) said that in Scotland the Scottish Maternity Act of 1935 was giving very good results, and maternal mortality and morbidity had been very much reduced in consequence. The general practitioner of experience was well able to cope with any maternity case. At present a great many women went into hospital for their confinement, but that tendency would be reduced when the housing problem was solved.

Dr. H. S. Pasmore (Kensington), while supporting the motion, said that one reason why the Royal College had suggested a new criterion of qualification was that the specialist and consultant saw the mistakes of the general practitioner. An obvious remedy was to provide easier access to the specialist. It was impossible for a newly qualified doctor to be competent to carry out difficult maternity work, and the young practitioner should be able to call on consultants and specialists more easily.

Dr. J. A. Brown (Birmingham) remarked that an attempt was being made to accuse the general practitioner of being the cause of maternal mortality, but the report of the Royal College itself showed where the blame really lay, for it said that poverty, with its accompanying deficient nutrition, bad housing, and overcrowding, contributed greatly to stillbirth and neonatal mortality. The accusation should really be directed against the Government, which allowed slums to continue and nutrition to be at such a low level.

The motion was carried unanimously.

Dr. R. W. McConnel (Buckinghamshire) moved: "That all ante-natal examinations should be carried out by the doctor who is eventually responsible at the confinement." Dr. J. S. M. Ord (Glasgow) considered this to be impracticable. He could not see how it was to be known what doctor would ultimately be responsible for the confinement, for the doctor who had done the ante-natal work might be ill or away at the time. Dr. C. B. Byrd (Westmorland) also considered it impracticable, especially in a country district like his own, where the nearest hospital or nursing home was many miles away. Dr. J. C. A. Norman (Bournemouth) hoped the motion would be supported. There were certain medical men who attended confinements but did no ante-natal examination. No man who refrained from ante-natal examination ought to be allowed to attend any woman at childbirth. This was a motion for the protection of the mother. Of the large number of women who came up from the various ante-natal centres some 20 or 30% had a quite incorrect prognosis, for the reason that these cases were not seen to their ultimate conclusion by the person who carried out the ante-natal examination. It was a great disadvantage to any man to be called in at the last minute when he had not seen the case ante-natally.

Dr. J. C. Arthur (Gateshead) said that none of them would cavil at the spirit of this motion, though certain practical difficulties might be involved in carrying it out to the letter. He proposed the insertion of the words "as far as possible."

With this amendment the motion was agreed to.

Dr. G. Priestman (Bradford) moved:

> That this meeting approves generally the principle instituted by and the policy pursued by the Council according to the Report, and is particularly emphatic in agreeing with para. 32. It also draws attention to and deplores the views expressed in the Nuffield Hospital Report for Yorkshire on page 90, where "continuous compulsory supervision of children" by a small group of medical men is advocated, and on page 95, where the removal of mothers and children from family general practitioner attendance is advocated, and draws the attention of Council thereto.

He said that the report to which the motion drew attention recommended that these children, possibly with their mothers, should be provided for by a special children's medical service. There would be in each region a group of medical men and women who would confine themselves to work for children. This would mean a further dismemberment of general practice. Where did the conception of the family doctor come in if the supervision of children were taken away from his practice? What doctor, given the time and freedom from financial considerations, would not be willing to look after the children in health as well as in sickness, and what doctor worthy of the name was not interested in children and their diseases? Here was an attempt to set up a large new body of specialists. Dr. W. S. Macdonald (Leeds) hoped this resolution would not be accepted. This report was the work of one individual, and was undertaken for a specific purpose and for one region. The words quoted in the resolution were not in harmony with the general spirit of the report, which was a very useful document. Dr. Fenton suggested that it was not for other parts of the country to intervene in a difference between Leeds and Bradford.

It was agreed to refer the matter to the Council.

Equal Pay and Cost-of-living Bonus

Dr. S. Noy Scott (Plymouth) moved:

> That the B.M.A. reaffirms the policy that men and women medical practitioners shall receive equal pay for equal work; that it shall be understood that this policy shall include cost-of-living bonus; that where authorities or other bodies have not paid the same cost-of-living bonus to women as to men they should take immediate steps to rectify the position, and that such rectification should be retrospective.

No cogent argument, he said, had been produced for the cost-of-living bonus being greater for men than for women. The cost-of-living bonus was frequently incorporated in the salary, and once that was done pensions and rates of remuneration would become larger for men than for women. Some authorities were giving an equal cost-of-living bonus, but one of the biggest offenders was the L.C.C. The motion had the support of the Medical Women's Federation. Dr. Mona Macnaughton (Newcastle-upon-Tyne) supported the motion, and emphasized the fact that a different cost-of-living bonus would mean different pension rates, although at the time of retirement the needs of men and women were very similar. Dr. J. A. Gorsky (Westminster and Holborn), who also supported the motion, pointed out that all men, married or single, received a larger cost-of-living bonus, but costs for single men and single women were the same, and especially when both were doctors their overheads were exactly the same. Moreover, a high percentage of women over the age of 25 had dependants.

Dr. N. E. Waterfield (Council) recalled that when the Royal Commission on Equal Pay for Men and Women asked the Association to give evidence, a committee was set up by the Council and came to a definite decision in favour of equal pay, and it was pointed out at the time that there was no justification for a differentiation in the cost-of-living bonus.

Dr. W. N. Leak (Mid-Cheshire) pointed out that the matter was not so simple as it seemed, and that equal money rates and equal standards of living were two different things. If one asked for equal standards of living for all people doing the same job, it was an invitation to employers to employ those with small responsibilities; but to ask for equal cash payments was to condemn those who had the highest responsibilities to a lower standard of living, and that was at the basis of such evils as late marriage and the declining birth rate.

The motion was carried unanimously.

Dr. Elsie Warren (Kensington) moved that the pensionable age for medical women should be the same as that for medical men. There was, she said, need for more practising doctors, and one way of getting them was to expect medical women to go on working for as many years as the men. A woman's expectation of life was longer than a man's, and at a given age she tended to be less worn out than her twin brother, and so should not be pensioned at an earlier age. Moreover, a man patient seemed to prefer a woman doctor like his mother to one like his daughter.

Dr. Janet Aitken (Council) supported the motion.

Dr. H. H. D. Sutherland (Kensington) pointed out that since the medical woman qualified at much the same age as the medical man, to qualify for an equal pension their pensionable age should be the same.

The motion was carried.

Dr. H. S. Brown (Morpeth) formally moved that the Council be instructed to approach the appropriate authorities—e.g., the local authorities and Government Departments—to ask that the cost-of-living bonus be given to pensioners formerly employed by them, and this was carried.

National Health Service

The Chairman of Council was asked what action the Negotiating Committee had taken to implement the resolution passed by the Representative Body in December, 1944, to the effect that the National Health Insurance scheme should be completed by the organization of full hospital, *x*-ray, consultant, and auxiliary services, and that when these were available the scheme should be extended to dependants. He said that that was the principle behind all their efforts. The question of how it should come into operation had not yet been reached, and a different problem might have to be faced as a result of the General Election.

Collaboration with Other Bodies

Dr. A. S. Wigfield (East Herts) moved:

> That the Council be requested to consider every possible means of instituting collaboration between the Association and all medical bodies producing reports concerning the nation's health before such reports are published.

The resolution, he said, arose from the fact that the Royal College of Obstetricians and Gynaecologists had made a recommendation which was in direct conflict with the policy of the Association. It was understood that as a result of consultation modifications might be made which would bring the report of the Royal College more into line with the Association's policy, but such consultation should have taken place before rather than after the publication of the report. In intraprofessional matters differences of opinion which were made public might have an unfortunate effect. The Chairman of Council, while stating that the efforts of the Association were in the direction indicated, pointed out that it had no power over other bodies, so that everything depended on the willingness of those bodies to work together. The Negotiating Committee included representatives of all the chief forms of medical organization, and it would be proper for those bodies to submit any report to the committee before publication; but it was difficult to deal with them if they would not.

The motion was carried.

Conduct of Business at B.M.A. Conferences

Dr. A. Beauchamp (Birmingham) moved that Council be instructed to investigate the desirability of appointing a Speaker and Deputy Speaker in place of the Chairman and Deputy Chairman of the Representative Body to take charge of all conferences held under the aegis of the B.M.A. A practice had grown up, he said, for the chairmanship of the Representative Body to be regarded as a stepping-stone to chairmanship of the Council, but it did not follow that a good chairman of the one would be equally successful as chairman of the other, and the Representative Body might not wish to lose a good chairman. Moreover, the Chairman of the Representative Body was *ex officio* a member of the Council and the Standing Committees, and if a man was in at the initial stages of the formation of policy he would have an unintentional bias in favour of that policy. His Division used the word "Speaker" to emphasize the analogy with the Speaker of the House of Commons. In saying "all conferences" they would include the Panel Conference.

Dr. J. A. Ireland (Shropshire) said that no change apart from the name seemed to be involved by the proposal. Men of weight in the councils of the Association were appointed to the chairmanship and vice-chairmanship of the Representative Body, and could not be forbidden to take part in the conduct of the affairs of the Association. They had never shown the slightest signs of bias. (Applause.)

Dr. A. Talbot Rogers (Bromley) pointed out that the Panel Conference, which represented all insurance practitioners whether members of the Association or not, would jealously guard its rights to choose its own chairman.

The Birmingham motion was lost by a very large majority.

Dr. C. E. Cobb (Aldershot) asked that something should be done by rearranging the platform to afford better facilities for debate at Representative Meetings. Speakers who came to the back of the platform to await their turn could not hear what was said or judge its effect on the meeting. He suggested that the platform should be moved further back and seats placed at the side for intending speakers.

The Chairman of Council promised that the matter would receive consideration, and said that new loud-speaker apparatus would be installed as soon as it could be obtained.

The following motion was on the agenda in the name of Reading: "That as long as the Annual Representative Meeting is conducted solely through the Chair, this Division does not think it worth while sending representatives to it." Later a notice was given that Reading desired to amend its motion to read:

> That so long as Representative Meetings are conducted through the Chairman of Council, by consent of the Chair, even to the extent of disregarding standing orders, this Division considers that undue weight will be given to the views of the Chairman of Council, and that any views unacceptable to him will receive scant consideration.

A letter was now read from the Reading Division asking permission to withdraw the motion.

The Chairman of Council said that he hoped the meeting would not allow this motion to be withdrawn. He was not concerned with his personal reputation in this matter, but he was jealous that the business of the meeting should always be carried on properly, and if in any sense their arrangements were defective he would be the first to agree to remedial action. The meeting was not conducted through the Chairman of Council. The Council did its business through standing committees, and each chairman of such committees presented the appropriate part of the report to the Representative Body. But there had been two Special Representative Meetings solely concerned with the business of the Negotiating Committee, and as chairman of that committee he had had to present the whole of the business. That was an accident of the occasion. If anybody was dissatisfied with that method and could suggest a better they would be very glad to hear of it. There had been a number of letters in the *Supplement* suggesting that the Chairman of Council had some unwholesome influence over this body, and that the action which he had taken was such as to prevent good representatives ever coming to the meeting again. This was a most serious charge, and if it was supported something serious must be done to cure it. The answer might be that the people who were offended by the action of that body were just being childish because they could not get their own way. ("Hear, hear.")

The meeting by an almost unanimous vote refused to allow Reading to withdraw its motion.

The representative for Reading at first declined the Chairman's invitation to move it, and the Chairman of Council asked if Reading was running away from its own proposal.

Dr. D. H. S. Boyd (Reading) then came forward and said that the letter from the Division was written on July 23, before the meeting opened, and he thought that anything withdrawn before the meeting should not be brought forward. The Secretary explained that the motion had been considered by the Agenda Committee before the letter of withdrawal was received, and thus it became part of the business of the meeting, and could be withdrawn only with the meeting's permission.

Dr. R. W. Cockshut said that the results of the General Election which had been declared during the day made it all the more necessary that the Association should be consolidated. All this business should now be regarded as over, facing as they did the threat of a Government pledged to bring in a State-salaried service. All the unity they could muster would be needed.

The Chairman read a letter which he had received from Dr. Balcke-Foote, saying how sorry he was to see from the Chairman's letter in the *Supplement* of July 21 that his (Dr. Foote's) letter was construed as a personal attack on himself and on Dr. Dain. It was the system which he was concerned with and not the personalities of those who ran it. He had never doubted the impartiality of the Chairman, nor the sincerity of Dr. Dain. The Chairman said that he thought it only fair to Dr. Balcke-Foot to read the letter, but, of course, there was no personal attack.

Dr. Maxwell Adams said that those who had signed the letter in the *Supplement* criticizing the Chairman of Council ought to have the courage to come forward and state their views. He was one of those who thought the Chairman of Council took too much into his own hands; but he was making no accusation against him: his accusation was against the representatives who allowed him to have his own way.

Mr. Dickson Wright (Marylebone) said that he was one of those who signed the letter, and he did not wish to withdraw anything. This Representative Body had been described to him as the Parliament of the medical profession. In this controversial time when they saw the profession drifting into bondage they did right to feel agitated. The "opposition" in the body of the meeting felt at a disadvantage as against the platform, that the scales were weighted against them.

Dr. Stanley Hodgson (Salford) said that a good many members of the Representative Body brought forward motions with very scant knowledge of the facts, and they really depended upon such men as Dr. Dain to keep them properly informed. In Salford they felt it disgusting that a number of members should sign such a letter. They were only too thankful to have a man of Dr. Dain's calibre to assist them. Dr. Lucas Young (Eastbourne) deplored the number of motions which were referred for consideration by the Council; time should be given for them to be fully discussed. Dr. E. T. Wright (Marylebone) spoke to the same effect.

The **CHAIRMAN OF COUNCIL**, who was received with general applause, said that it was very important at the moment not to have differences of opinion on things that mattered. As for the agenda, if representatives were prepared to go on day after day until the agenda was finished, well and good, but it was the general feeling that, owing to various considerations, especially in wartime, some limit should be placed upon the length of the meeting. As for its decisions, they were decisions of the meeting, and it was not fair for a member of that body afterwards to say that the representatives voted for something because the platform wanted them to do so. He had much greater respect for the Representative Body, of which he had been a member for 26 years, than to suppose that they would vote for anything other than they wanted. To accuse him of pushing a State medical service was ridiculous. He was chairman of a committee which was negotiating the form which a medical service might take, but he did not want a State medical service; it was a most unfair charge to make against him. On the more general question, it had always been open to anyone who held views which were not the same as those of the Council to ventilate them freely. He complained of the suggestions conveyed in letters in the *Supplement* which gave the impression to the outside world that things were not being properly done in their own Parliament. (Applause.)

Dr. H. S. **GABB** (Hastings) said that many Divisions were perplexed because decisions made last December were reversed in May. When his Division wanted to know why this had happened he could only say that the reversal was due to the great ability of the Chairman of Council.

Dr. **BOYD** (Reading), replying, commented on the number of speakers who had urged reform of one kind or another, which suggested that things were not quite as they should be.

The Reading motion was lost by an overwhelming majority.

NAVAL AND MILITARY

Col. A. H. **PROCTOR** (chairman, Naval and Military Committee), in presenting the report under that heading, said that an answer had been received from the Treasury on two points mentioned in that report. The first question was: Will a medical officer who is released at the instigation of the Central Medical War Committee on grounds of civil needs be entitled to either the release leave of 56 days or to the foreign service leave, or both? The answer was that special release officers, released on the grounds of national service, were divided into two classes: (1) those who were released prior to the reallocation scheme coming into force, and (2) those released after the scheme. The former got no leave on release, but would receive a grant in lieu of foreign service leave which they might have earned. The latter were treated as Class B releases and were subject to the conditions laid down in those releases—that is, they would receive 21 days' leave and at the end of the war a grant in lieu of their foreign service leave which they might have earned. The Royal Navy differed inasmuch as they received foreign service leave. The release leave of 56 days for officers in the Forces was granted only to those in Class A. The second question was: Will a medical officer be entitled to receive, if he so wishes, the outfit allowance of £12 in lieu of the outfit? Here a differentiation was made between men and women. Men would have to take the clothing outfit; women, if they wished, would be given a grant of £12 in lieu of it. A money grant in lieu of clothing had been made to a few officers who took their discharge over-seas. A disability pension was exempt from income tax.

Postgraduate Study for Demobilized Practitioners

Dr. J. A. **GORSKY** (Westminster and Holborn) moved:

> That this meeting considers that the present decision whereby a Service medical officer previously engaged in general practice is being offered on demobilization a two-weeks refresher course during which time he is offered subsistence allowance and a small sum per week for the provision of a locumtenent is totally inadequate, and that a period of at least two months should be allowed during which time adequate financial arrangements should be provided.

He said that he had been asked by many serving members of his Division, some of whom had been out to the East and had just returned to jobs where they were at the moment stagnating, to put forward this motion. They considered that two weeks' postgraduate study was not sufficient. Some of the reasons they had given him were as follows. Medical officers of the Services were dealing essentially with the age groups 20 to 45, which normally gave rise to the least illness in general practice. The members of those groups were selected people, essentially sound, and, therefore, the amount of illness in them was not the same as in general practice among corresponding age groups. Most of the serving officers of the male sex had had little or nothing to do with female patients, who were looked after by women Service medical officers. Most of these officers had never attended a confinement since 1939, nor had the opportunity of doing any ante-natal or post-natal work. They had also had little opportunity to attend clinical meetings, and their experience of war wounds and injuries, field hygiene, mass inoculation, etc., had very little bearing on general practice.

Dr. W. N. **LEAK** (Mid-Cheshire) supported the motion. Anyone who served in the Army knew how rusty they got. There should be some period of re-education. The only objection was from the Treasury. But there was no possible expenditure of money by the Government which would yield greater dividends than to make sure that a whole generation of practitioners returning from the Forces were given the best possible chance of rehabilitating themselves.

The motion was carried.

The Demobilization Scheme

Dr. W. M. **KNOX** (Glasgow) moved a resolution which, combined with one from Brighton and an amendment from North Staffs, read as follows:

> That this meeting is dissatisfied with the operation of the present demobilization scheme, and in view of the urgent need for medical practitioners in civilian practice, urges that pressure be brought on the Services to release more doctors at an early date.

The President of the Association, in his address from the chair the previous day, had given a hint of the difficulties and troubles likely to arise on demobilization. There was a feeling of dissatisfaction, not so much with what was being done as with the uncertainty of the future. It was in the minds of the chairman and secretary of the Central Medical War Committee that some more vigorous method of demobilization should be inaugurated. During the last six years, fortunately, there had been no major epidemics, but there was no guarantee that this winter would not produce one, and at the present stage, when the medical profession in this country was getting older and tired and had had no replacement of any description, it was absolutely necessary that immediate steps be taken. The Forces in Europe might now be regarded as on a peacetime basis; their sickness rate should be much less, as they were a fit body of men, and therefore there seemed to be no reason why their proportion of medical man-power should be higher than that of the civilian population. There was nothing to be criticized in Group A demobilization, which went by age and length of service, but the difficulty arose in the Group B class, where they were not actually demobilized but released. One of the things that concerned them was the question of replacement. It was stated that very few would be released in the Group B category, and that releases would take place only if replacements were available. There must be no further call on recruitment from general practice, which was already sufficiently depleted. During the period of recruitment, especially in the last year, they had been hard pushed by the Services to supply medical men. They had been forced, so far as general practice was concerned, to give up very valuable men, men from 35 to 40 years of age. These men had been recruited, but naturally they had been credited with a very short period of service, and therefore their time of release was at a late date. Their reason for not entering the Forces earlier was because they had been retained by Local Medical War Committees earlier on account of civilian needs. It was on those grounds that an assurance was sought that there was some definite agreement with the Services for release.

Dr. W. N. **MAPLE** (Brighton) said that these doctors could be demobilized from the Services rather more quickly. They were all conscious that the civilian population was not getting all the medical attention it ought to have, and that most civilian doctors, after five years of overwork, were getting very tired. It might be argued that, however well they might be able to judge civilian needs, they were not in a position to judge Service needs, and that was very probably true; but a case could be made out for suggesting that the Services were over-doctored. He mentioned one or two cases in point.

The motion expressing dissatisfaction with the operation of the present demobilization scheme was carried.

Dr. A. **BEAUCHAMP** (Birmingham) moved: "That in order to facilitate the return of practitioners Council be instructed to take steps forthwith to prevent the requisitioning of the houses of absentee doctors, or alternatively to ensure that if the premises are requisitioned they shall be released in adequate time for the return of the absentee practitioners." He quoted an instance. Last Wednesday a practitioner was demobilized, and went to see an official of the local authority, who said, "You are just in time. Another three weeks later and your house would have been requisitioned."

Dr. J. A. Brown (Birmingham) supported. He said that in some cases the doctors had been got back, and there was no opportunity for them to do their work because their houses could not be derequisitioned.

This motion also was carried.

Dr. A. Talbot Rogers (Bromley) drew attention to the state of affairs in his own Division. They were grossly short of doctors, one of the reasons being that they had contributed their quota of doctors from general practice at a time when the population of the area, based on the number of food cards issued, was at its lowest, owing to bombing and evacuation. Since then the population had come flooding back, but there were no more doctors; indeed, there were fewer.

The Chairman of Council said it was not so much that they were dissatisfied with the present demobilization scheme, as that they were unable to find out what it was. They had failed to obtain information from the Services as to what groups were likely to be demobilized at certain dates. But now two at least of the Services had reacted to the popular expression of opinion as given in the Press the previous week (following upon a press conference at the B.M.A.). It was said now that by the end of August the first eleven groups in the Army would be demobilized, and he believed that these included over 1,000 doctors. The matter was being very actively pursued. He had hopes that 5,000 would be demobilized by Christmas.

Dr. O. C. Carter asked whether the Medical Personnel Priority Committee still functioned, and if it had scrutinized recently the medical establishment of the Services.

The Secretary said that an emergency meeting of the Services Committee had been held that morning, and the Minister of Health was being asked to arrange for an early meeting of the Priority Committee.

Col. Proctor said that it was a misdescription of the present scheme to call it a demobilization scheme; it was a reallocation scheme—a reallocation of personnel as between the Services and the civil community. There were certain difficulties about reductions in staffs. In this country casualties had been dealt with in E.M.S. hospitals. On the Japanese front the Army had had to establish general hospitals where formerly it had E.M.S. hospitals, and this had meant a much greater demand for specialists. The demand in the Navy for medical officers also was much greater now than at any stage in the war. The Army had a large number of officers who had done their tour of foreign service and were in this country; these men were not, under present conditions, to be sent abroad again. They could be reallocated to civil employment, but special rules for demobilization or reallocation would have to be brought out for the medical profession. A quota had been laid down which could not be exceeded for the special releases. The medical services in the Army were only allowed to grant special releases at a certain percentage of Group A. The present position was that the Army was very short of medical officers to send over-seas and was dependent entirely on the men now being recruited. This looked like continuing until the end of the Japanese War. It was probable that the age limit would have to be raised rather than lowered to get the requisite number of men. The difficulties were very great because of their repercussions on other professions and callings.

Dr. W. E. Dornan (Sheffield) asked that steps should be taken by the Association, using the machinery of the Branches and Divisions and all other possible means, to ascertain what numbers of medical practitioners could rapidly be absorbed into civilian work as demobilization proceeded. He urged that the time lag between demobilization and re-employment should be as short as possible. Any large unemployed body of medical men demobilized from the Services would be a very serious problem.

The Chairman of Council said that the needs in civil life in all departments were so urgent that 10,000 men could easily be absorbed without looking round, and there need be no fear of a pocket of medical unemployment. An information bureau had been established at headquarters, and they were prepared to advise any demobilized officer.

Dr. R. W. McConnel (Buckinghamshire) suggested that a list of elderly practitioners intending to retire be compiled by the Central Medical War Committee; but the Chairman of Council said that that was a job for very special people familiar with detail, and he did not see any reason why the Association should undertake the work of agencies.

The Sheffield motion calling for the use of Association machinery for the ascertainment of the numbers which could be absorbed into civilian work was carried.

Dr. P. Phillips (Bristol) moved that if it was necessary to call up further age groups of doctors from civilian practice it would be advantageous for all concerned to do this from the 40–55 age groups. Many of them who were past their half-century felt that they could replace some of the younger people.

This motion was lost. The report under "Naval and Military" was approved.

Other Reports

Mr. Zachary Cope moved the report of Council under "Patent Law" and briefly summarized the position as there set out (see *Supplement*, May 12).

Dr. N. E. Waterfield presented the paragraph under "Medical Ethics," remarking that there had been peace in the ethical world during the year.

The Chairman moved the report under "Oversea Branches."

Dr. G. MacFeat presented the report under "Scotland," describing the two successful Scottish Conferences, the discussions on the White Paper, the new liaison with the British Hospitals Association, the activities of the Highland and Islands Medical Service, and the operation of the Maternity Services (Scotland) Act.

All these portions of the Council's report were approved.

Votes of Thanks

The Chairman expressed the thanks of the meeting to the secretarial and clerical staff of the Association, also to the catering staff for what they had done to promote the success and comfort of the meeting. He further referred to the work of Dr. Craig, the retiring Scottish Secretary, and said how greatly the Association valued his services.

Dr. Talbot Rogers moved a vote of thanks to the retiring Chairman, Dr. Peter Macdonald, not only for the way in which he had handled that meeting, but for all that he had done during the last three crowded years—perhaps the most crowded three years in the Association's history. He had presided over three Annual and three Special Representative Meetings, and had done it with patience, understanding, good humour, and justice.

The vote of thanks was carried, the representatives rising and applauding.

Dr. Macdonald said that he had come to the end of his tenure of office with regret. He expressed his gratitude for the co-operation and courtesy extended to him by the members of the Representative Body and for the help of the Deputy Chairman, Dr. J. B. Miller, whom he then invested with the badge of office and inducted into the chair.

Dr. Miller's first act was to declare the meeting at an end (at 5 p.m.).

BRITISH MEDICAL ASSOCIATION

Areas of Aldershot and Basingstoke, and Winchester Divisions

Notice is hereby given by the Council of the Association that as from the date of this notice the Civil Parish of St. Mary Bourne is transferred from the area of the Aldershot and Basingstoke Division to the area of the Winchester Division.

Charles Hill,
Aug. 4, 1945. *Secretary.*

H.M. Forces Appointments

ROYAL AIR FORCE

Royal Air Force Volunteer Reserve

The notification concerning B. Plowright in a *Supplement* to the *London Gazette* dated June 29, and in the *Supplement* to the *Journal* of July 21, p. 14, should have read O. Plowright.

To be Flying Officers (Emergency): C. C. Dawson and M. Hutchinson.

POSTGRADUATE NEWS

The Fellowship of Medicine announces the following course in preparation for the Primary F.R.C.S. examination: Lecture-demonstrations in anatomy, physiology, pathology, and bacteriology on Mon., Wed., and Fri., Aug. 13 to Oct. 15. Two lectures each day at 6 p.m. and 7.15 p.m. Detailed syllabus obtainable from the Fellowship of Medicine, 1, Wimpole Street, W.

WEEKLY POSTGRADUATE DIARY

Edinburgh Postgraduate Lectures.—At Edinburgh Royal Infirmary, *Thurs.*, 4.30 p.m., Dr. Cranston Low: Molluscum Contagiosum.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTH

Foster.—On June 10, 1945, at Prospect, Bermuda, to Stella (*née* Stannard), wife of Temp. Major G. E. Foster, R.A.M.C., a son—Anthony Elwood.

MARRIAGE

Lankester—Burnett.—On July 21, 1945, at Leicester, Major John H, Lankester, R.A.M.C., of Oxted, Surrey, to Mary, only daughter of Col. T. W. Burnett, U.S.A.M.C., and Mrs. Burnett, of New York City.

DEATHS

Babington.—On June 29, 1945, Gilbert Cleary Babington, M.D., M.R.C.P.Lond., D.C.H., Lieut.-Col., R.A.M.C., of 37, The Fossé, Leicester, died in India, aged 39 years.

Rose.—On July 23, 1945, at his residence in London, Andrew Rose, M.B., C.M., passed peacefully away.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY AUGUST 11 1945

PROCEEDINGS OF COUNCIL

A meeting of the Council of the Association, preceding the Annual Representative Meeting, was held on July 24, under the chairmanship of Dr. H. Guy Dain.

The deaths of four former members of Council—Dr. Thomas Beattie, Dr. H. C. Bristowe, Dr. William Clow, and Mr. N. Bishop Harman—were reported, and the Chairman referred in particular to the great services of Mr. Bishop Harman to the Association and said how much they would miss his presence.

A letter was read from the Federal Council of B.M.A. in Australia placing on record its appreciation of the services rendered to the British Medical Association by the late Viscount Dawson of Penn.

The congratulations of the Council were conveyed to 22 members of the Association whose names were in the recent Birthday Honours list.

The Spens Committee

Dr. E. A. Gregg, reporting for the Insurance Acts and General Practice Committees jointly, said that the Spens Committee had devoted its meeting on July 12 and 13 to the consideration of evidence, written and oral, from the Association. It was understood that further opportunity would be given to the Association's witnesses. The principal witnesses for the Association, led by the Chairman of Council, numbered five, and ten other practitioners had been nominated to give evidence on special conditions of general medical practice in different types of area.

Reference of Patients to Tuberculosis Officer

Dr. Gregg, as chairman of the Insurance Acts Committee, brought forward the circular letter issued by the Ministry on June 4, suggesting that the Divisional Medical Officer, when an insured person was referred to him for independent medical examination, and a tuberculous condition was diagnosed or suspected, should refer him direct to the tuberculosis officer of the area. Dr. Gregg said that the strongest possible exception was to be taken to this procedure. The duty of the Divisional Medical Officer, when he diagnosed or suspected tuberculosis, was to suggest in the report sent back to the practitioner that he should seek the assistance of the tuberculosis officer. Only if, after sufficient opportunity had been given to the practitioner to take action, no steps had in fact been taken, would there be a case for proceeding further. A very important question of principle was involved. The point was one which might affect every practitioner in the country, insurance or other.

Dr. Peter Macdonald, Dr. F. Gray, and Dr. N. E. Waterfield spoke in deprecation of the Ministry circular, and the Council endorsed unanimously the instruction of the Insurance Acts Committee to its chairman to oppose in the strongest possible manner the suggested proposal.

Protection of Practices

A report was made by the Protection of Practices Committee, stating, *inter alia*, that a survey of work done by Local Medical War Committees in protecting the practices of absentee practitioners was to be prepared, and a questionary would shortly be issued to such practitioners throughout the country.

Dr. Gregg said that under the protection of practices arrangements it was useless for anybody to look for a perfectly running machine that would solve every problem. It was necessary to rely on a very large measure of good will, tolerance, and helpfulness.

Advertisements of Permanent Appointments

Mr. R. L. Newell presented a report of the Hospitals Committee. The committee, he said, had gone very fully into the question of permanent appointments. It was their strong feeling that nothing must be allowed to jeopardize the future of the men serving in the Forces. He moved a series of recommendations, all of which were agreed to as follows:

> That advertisements of permanent medical appointments which do not invite applications from practitioners serving in H.M. Forces and allow at least four months for the receipt of applications be refused publication in the *British Medical Journal* and that the reasons for such refusal be explained to the employing authorities concerned.
>
> That in the event of an employing authority declining to amend an advertisement of a permanent medical appointment in conformity with the policy of the Association, the appointment in question be included in the "Important Notice" in the *British Medical Journal.*
>
> That in the event of an advertisement of a permanent medical appointment the wording of which conflicts with the policy of the Association being published in a newspaper, an announcement in the form of the "Important Notice" be inserted in the same newspaper.
>
> That the policy of the Association in regard to advertisements of permanent medical appointments at the present time, as recently explained to hospital authorities, be communicated to employing authorities generally.

A National Maternity Service

It was reported that representatives of the Association, headed by the Chairman of Council, had met representatives of the Royal College of Obstetricians and Gynaecologists on the question of a national maternity service and in particular on the role of the general practitioner with regard to obstetrics. A provisional agreement had been reached on the following statement, and a further meeting was to be held after each body had considered it:

> (1) After qualification a practitioner needs adequate and regular experience in obstetrics to be a good obstetrician.
>
> (2) Midwifery standards should be raised by (*a*) the inclusion of a resident midwifery post in the pre-registration compulsory hospital posts as proposed by the Goodenough Committee; (*b*) creating an increased number of resident obstetric hospital posts available to recently registered practitioners; (*c*) the organization of the proposed comprehensive medical service so as to secure for each pregnant woman a general practitioner, a midwife, and, where necessary, an obstetric specialist; (*d*) the recognition for the purposes of the future service of those general practitioners who desire to undertake obstetrics, provided that they undertake sufficient midwifery to enable them to remain efficient."

Dr. Cockshut referred to the position of the practitioner who had done a good deal of midwifery in his time, but for certain reasons did not want to go on doing it to the same extent, although he remained very competent to do so. He suggested that a proviso should be inserted in the report that nothing should be done to interfere with the right of any woman to engage any doctor she wished.

The Chairman pointed out that note would be taken of this and other suggestions, but the Council could not alter the agreed report.

Dr. James Fenton, who had attended the conference with the College, said that it was made plain that one of the first planks in the Association platform was that a registered medical practitioner was qualified to practise medicine, surgery, and midwifery.

Other Committees

Reports were made by the Chairman on the work of the Public Relations Committee and the Parliamentary Elections Committee, and by Dr. R. G. Gordon on the Care of Children Committee. Mr. Zachary Cope, for the Science Committee, proposed, and it was agreed, that for the ensuing year no Association grants be awarded, in view of the difficulty of allocating them, but that the number of Association scholarships be increased for the present from five to six, two of the value of £200 each, and four of the value of £150 each, to be awarded for the nine-months period from January 1 next, subject to renewal for a further period of one or two years at the discretion of the Council. It was agreed that special measures be taken through the various Service departments to make the scholarships known to members of H.M. Forces.

The finance of the Association for the first four months of this year was presented by the Treasurer and the report adopted.

Professor Picken

The Chairman said that members of Council would be grieved to hear that Prof. Picken, in view of his appointment as Acting Provost of the Welsh National School of Medicine, was resigning from the Council and from the various committees of which he was a member in virtue of his membership of the Council, including the Central Medical War Committee. Prof. Picken was doing this very regretfully, but he found it impossible to continue with his new office the frequent visits to London which the work of the B.M.A. entailed. He thought the Council would desire to express to Prof. Picken their very great regret at this severance, both on personal grounds and on the ground of the value of his contributions to their discussions. ("Hear, hear.")

Dr. Peter Macdonald testified to the value of Prof. Picken's work on the Central Medical War Committee, and Dr. R. W. Cockshut described Prof. Picken as one of the finest chairmen under whom he had ever sat, a man of superlative honesty and always ready to listen to and understand any point of view.

The Council placed on record its great regret at Prof. Picken's resignation and its appreciation of his outstanding services.

The Council held another brief and formal meeting at the close of the Representative Meeting on July 26. New members of Council were introduced and took their seats, and the sole business was the election of Council members to the standing committees, and the continuance, in some cases with slight changes of personnel, of those special committees which have not discharged their reference. A new special committee was appointed by the Council for the consideration of the treatment of school children under Sect. 48 (3) of the Education Act, 1944.

ANNUAL GENERAL MEETING

The Annual General Meeting of the British Medical Association was held in the Great Hall, Tavistock Square, London, on Wednesday, July 25, 1945. Dr. H. GUY DAIN, Chairman of Council, presided over the first part of the proceedings.

The SECRETARY read the notice convening the meeting. The minutes of the previous Annual General Meeting, held on December 6, 1944, and published in the *Supplement* of December 23, were taken as read and confirmed.

Dr. DAIN reported that the Representative Body had elected as President of the Association, 1945–6, Mr. H. S. Souttar, C.B.E., D.M., M.Ch., F.R.C.S.

Mr. SOUTTAR took the chair amid applause, and proceeded to read his Presidential Address, which is published at page 163 of last week's *Journal*.

Dr. PETER MACDONALD, Chairman of the Representative Body, proposed a vote of thanks to Mr. Souttar for his address. He said that Mr. Souttar regretted as much as any of them the sad event which had opened the way for him to become President of the Association, but when Lord Dawson died the Council found to its great satisfaction that it had within its own ranks a person whom it could recommend with confidence to the Representative Body as President. To those of them who had been for long his colleagues in the work of the Association, and who had sat under his chairmanship in various capacities, Mr. Souttar's election was a source of great pleasure, and they felt that Lord Dawson would have an adequate successor. He added that Mr. Souttar might have to be President for a longer time than usual, until, in fact, the Association resumed its practice of visiting provincial cities and selecting its President from the locality in which its Annual Meeting was held. But the President would not misunderstand him when he said that he hoped his tenure of office would not be too long.

The vote of thanks was carried by acclamation.

On the motion of Dr. I. D. GRANT, seconded by Mr. A. STAVELEY GOUGH, Messrs. Price, Waterhouse and Co. were reappointed auditors of the Association at a remuneration of 300 guineas.

The Annual General Meeting then concluded.

GENERAL MEDICAL COUNCIL

DISCIPLINARY INQUIRIES

(Concluded from p. 17)

Reference of Patients to Abortionist

The Council on July 17 considered the case of James Alexander Henry Van Derwert, registered as of Regent's Square, London, who was summoned on the charge that in or about July, 1944, he had referred a woman, who was named in the charge, to one Pius Louis Beausoleil, who, to his knowledge, was an unqualified and unregistered person, in order that he might procure her abortion; an alternative charge was that he referred the woman to this unregistered person for attendance and/or treatment and/or the performance of an operation in a matter which to his knowledge required professional discretion or skill, and, further, that by his presence, countenance, advice, assistance, and co-operation he knowingly enabled the said Beausoleil to engage in professional practice as if he were duly qualified and registered.

Mr. Gerald Howard, counsel, in opening the complaint, said that the case arose out of the conviction on December 8 last of a man named Beausoleil, a herbalist, of using an instrument to procure abortion. According to a statement made to the police by Dr. Van Derwert, he had known of Beausoleil for a number of years and was aware that he was not a medical practitioner. The woman named in the charge went to Dr. Van Derwert and asked for assistance in terminating her pregnancy; as a result she was put in touch with Beausoleil, and an illegal operation was performed. The police entered the premises actually as the operation was being performed. According to Dr. Van Derwert's statement he had referred women to Beausoleil, but he had never kept a record of their names and addresses. He had received no payment from Beausoleil, and he had never learned what had happened. It was plain, said Mr. Howard, that Dr. Van Derwert was consulted by the woman and put her in touch with Beausoleil, knowing that he was not a registered practitioner and that he had dealt with women in that condition before.

Detective-Inspector Philip Burney, of Scotland Yard, testified that one of the cases to which Beausoleil pleaded guilty when charged was the case of this particular woman. In the course of inquiries into Beausoleil's activities he interviewed Dr. Van Derwert, whose statement was voluntarily made. It was made under caution because Dr. Van Derwert was suspected of connivance, but Beausoleil made no statement involving Dr. Van Derwert, and Dr. Van Derwert was never charged. Dr. Van Derwert became involved through a note, part of which was in his handwriting, that was found in Beausoleil's possession.

A woman who was described as C. D. said that she called on Dr. Van Derwert in June, 1944, with the woman on whom eventually the operation was performed. He was not in, and she left a note for him. Later she and the woman saw the doctor; he said he could not help the woman, but he would "contact" someone who could. Evidence was also given by the woman on whom the operation was performed. She described how she went with C. D. to "a doctor near King's Cross," who said that he knew of somebody who would help her, and he wrote down her address. Dr. Van Derwert did not examine her. No money was paid to him.

In his defence Dr. Van Derwert said that he was 70 years of age, was born in Ceylon, and qualified in 1898. He saw active service in the Boer War and in the first European War. When the two women called on him they were very distressed, and all he said to them was that he had done nothing like that in his practice, but that there were herbalists about and that they might consult one of them. When he saw Beausoleil, who was a patient of his, he told him about a woman who was worrying about her pregnancy, but he did not introduce any woman to Beausoleil for the purpose of an illegal operation. His object had been to get rid of these women. With regard to the note, it was left at his house by C. D., and he wrote the other woman's name and address at the bottom of it, but he did not know how it came into the possession of Beausoleil. It was pointed out to him that in his statement he said that he had referred women to Beausoleil; he now strongly denied that he had referred them for the purpose of an illegal operation.

Mr. G. F. Rutledge, on behalf of the doctor, said that this was a tragic case. The doctor was an old man, suffering from great physical infirmity. It was unfortunate that evidence in support of the complaint should have been given by accomplices who, under the rules of the Council, could not be sworn.

Mr. Gerald Howard said that this was not a case of asking the Council to act upon the uncorroborated evidence of accomplices, because there was the strongest corroboration of everything those witnesses had said in the statement of the doctor himself—that he had referred women to this herbalist.

The President announced that certain facts alleged in the charge—the facts stated above—had been proved to the satisfaction of the Council. "In respect of the facts so proved the Council have found you to have been guilty of infamous conduct in a professional respect. The Council, however, have not seen fit, in view of your age and physical condition, to direct the Registrar to erase your name from the *Register*."

Convictions

The Council considered the case of John Mackay Young, registered as care of New Zealand House, London, who, at Newcastle-upon-Tyne on Jan. 31, had been convicted of being drunk at South Gosforth railway station, and fined 10s. and 21s. costs. The Council's solicitor stated that Dr. Young had been before the Council on similar charges in 1938, when judgment was postponed. In 1941 he was struck off the *Register*, but restored in 1942. Mr. Oswald

Hempson, in Dr. Young's defence, said that during the severe weather Dr. Young went on a long railway journey and drank from a bottle of gin. On alighting he slipped on the frozen platform and injured his head.

The Council found the conviction proved, and ordered the erasure of Dr. Young's name.

Alleged Failure to Exercise Reasonable Skill and Care

On July 18 the Council considered the case of Richard Morven Shirlaw, registered as of Collier Row Lane, Romford, who appeared on a charge that he had failed to exercise reasonable skill and care in the treatment of Charles William Pearson, a person for whose treatment he was responsible under the National Health Insurance Acts. The charge stated that, to the doctor's knowledge, on the day before he visited him Pearson had drunk in error part of the contents of a bottle of liniment commonly known as lin. A.B.C., being a preparation containing substances included in the First Schedule of the Poisons Rules, 1935, as substances falling within the Poisons List to which special restrictions applied, which he had prescribed for him a few days previously. It was complained that he had failed to make an adequate examination of Pearson when he visited him, had failed to take steps to ensure that his stomach was completely emptied of its contents with the least possible delay, and had failed to inform the authorities of a hospital, to which he had arranged for him to be removed, with reasonable promptitude of the composition of the liniment he had drunk.

The complainant was the Minister of Health. Mr. Winterbotham, the Council's solicitor, read the report of the persons appointed to hear the appeal of Dr. Shirlaw from a decision of the Essex Insurance Committee concerning this matter. It was stated that Mr. Pearson, who had been suffering from an influenza chill and bronchitis, saw Dr. Shirlaw, who prescribed for him a medicine to be taken in doses of one tablespoon and "liniment A.B.C." compounded of equal parts of liniments of aconite, belladonna, and chloroform. Mr. Pearson by misadventure drank some of the liniment in mistake for the medicine. He was given an emetic and medicinal salts, and Dr. Shirlaw, who was summoned, prescribed repeated doses of sugar and water. Dr. Shirlaw had alleged that he took the patient's pulse and found it steady, the patient's skin was moist and of good colour, the pupils were not dilated, and there were no symptoms of toxicity; he saw about a cupful of brown vomit in a bowl beside the bed. Two other witnesses, relatives of the patient, were emphatic, however, that there was no such bowl in the room, and that Mr. Pearson had not vomited at this stage, and was in a semi-conscious condition. The following evening a nephew of the patient telephoned to Dr. Shirlaw and suggested that Mr. Pearson should be taken to hospital. Dr. Shirlaw agreed and made arrangements. He informed the hospital authorities that the patient had swallowed liniment in mistake for medicine, but did not specify of what the liniment was compounded, and the hospital authorities did not have this information until the surgeon on duty telephoned Dr. Shirlaw to ascertain it. Dr. Shirlaw did not visit the patient again, and the patient died on the following day. The persons appointed to hear the appeal stated:

> "We are more disposed to accept the version of the relatives as to what happened at Dr. Shirlaw's visit than that of the doctor, though even from his own version it is evident that his examination was cursory and inadequate. . . . We are of opinion that by his failure to make an adequate examination of Mr. Pearson and take steps to ensure that with the least possible delay his stomach was completely emptied of its contents, Dr. Shirlaw failed to exercise reasonable skill and care."

Mr. Oswald Hempson, solicitor, on behalf of the Medical Defence Union, who appeared for the defence, admitted that his client was under an obligation to exercise reasonable skill and care, but, he asked, "Where is this thing to stop?" "Any one of you," he added, "may make a mistake. We have cases of forceps being overlooked, and occasionally cases so grave as the removal of the wrong eye, the operation on the wrong side, and cases of mistaken diagnosis. Each one of us can be wise after the event." At a later stage Dr. Shirlaw appreciated the toxicity of this "A.B.C." liniment. There was a real danger that by the use of initials people would fail to appreciate the nature of the contents. Dr. Shirlaw had admittedly failed to exercise reasonable skill, but there was no question of his neglecting the interests of his patients for his own convenience. Could it be said that he was guilty of infamous conduct by reason of this one error?

I should like to emphasize [Mr. Hempson continued] that this is a complaint from the Ministry of Health. They can remove this man from the list of insurance practitioners if they desire to do so. Apparently the Minister has decided that he has not been so culpable in this case as to warrant that, yet they ask you to say that he has been guilty of infamous conduct in a professional respect and is no longer fit to remain on the *Register*. I feel that this is stretching the intention of the Act. Is everyone who makes a mistake in your profession to be liable to appear before you and have his name erased from the *Register*?

The Legal Assessor: Is not the issue that this tribunal has to consider whether the negligence was so gross as to amount to infamous conduct? It must be a question of degree, must it not?

Mr. Hempson agreed that it was a question of degree, but submitted that the present case was not one which would justify a finding of infamous conduct. The result was serious, but it was the mistake which mattered here, not the result, and if his client had taken every possible step, no one could say with certainty that the patient would have recovered.

The President, after the case had been considered *in camera*, said that the Council had found the facts proved, but in relation to the facts so proved had not found Dr. Shirlaw guilty of infamous conduct in a professional respect.

Conviction for Felony

The Council considered the case of James Samuel Ashe, registered as of Merrion Square, Dublin, who was summoned on a charge that on Nov. 24, 1944, he had been convicted at a circuit criminal court at Dublin of a felony—namely, that on a date unknown in or about September, 1941, in Dublin, with intent to procure the miscarriage of a woman, he unlawfully used an instrument or some other unknown means, and was sentenced to eighteen months' imprisonment in the second division. The case having already been before the Medical Registration Council of Eire, the President asked members of that body to withdraw. Mr. Winterbotham, in presenting the facts to the Council, pointed out that Dr. Ashe did not himself perform the operation, but was charged under the Accessories and Abettors Act, 1861, by which accessories before the fact to any felony could be indicted and convicted in all respects as if they were the principal felons. All that Dr. Ashe had done was to recommend the woman in question to go to someone else. Testimonials were read on behalf of Dr. Ashe, but the Council directed the erasure of his name from the *Register*.

Other Erasures

The Council also directed the erasure of the name of Harold Nairne Wright, registered as of Anstey, Leicester, who had been convicted in May last, after pleading guilty, to an offence against a youth, and on each of two counts had been sentenced to six months' imprisonment, the sentences to run consecutively; and of Gerald Green, registered as of Hough Hall, Moston, Manchester, who at Hampshire assizes in February last had been convicted on his own confession of bigamy, and ordered to be imprisoned for 22 months.

False Statement to a Registrar

The Council considered the case of Arthur James Daly, registered as of Rugby Road, Clifton-on-Dunsmore, who, at the Court of the Sheriffdom of Lanark at Glasgow in November last, was convicted of the following offence—namely, in oral answers, when registering the birth of an illegitimate child, knowingly and wilfully making a false statement to the Registrar in contravention of the False Oaths (Scotland) Act, 1933—and was sentenced to three months' imprisonment.

Dr. Daly was defended by Mr. Hempson. After a brief hearing the Council decided not to erase the name.

Five other practitioners appeared in answer to charges that they had been convicted at various courts of drunkenness and cognate offences. The Council placed certain of them on probation, but in no case other than the one already reported did it see fit to erase the name.

On July 5 the Medical Society of the Royal Air Force Hospital, Cosford, departed from its usual form of medical clinical meeting, and invited Dr. Charles Hill, Secretary of the British Medical Association, to address them. One hundred and seventy medical officers, including representatives from the Royal Navy and Royal Army Medical Corps, attended. Dr. Hill gave a detailed account of the present position regarding post-war medicine, commencing with an analysis of the White Paper and subsequent communications issued by the Association. He then dealt with the position of the general practitioner and the future of the specialist or consultant. Questions were invited afterwards, but the address had been so comprehensive that the majority of questions presented purely personal problems. The president of the society, Group Captain L. C. Palmer-Johes, thanked Dr. Hill for his brilliant address, and the audience, most of whom were temporary serving officers, acclaimed the speaker with prolonged applause.

IN NEW ZEALAND TO-DAY

Some harsh comments on the working of the health services in New Zealand are contained in an article by Dr. Douglas Robb, of Auckland, N.Z., in the *Canadian Medical Association Journal.* Readers of the *Supplement* are aware of the general structure of the health services in New Zealand from the account in these columns on Nov. 18 last (p. 115). According to Dr. Robb, most of the methods of paying G.P.s—salary, capitation fee, fee-for-service, and the refund system—are open to abuses by both doctor and patient. No one knows the cost to the Government, except that it is high, but the result, so far as doctors' incomes are concerned, is that mediocre practitioners are doing well and may make £3,000 to £4,000 a year each. Many young and inexperienced doctors already have become convinced that they are worth these sums, though a professor of medicine gets £2,000. It is said that the more business-like doctors through organization can earn £8,000 to £10,000. As in Great Britain, much of these earnings is returned to the Government in income tax; but, according to Dr. Robb, after a while doctors tend to ease up and to refuse night calls, earning 7s. 6d. (which is the fee-for-service payment) by completing certificates, repeat visits, etc., while passing on the more difficult cases to hospitals. The latter "are thus flooded with work the G.P. is paid to do but evades." Dr. Robb sums up his criticisms of the medical benefit section of the Social Security Act by saying that no new medical service has been provided; merely a new method of paying for the old article, which is now retailed under more difficult conditions.

Specialists, on the other hand, would appear to have been hard hit financially by the present scheme. A refund of 7s. 6d. per service rendered—whether that service is a consultation, an operation, or a post-operation visit—is available, whatever fee the specialist asks. Dr. Robb says this is thought by some to be a gesture to the people because no specialist service has been arranged, and by others to be a device to compel specialists to give receipts for money received and so be liable for income tax. At any rate specialists now have to keep records of all their daily visits to private patients in hospital, as each visit means another 7s. 6d. off the bill. It has been known for specialists to make assiduous visits to a patient on whom appendicectomy had been performed in a private hospital, "as a means of beating up a sizable fee for themselves in the case of a patient who would otherwise go to a public hospital."

The maternity, radiology, physiotherapy, and pharmacy services under the Act seem to be working well, and, what is more, appear to satisfy maternity hospitals, the radiologist, the medical physiotherapist, and the chemist. In assessing the value of the hospital benefits (a free-for-all system of hospital care has been in operation since 1939) Dr. Robb says it has to be remembered that, particularly in some of the big cities, the public hospitals have lagged far behind modern standards, and are feared by a proportion of the public. There is often no out-patient department, or if there is it is inadequately staffed, while pressure on hospital beds generally makes the service illusory. In some instances the best medical talent in the town is absent from the hospital staff, and the public knows this. Building programmes are years behind requirements and there are many instances of improvised accommodation. The article in the *Supplement* last November noted the fact that with the introduction of a free hospital service the honorary staffs of hospitals had disappeared. The part-time staff now receive varying sums—£500 for a senior and £250 for an assistant physician or surgeon—for their work. The New Zealand Government pays hospitals, private ones included, 9s. per patient per day, apart from extra sums for out-patient attendances, *x*-ray examinations, and physiotherapy.

In some final notes on the whole position in New Zealand Dr. Robb is not optimistic. He says that, while the principle of universal free service on the basis of a social security tax has been accepted, he doubts whether the finance of the scheme is sound. The present tax of a shilling in the £ is too small to do all that has been promised. That the Government's motive in introducing the present service was political is confirmed, in his opinion, by the fact that neither the men nor the material were available at the time and will not be for some time to come. The scope of the service falls very short of what is desirable. There has never been any suggestion that some of the money should be devoted to post-graduate teaching and research, to refresher courses for doctors, to the establishment of an institute for standardization of, and also perhaps preparation of, hormones, vitamins, and chemotherapeutic substances, or to clinical research departments in hospitals or to hospital reform generally. In all that has been done it has been assumed that past standards and methods left nothing to be desired. Dr. Robb hopes, however, that the planning for a National Health Service which is going on in Britain to-day will make all parties in New Zealand, including the doctors, realize that such a service is both desirable and inevitable in that country.

ATTENDANCE ON SOLDIERS, SAILORS, AND AIRMEN SICK ON LEAVE

Discussions have taken place recently between the B.M.A. and the three Service Departments concerning the scale of fees payable to civilian medical practitioners for attendance on Service personnel sick on leave. (Army Form O1667; R.A.F. Form 1667; Admiralty Form S.26.) The Admiralty, the War Office, and the Air Ministry announce that the following scale has been agreed:

Attendance and medicine	4s. 0d.
Day visit to patient (up to two miles)	6s. 0d.
Night visit to patient (up to two miles) (10 p.m. to 7 a.m.) ..	10s. 0d.
Distance fee "payable for day or night visit to patient for each additional mile or part of a mile over two miles" (payable in one direction only) ..	9d.
Fee for medical certificate ..	1s. 0d.

Army Form O1667 and R.A.F. Form 1667 have been simplified and revised, and the new rates take effect as from Aug. 1, 1945. As it may take some time to reprint and distribute the new forms, existing forms may still be supplied to doctors. In making claims, practitioners should enter the new rates, since instructions authorizing payment have been issued. In the case of military personnel all claims should be forwarded to the A.D.M.S. of the area in which the soldier is temporarily residing, and not to the commanding officer of the soldier's unit.

HEARD AT HEADQUARTERS

L.C.C. and Full-time Posts

The London County Council is proposing to appoint two full-time thoracic surgeons, one of them, a senior, to be known as chief thoracic surgeon. This position has arisen because the comparatively few surgeons available who are competent to undertake this branch of surgery look with disfavour on the sessional rates of remuneration offered by the council—namely, in hospitals within the London area three guineas a session, and in certain hospitals and sanatoria in outer London six guineas. The total expenditure on fees to the five part-time thoracic surgeons during a recent year was £2,180 for 532 sessions. It is considered that a salary scale substantially higher than that paid to full-time surgeon specialists—namely, £1,250 rising by increments of £50 to £1,500 a year—is necessary to attract a thoracic surgeon of adequate experience to the senior of the two positions. For the chief thoracic surgeon, therefore, a salary scale of £2,000, rising by annual increments of £100 to £2,500, is proposed. The scale for the other thoracic surgeon will be the same as for the surgeon specialists. The appointments to the full-time posts will render unnecessary the employment of the present part-time thoracic surgeons. The consent of the Ministry will be required for the creation of the new positions.

The council is also appointing a consultant in allergic diseases. For some time voluntary assistance has been afforded to the hospitals by a consultant specializing in allergic diseases, but the demand for his services is increasing, and it is felt that the time has arrived for the appointment of such a consultant at a sessional basis of remuneration.

Night Calls

After the resolution on night calls was carried at the recent Annual Representatime Meeting of the B.M.A.—the meeting decided that wherever practicable a night call should be deemed to be between 8 p.m. and 9 a.m.—it was stated by some representatives that an ordained time for night calls for doctors was set out in *Whitaker's Almanack.* A diligent search has failed to find in the current issue any reference to the subject. At the same time, the almanack contains so much compact information, including some most curious facts about chronology, that it is quite possible it is embedded somewhere in its pages, and it would be interesting to know on what authority it was laid down.

Doctors and the Press

A resolution of the A.R.M. which was withdrawn referred to the unsympathetic attitude of the Press, but the Chairman of Council would not agree to this diagnosis. With the exception of three or four prominent newspapers, he had found the Press helpful and sympathetic, and for this change he commended the Public Relations Department.

Correspondence

Release of Doctors from the Navy

SIR,—I and all my colleagues would like to know why the release of Naval medical officers is being so delayed over that of medical officers in the other Services. The obvious reply that the Navy has a large part to play in the Pacific war does not satisfy us.

When, three months ago, I inquired about my prospects for demobilization I was told that being Group 16 I would have to see the Japanese war through, as the Navy was very short of M.O.s. On my way out to my present appointment I met two disconsolate newly joined R.A.M.C. doctors who, applying to join the Navy at the same time as I made my inquiry, were told that the Navy had "no vacancies" for M.O.s.

Surely of all the branches in all the Services by far the most interchangeable of personnel must be the medical, owing, as we do, 95% of our value to our pre-Service training and experience—a situation which is reversed in nearly all other branches. The captain of my ship wants to know if I am a sound "doctor" and doesn't give a hair for my knowledge of "Service routine." I would like to know if any R.A.M.C. doctors are being transferred to the Navy, and if, as I suspect, none, why this should be at the same time as my release is being delayed. I can imagine our permanent Service administrators throwing up their hands in horror at the thought of having "damned Pongoes" in the Royal Navy, but should this antique attitude be allowed to create such an unfair situation?

As it is my hope that you will publish this letter I must, for fear of reprisals, remain anonymous.—I am, etc.,

"SURG. LIEUT.-CMDR., R.N.V.R."

Medical Demobilization

SIR,—Reading Squad. Ldr. Gill's letter (*Supplement*, July 21, p. 12) on the "peace and security" we elderly civilian practitioners had lived in, I, like "little Audrey," laughed and laughed and laughed. Perhaps Squad. Ldr. Gill *may* have heard of high explosives and "flying bombs," and perhaps have heard of Croydon and area having a few incidents. As regards "inflated incomes," a large percentage of our patients have been bombed out of their homes and many more have lost their source of income. We here have done our bit, and perhaps a little over.—I am, etc.,

Norbury, S.W.16 R. BERRY FORGAN.

SIR,—The footnote appended to the letter of "Life Sentence" (*Supplement*, July 14, p. 8) to the effect that the C.M.W.C. is doing everything possible to recruit specialists will amaze those specialists serving with the Forces. It takes anything from five to ten years to make a specialist, and, as for the past six years all newly qualified medical men, after six to twelve months as house-surgeons, have been drafted into the Forces, quite naturally there are no replacements available. In most civil hospitals the retiring age for specialists is 65, and there re many men now over 50 years of age who, having served for six years in the Army, have no desire to return to civil fe and start all over again. Many of ese would gladly remain on, given a eriod of seven or ten years' security. No ch offer has been made; they have the option of signing-on for one or two years or until general demobilization is ordered, which is useless, as they would be worse off in two years' time than they are at present.

The fact is that the R.A.M.C. has no particular wish to recruit specialists as such at all. In peacetime a regimental medical officer, after some years of form-filling, attends a "course" of three months, after which he becomes a full-blown specialist in his chosen subject. From this anyone can deduce how wonderful are the facilities and material existing in the Army for the production of specialists—or can't they?—I am, etc.,

"RELEASED SPECIALIST."

SIR,—It is comforting to read each week that the C.M.W.C. remains unshaken in its good intentions as regards our demobilization. But in spite of this our doubts return, and are increased by semi-official rumours of a shut down after Group 11. It is fair to assume that the authorities know the size of the discharge groups, their own requirements, and the size of the new intake. Why cannot we be told the result of this simple arithmetic?

There is increasing pressure for the release of doctors in Class B. Those of us who have been away nearly six years regard this with suspicion. If Class A releases are going to be delayed we should not feel quite so sore if we were given a definite date for each class, and if we knew how much "queue-jumping" was going on.—I am, etc.,

"CAPT., R.A.M.C."

Voting at Representative Meetings

SIR,—I agree with Lieut.-Col. Balck-Foote's view that the Chairman of Council exerted an undue influence at the last two Representative Meetings. It is true that the Representative Body is free to make its own decisions, but, in fact, it is at present mainly guided by the Chairman of Council. This is because it has been led into such utter confusion of thought that it will accept any clear line of action suggested by a recognized leader in that Body.

This confusion of thought is due to the present system where lengthy agenda with unimportant details have to be considered in too short a time; where decisions have to be reached without the meeting being given enough facts—e.g., having to decide on the 100% issue without knowing who would be in control of the medical service; where resolutions passed at previous meetings are ignored; and where recommendations have to be accepted not because they will lead to the best medical service possible, but because of the fear that negotiations with the Government will be broken off if they are not accepted.

The remedy would seem to be in an alteration of the Standing Orders so that the Agenda Committee could produce a sensible agenda.—I am, etc.,

London, W.8. H. STEPHEN PASMORE.

Regional Organization of the Association

SIR,—At the Council meeting on June 13 it was agreed that regional organization should be postponed. At a previous Council meeting it was agreed that a regional organization should be set up. The Representative Meetings have repeatedly sent recommendations to the Council to proceed with regional organization.

One of the main reasons for postponement appears to be the cost of £2,000 a year for each region. The Chairman pointed out to the Council that one of the results of appointing regional secretaries might be to increase membership, which would go some way to meet additional expenditure. In 1943 £15,000 was put aside for regional organization, and in 1944 £10,000 for this purpose; so the B.M.A. is not short of funds to carry out regional organization.

It seems to be a waste of time to have Representative Meetings if their recommendations are not carried out by the Council. Surely the duty of the Council is to carry out the policy and recommendations of the A.R.M. I take it that the Representative Meetings represent the whole of the B.M.A. members, and the Council a body elected by them to put their recommendations and wishes into operation. The members have the remedy in their own hands. How long is the profession going to allow "the tail to wag the dog"?—I am, etc.,

Dunscar, Bolton. HAROLD ROBINSON.

Professor R. M. F. Picken

SIR,—I trust that you will permit me to supplement what you have said (July 28, p. 15), about Professor or, as I presume we ought now to call him, Provost Picken. I wish to testify to the extreme value of the work he has done for the profession through his services on the Central Medical War Committee. In addition to the clearest of brains he has the power to give incisive expression to his thoughts; and great as is his loss to the Association generally, to me personally, who am chairman of the executive committee of the C.M.W.C., the loss of his counsel on the difficult problems which are confronting it and will confront it is the greatest.

I trust that ere long he may return to the Council, as well as to the counsels, of the Association.—I am, etc.,

York. PETER MACDONALD.

Financing Purchase of Practices

SIR,—The *Journal* has rendered the profession a useful service in presenting clear details of the proposed method of financing the purchase of practices If 5,000 doctors will require such loans, the scheme would demand a capital of at least £15,000,000, and it is therefore necessary to consider carefully what it offers to practitioners and hence its chance of success.

In one respect the description in the *Supplement* of June 9 (p. 103) is inadequate, and it should be noted that though net incomes of £633 or £731 are attained according to the length of the period of amortization, yet the income tax that must be paid will in each case be on an income of £1,050. In other words, with income tax at present rates, in the one case over £200 and in the other over £150 more tax would be payable than if the practitioner were in whole-time employment at the incomes quoted. Consequently, after deducting the tax the true net income would be approximately £300 to £400 if the ten-year repayment were adopted, and about £100 more if the doctor accepted the longer period of financial loading. If, however, further assistance is required for purchase of a house, car, and equipment, the attempt to amortize such loan in a 10- to 15-year period would be a considerable, if not an impossible, additional burden.

The ex-Service doctor will naturally consider carefully whether it is worth while accepting such a financial burden for such a reward, and whether he will obtain such a standard of living and freedom from anxiety as will enable him to put his best work into the practice of medicine.—I am, etc.,

London, E.7. ROBERT POOTS.

Doctors and the Election

SIR,—The medical profession will have received the Election results with more equanimity than most other members of the community who are not Socialists. It has always seemed strange to me that members of all the political parties regarded the socialization of the doctors as a progressive step. If the State can run the health services better than the doctors themselves it is surely right to suggest that the same applies to all trades and professions. I suppose it is only human nature to gain comfort from companions in distress.—I am, etc.,

Camberley. LESLIE HARTLEY.

SIR,—Under the heading of "Doctors' View of Election" the *Daily Telegraph* publishes an account of what is reputed to have transpired at the A.R.M. It is poor reading. The cheering which is said to have occurred when it was announced that Sir William Beveridge and Mr. Ernest Brown had been defeated at the poll was a schoolboy gesture, to say the least of it, and not likely to impress the public, who have given such a decided answer to the question as to whether they are in favour of a National Health Service—and a whole-time one at that. There can be no doubt that this is what the Election result means, for this was one of the main planks of the Labour manifesto.

Dr. Guy Dain, with his usual sagacity, urges a restrained and moderate attitude, but this is countered by the extravagant absurdities of Mr. Lawrence Abel. As a representative of the "Harley Street group" he has done them and all the rank and file of the profession a great disservice by this irresponsible nonsense. Unfortunately, his remarks will carry great weight, as the sayings of a consultant do with the layman.

No one can be in doubt that we are now, as a profession, faced with the very thing that we wanted most to avoid—a whole-time salaried State Medical Service. The Government will not help us, but the public might if we showed any inclination to co-operate in a scheme that would fill the bill of providing a good service to all under State supervision. Opposition can only worsen our case. We have got to mould the future service, not fashion it. It would be well if those whose meetings are reported by the Press were a little more conscious of their responsibilities than to give cause for the publication of articles such as that referred to above.—I am, etc.,

Cheshunt, Herts. CYRIL SHERRIS.

The Medical Women's Federation will be glad to hear from medical women who, on demobilization from the Services, are faced with any difficulty on re-entering civilian life on which they desire advice. The Federation can loan money on easy terms in sums up to, say, £100, to suitable applicants who contemplate doing postgraduate study, or who wish to undertake medical work which involves monetary outlay. All inquiries should be addressed to the Secretary, Medical Women's Federation, 73, Bourne Way, Hayes, Bromley, Kent.

H.M. Forces Appointments

ARMY

Col. J. W. C. Stubbs, D.S.O., M.C., late R.A.M.C., having completed four years in the rank, is retained on the Active List supernumerary.

ROYAL ARMY MEDICAL CORPS

Major J. E. Rea to be Lieut.-Col.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

War Subs. Major W. H. H. J. de Wytt, from Supplementary Reserve of Officers, to be War Subs. Major.

TERRITORIAL ARMY

Col. (Temp. Major-Gen.) P. H. Mitchiner, C.B., C.B.E., T.D., K.H.S., late R.A.M.C., having attained the age limit, has retired.

Col. Sir E. M. Cowell, K.B.E., C.B., D.S.O., T.D., K.H.S., late R.A.M.C., to be Major-Gen.

Col. G. J. Linklater, O.B.E., T.D., late R.A.M.C., having attained the age limit, has retired, retaining the rank of Col.

ROYAL ARMY MEDICAL CORPS

War Subs. Majors P. J. May, M.B.E., T. T. S. Hall, M.B.E., F. L. Ker, and G. W. Molyneux to be Majors.

Capt. W. A. Liston, from R.A., T.A., to be War Subs. Major. (Substituted for the notification in a *Supplement* to the *London Gazette* dated June 29.)

Senior Training Corps.—Lieut. W. H. Newton, supernumerary for service with Liverpool Univ. Senior Training Corps (Medical Unit), has resigned his commission.

2nd Lieut. D. W. L. Leslie, from R.A., T.A., to be Lieut.

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

War Subs. Capt. T. C. Masson has relinquished his commission on account of disability, and has been granted the honorary rank of Capt.

To be Lieuts.: D. H. Ropschitz and H. Parsons.

ROYAL AIR FORCE

RESERVE OF AIR FORCE OFFICERS

Squad. Ldrs. (Temp.) R. M. Hewat and E. H. E. Cross have been granted the rank of War Subs. Squad. Ldr.

ROYAL AIR FORCE VOLUNTEER RESERVE

Squad. Ldr. (Temp.) G. MacK. Gibson has been granted the rank of War Subs. Squad. Ldr.

Fl. Lieut. C. Hardwick has been granted the rank of War Subs. Squad. Ldr.

INDIAN MEDICAL SERVICE

Col. D. V. O'Malley, O.B.E., V.H.S., to be Major-Gen.

Lieut.-Col. B. Basu, C.B.E., has retired, and has been granted the honorary rank of Col.

Lieut.-Col. P. N. Lahiri has retired.

Major C. L. Pasricha to be Lieut.-Col.

Capts. G. R. C. Palmer, J. Revens, T. Sommerville, A. C. Taylor, and J. G. Thomson to be Majors.

ARMY IN BURMA RESERVE OF OFFICERS

EMERGENCY COMMISSIONS

To be Lieuts.: Maung U., V. S. Hariharan, J. V. Decruz, and Y. M. Khan.

BRITISH MEDICAL ASSOCIATION

Election of Member of Council by the Metropolitan Counties Branch

Notice is hereby given that, owing to the election of E. A. Gregg as Deputy Chairman of Representative Body, a vacancy exists on the Council for the Metropolitan Counties Branch (Group I). Nominations of candidates must be forwarded in writing so as to reach me by Sept. 1, 1945. Candidates must be nominated by either (*a*) a Division or (*b*) not fewer than three members of the Branch. A notice will be published by the Council in the *British Medical Journal Supplement* on Sept. 15, 1945, of the candidates nominated. If a contest occurs voting papers will be issued on Sept. 15, 1945, to each member of the Group. A notice will be published by the Council in the *Supplement* of Sept. 29, 1945, giving the result of the election.

CHARLES HILL,
Secretary.

Petition for the Formation of a Group of Dermatologists

The following petition for the formation of a Group of Dermatologists within the B.M.A. has been addressed to the Council:

We the undersigned members of the British Medical Association engaged in the practice of dermatology hereby make petition for the formation within the Association of a Group of Dermatologists.

We are engaged in a specialized branch of medical work of which the importance is becoming increasingly recognized, but the number of dermatologists in one Division is too small adequately to put forward the medico-political problems of our specialty. We are, therefore, of the opinion that the formation of a group of those whose work is exclusively confined to dermatology would be an advantage not only to the specialty but also to the Association.

We have the honour to be, Sir,
Your obedient Servants,

R. T. BRAIN, London.
W. H. BROWN, Glasgow.
A. BURROWS, Brentwood.
S. E. DORE, London.
G. DUCKWORTH, London.
D. ERSKINE, London.
DORIS FLETCHER, Sheffield.
L. FORMAN, London.
W. N. GOLDSMITH, London.
A. M. H. GRAY, London.
J. T. INGRAM, Leeds.
R. A. E. KLABER, London.
E. C. RITTER, Lincoln.
A. C. ROXBURGH, London.
J. F. SMITH, Glasgow.
R. STOPFORD-TAYLOR, Liverpool.
A. M. STUART, Southsea.
E W. PROSSER THOMAS, Richmond, Surrey.
M. S. THOMSON, London.
H. R. VICKERS, Sheffield.
H. J. WALLACE, Woking.
C. H. WHITTLE, Cambridge.
J. E. M. WIGLEY, London.
L. K. WILLS, Harrow.

Branch and Division Meetings to be Held

WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—At Clayton Hospital, Postgraduate Lectures by Dr. Leslie Watson: Sun., Aug. 12, 11 a.m., Rheumatoid Arthritis: Sun., Aug. 19, 11 a.m., Glycosuria and Diabetes.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded, with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

DEATH

ALDREN TURNER.—In Edinburgh, on Sunday, July 29, 1945, William Aldren Turner, C.B., M.D., F.R.C.P., eldest son of the late Sir William Turner, K.C.B., F.R.S., Principal of the University of Edinburgh, husband of Helen M. Turner, of 27, Evelyn Gardens, London, S.W.7, and father of John, Patrick, and Anthony.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have re sumed civilian practice: Dr. J. R. Rees F.R.C.P., 116, Bickenhall Mansion London, W.1; Dr. C. P. Symond F.R.C.P., 87, Harley Street, Londo W.1; Dr. W. D. Jeans, at 17, Ur versity Road, Leicester; Dr. G. de I Rudolf, at Sea Walls, Clevedon, Som set; Mr. R. Scott Stevenson, at Harley Street, London, W.1; Mr. F. R. Stammers, F.R.C.S., at 89, Harbo Road, Edgbaston, Birmingham, 15.

CITY OF STOKE-ON-TRENT. CITY GENERAL HOSPITAL. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners (single, male or female), including R and W practitioners who now hold A posts, for the appointment of Assistant Resident Medical Officer (B2), at the City General Hospital, Stoke-on-Trent. If offered to an R or W practitioner the appointment will be limited to a period of six months, otherwise will be for a period of one year. The salary is at the rate of £250 per annum, plus bonus, with full residential emoluments. The Hospital, which is an Emergency Hospital, has approximately 1,200 beds, and there is excellent scope for medical, surgical, and obstetrical work.—Applications endorsed "Medical Officer, City General Hospital," to be sent to the undersigned immediately.—Harry Taylor, Town Clerk.

COUNTY COUNCIL OF THE STEWARTRY OF KIRKCUDBRIGHT.—Applications are invited for the temporary post of ASSISTANT MEDICAL OFFICER OF HEALTH, male or female, in the Public Health Department of the County Council of the Stewartry of Kirkcudbright. Applicants should be registered medical practitioners, and preference will be given to applicants holding the Diploma in Public Health. Salary £600 per annum, with, in addition cost-of-living bonus, at present £60 per annum (male) or £48 per annum (female). The person appointed will require to provide and maintain a motor car, in respect of which a travelling allowance will be paid. Applications should be lodged with the County Clerk, Kirkcudbright, not later than August 31, 1945.

CAMBRIDGE COUNTY COUNCIL. County Hospital.—Applications are invited for the post of RESIDENT OBSTETRIC OFFICER (B2) at the above hospital. The appointment is limited to six months. Salary is at the rate of £250 a year, with full residential emoluments. R and W practitioners holding A posts may apply.

Applications are also invited from registered medical practitioners, male and female, for the post of HOUSE PHYSICIAN (A). Salary £150 a year, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months, otherwise not exceeding one year. Applications should be sent at once to the Clerk of the Cambridgeshire County Council, Shire Hall, Castle Hill, Cambridge.

CORNWALL COUNTY COUNCIL.—Applications are invited from registered medical practitioners for the whole-time appointment of a TEMPORARY ASSISTANT COUNTY MEDICAL OFFICER to reside in or near the City of Truro. The person appointed will be required to work under the direction of the County Medical Officer, and must be qualified to treat patients suffering from venereal disease. The duties will include the taking of such venereal disease clinics as the County Medical Officer may direct, the supervision of the Rural Practitioners' Scheme for the treatment of venereal disease, and any other work not necessarily connected with venereal disease treatment as may be required from time to time by the County Medical Officer. The commencing salary will be £750 per annum, rising by three biennial increments of £50 and one of £37 10s. to £937 10s. per annum, together with a travelling allowance in accordance with the County scale. The duties of the person appointed will be reviewed within two years of the appointment. Persons already in whole-time Public Health employment by local authorities are not eligible to apply. Applications should reach the County Medical Officer, County Hall, Truro, not later than September 1, 1945. The appointment is approved by the Ministry of Health.—L. P. New, Clerk of the County Council, County Hall, Truro.

EAST RIDING COUNTY COUNCIL. Driffield Emergency Hospital (324 beds).—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1), vacant immediately. The hospital provides experience in general surgery. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary from £350 to £550 per annum according to qualifications and experience, together with full residential emoluments. Applications should be forwarded so as to reach the undersigned as soon as possible.—T. Stephenson, Clerk of the Council, County Hall, Beverley.

KENT EDUCATION COMMITTEE.—Applications are invited for the engagement, on a sessional basis, of TEMPORARY PART-TIME OPHTHALMOLOGISTS for school medical work. The majority of clinics to be held are in North-West Kent, within 25 miles of London. Applicants should possess a specialist qualification in ophthalmology and indicate the number of sessions they are prepared to undertake. The fee for each session, which is usually of two hours, is 2½ guineas, and third-class travelling expenses will be paid to and from the usual place of residence. Applications are to be submitted to the undersigned not later than August 21, 1945.—Constant Ponder, School Medical Officer, County Hall, Maidstone.

LONDON COUNTY COUNCIL invites applications from registered medical practitioners for appointment as a TEMPORARY WHOLE-TIME ASSISTANT MEDICAL OFFICER in the Public Health Department. The duties will be primarily those in connexion with the school medical service. Salary £600 by £25 to £750, together with a cost-of-living addition, amounting at the present time to £60 a year for men and £48 a year for women. There are no emoluments. Medical practitioners in whole-time employment as public health medical officers who require the permission of the Ministry of Health before applying are ineligible. All appointments during the war are on a temporary basis and subject to review. It will be an advantage if the candidate is recognized by the Board of Education as a certifying officer for physically defective and mentally defective children, or has has special experience, particularly in mental deficiency. Candidates should submit with their application full information as to their liability for military service, medical fitness and position as regards deferment. Forms of application (stamped addressed envelope necessary) obtainable from the Medical Officer of Health (S.D.5), The County Hall, Westminster Bridge, S.E.1., and should be returned not later than August 18, 1945. Canvassing disqualifies.

LANCASHIRE COUNTY COUNCIL. Biddulph Grange Orthopaedic Hospital.—Applications are invited from registered medical practitioners, male or female, for the appointment of RESIDENT JUNIOR HOUSE SURGEON (B2), now vacant, including R and W practitioners who now hold A posts. If held by an R practitioner who is liable under the National Service Acts, the appointment will be limited to six months, otherwise it will be for a period of twelve months. The salary is at the rate of £250 per annum, with full residential emoluments. Applications, stating age, should be sent to Dr. F. Hall, School Medical and Child Welfare Department, County Offices, Preston, not later than August 18, 1945.—R. H. Adcock, Clerk of the County Council, County Offices, Preston.

LANCASHIRE COUNTY COUNCIL. Wrightington Hospital, near Wigan.—Applications are invited for JUNIOR MEDICAL OFFICER (B2) at the Wrightington Hospital, containing 370 beds (260 beds for non-pulmonary tuberculosis (adults and children), 20 beds for "combined" pulmonary and non-pulmonary cases, and 70 beds for pulmonary cases). The medical staff consists of medical superintendent, three assistants, two consultant orthopaedic surgeons, other visiting surgeons and visiting physician. Excellent facilities for reading for M.D. Salary £300 per annum, plus bonus, together with board, single quarters, and laundry valued at £146. R and W practitioners who now hold A posts may apply, when appointments will be limited to six months, otherwise one year. Forms of application and conditions of appointment from Central Tuberculosis Officer, County Offices, Preston. Mark letters "Wrightington M.O."

MIDDLESEX COUNTY COUNCIL. TEMPORARY DISTRICT MEDICAL OFFICER and PUBLIC VACCINATOR, Yiewsley and West Drayton Medical Relief district.—The County Council invites applications from registered medical practitioners for the above appointment. District Medical Officer (average number of cases 6 per annum). Salary at least £50 per annum, and as a wartime measure only, a payment equivalent to 20% of salary in respect of additional practice expenses, plus cost of expensive drugs, confinement fees and for services of another medical practitioner to administer short anaesthetics for minor operations. Duties in accordance with the Public Assistance Order, 1930, of the Minister of Health, reside in the district unless the Council otherwise determines, and nominate a deputy to act in his unavoidable absence. Public Vaccinator. Must produce to the Council a certificate of proficiency in vaccination, except in a case in which such certificate was required as a condition of obtaining any diploma, licence, or degree which he possesses; will be required to enter into a contract with the Council in accordance with the Vaccination Order, 1930, of Minister of Health. Contract will provide for the payment of the scale of fees laid down by the County Council. Applications must reach the undersigned by September 1, 1945.—C. W. Radcliffe, "Z," Clerk of the County Council, Middlesex Guildhall, Westminister, S.W.1.

MIDDLESEX COUNTY COUNCIL.—SURGEON REQUIRED at ASHFORD COUNTY HOSPITAL, Middx. (late Staines County Hospital). Applicants must be registered medical practitioners with higher degree or diploma in surgery, who have devoted their time wholly or chiefly to practice of surgery. Commencing salary between £650 and £950 p.a. according to experience, plus war bonus (now £60 p.a.). Non-resident, but surgeon appointed must live near hospital. Whole-time unestablished appointment, subject to medical examination and three months' notice. Salary is inclusive; any fees received must be paid to County Council. Surgeon appointed will take share in general surgery of hospital, his duties, such as Council may require, will be under general supervision of Medical Director, and may include teaching. Post vacant early September. Application to the undersigned. Application forms not provided. Closing date August 25, 1945.—C. W. Radcliffe, "Z," Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

NORTHUMBERLAND COUNTY COUNCIL. Hexham Emergency Hospital (Regional Orthopaedic Centre) (640 beds). APPOINTMENTS—Hospitals and Public Health, commence at page 10

NOTICES

ASTLEY COOPER STUDENTSHIP, Guy's Hospital.—This STUDENTSHIP, tenable at Guy's Hospital Medical School, will become vacant on October 1, 1945. The student, who is called the "Astley Cooper Assistant to the Curator of the Gordon Museum," will be elected for a period of three years. Particulars regarding the Studentship can be obtained from the Secretary to the Astley Cooper Trustees, Medical School Office, Guy's Hospital, S.E.1., to whom applications for the post should be addressed on or before September, 15, 1945.

APPLICANTS ARE ADVISED not to send original testimonials when replying to advertisements. Copies will answer the purpose quite as well, and in the event of their being lost or mislaid no inconvenience will ensue.

THE FACT THAT GOODS made of raw materials in short supply owing to war conditions are advertised in this Journal should not be taken as an indication that they are necessarily available for export.

LONDON SCHOOL OF HYGIENE AND TROPICAL MEDICINE. ROCKEFELLER FELLOWSHIPS IN PREVENTIVE MEDICINE.—(1) The Rockefeller Foundation is prepared to award a small number of Fellowships to enable medically qualified men and women who wish to take up public health as a career to engage in special studies for this purpose. These Fellowships will be open to those who hold a University degree in Medicine registrable in the United Kingdom and are British subjects by birth. (2) The Fellowships will be awarded for one or more years according to the needs of the candidate, but the normal period will be two years. The annual value will be between £450 and £800, and travelling expenses will be paid during residence abroad. (3) The committee of award is prepared to receive applications at any time, and medical officers serving with the Forces of the Crown may apply *now* for Fellowships, tenable on demobilization. No forms of application will be issued. Prospective candidates should write informally to the Dean, London School of Hygiene and Tropical Medicine, Keppel Street, Gower Street, London, W.C.1.

UNIVERSITY AND INDUSTRIAL APPOINTMENTS

DEMOBILIZED MEDICAL OFFICER, experienced with labour, is now free to accept any suitable APPOINTMENT.—Box 952, B.M.J.

THE WELSH NATIONAL SCHOOL OF MEDICINE (University of Wales).—Applications are invited for the full-time posts of (I) LECTURER IN BACTERIOLOGY; (II) LECTURER IN CLINICAL PATHOLOGY. The salary of each appointment will be at the rate of £875 per annum. The persons appointed will be required to commence duty as soon as possible. Further particulars of the appointments may be obtained from the undersigned.—S. C. Edwards, Secretary, The Welsh National School of Medicine, 10, The Parade, Cardiff.

THE UNIVERSITY OF LIVERPOOL.—The Council invites applications for the post of LECTURER IN DENTAL PATHOLOGY AND BACTERIOLOGY. The appointment will be a whole-time one, at a salary not exceeding £800 per annum, and to be fixed according to qualifications and experience. The University will consider applications from candidates in the Forces, or engaged upon other national service, even though they may have no immediate prospect of release. Applicants must have had training and experience in research methods in a department of a Medical School or similar institution, and should preferably hold a medical qualification. A dental qualification is desirable but not essential. Applications should be received not later than September 30, 1945, by the undersigned, from whom further particulars may be obtained.—Stanley Dumbell, Registrar.

UNIVERSITY OF BIRMINGHAM. Department of Anatomy.—Two whole-time TEMPORARY ASSISTANT LECTURERS are required for Session 1945-46. Salary £350 per annum. Duties to commence October 1. Applications should be sent to the undersigned immediately.—C. G. Burton, Secretary, The University, Edmund Street, Birmingham, 3.

UNIVERSITY OF ABERDEEN.—Applications are invited, before September 30, for the post of ASSISTANT in the Department of Medicine at a salary of £350 per annum. Applications (with references) and inquiries should be addressed to the undersigned.—H. J. Butchart, Secretary, The University, Aberdeen.

EDUCATIONAL

DIPLOMA IN PUBLIC HEALTH. THE ROYAL INSTITUTE of PUBLIC HEALTH AND HYGIENE.—The Course of Instruction may be commenced at any time. A prospectus and full particulars can be obtained from the Secretary, 28, Portland Place, London, W.1. Telephone: LANgham 2731-2.

BIRMINGHAM ACCIDENT HOSPITAL AND REHABILITATION CENTRE.
COURSE IN INDUSTRIAL HEALTH.

The Birmingham Accident Hospital, which acts largely as a service department to Industry's Workpeople, proposes to run a fortnight's intensive course in industrial health from Monday, August 27, to Saturday, September 8, 1945. This course is primarily intended for doctors in the Services who can obtain leave, for recently demobilized doctors, and for others who wish to take up this branch of medicine. The course will be in the charge of Dr. Donald Stewart, and will be for the most part practical in nature. The following have agreed to act as visiting lecturers: Dr. A. J. Amor, Chief Medical Officer, Ministry of Supply, London; Dr. Donald Hunter, London Hospital; and Prof. R. E. Lane, Manchester. In addition, Mr. Wm Gissane, Clinical Director of the Hospital, will take part in the training, together with Prof. W. H. Wynn and other members of the Birmingham University teaching staff. The fee for the course will be £10 10s., and numbers will be limited. Applications to join the course should be sent to the Hospital Secretary, from whom full particulars can be obtained.—A. A. MacIver, Secretary, Bath Row, Birmingham, 15.

APPOINTMENTS

(Continued from page 13)

NUNEATON GENERAL HOSPITAL (Voluntary Hospital) (104 beds). HOUSE SURGEON (CASUALTY) (A).—Applications are invited from registered medical practitioners, male and female, for the appointment of House Surgeon (A), which is now vacant, including practitioners within three months of qualification who are liable to service under the National Service Acts. The appointment will be for a period of six months. Salary is at the rate of £200 per annum, with full residential emoluments. Applications should be addressed to Douglas S. Pracy, Honorary Secretary, Medical Board.

NORTH STAFFORDSHIRE ROYAL INFIRMARY, Stoke-on-Trent.—Applications are invited from registered medical practitioners, male and female, for the following posts: GENERAL HOUSE SURGEON (A), ORTHOPAEDIC HOUSE SURGEON (A). Practitioners within three months of qualification who are liable to service under the National Service Acts may apply, when appointment will be for a period of six months. Salary will be at the rate of £185 per annum, with full residential emoluments. Applications to be forwarded as soon as possible to the House Governor.

NORTH CAMBRIDGESHIRE HOSPITAL, Wisbech.—Applications are invited from registered medical practitioners, including practitioners within three months of qualification who are liable to service under the National Service Acts, for appointment of HOUSE SURGEON (A), vacant immediately. Appointment will be for a period of six months. Salary £200-£250, with full residential emoluments. Applications should be sent to the Secretary.

NOTTINGHAM GENERAL HOSPITAL (712 beds, including E.M.S. beds).—Applications are invited from registered medical practitioners, male and female, including practitioners within three months of qualification who are liable to service under the National Service Acts, for the appointment of a RESIDENT CASUALTY OFFICER (A) for the above hospital. Duties to commence about August 10. If held by a practitioner who is liable under these Acts appointment will be for a period of six months. Salary at the rate of £200 per annum, with full residential emoluments. Applications to be sent to the undersigned.—Henry M. Stanley, House Governor and Secretary.

PRESTON ROYAL INFIRMARY. CASUALTY OFFICER (B2). Vacant August 20.—Applications are invited for the post of Casualty Officer (B2) in busy department from registered medical practitioners, including R and W practitioners now holding A posts. If held by R practitioner, the appointment will be for six months. Salary £200 per annum, with full residential emoluments. Applications to be sent to the Superintendent.

OSTER HOUSE E.M.S. HOSPITAL, St. Albans. HOUSE SURGEON (A).—Applications are invited from registered medical practitioners, female, for the post of House Surgeon (A), to become vacant on September 1, 1945, including practitioners within three months of qualification who are liable to serve under the National Service Acts. Appointment will be for a period of six months. Salary at the rate of £115 per annum, with full residential emoluments. Applications should be sent to the Medical Officer in Charge, Oster House, E.M.S. Hospital, St Albans, Herts, not later than August 17, 1945.

PONTYPOOL AND DISTRICT HOSPITAL, Pontypool, Mon.—Applications are invited from registered medical practitioners, male and female, for the appointment of RESIDENT MEDICAL OFFICER (B2), medical and surgical beds, vacant now, including R and W practitioners who now hold A posts. If held by an R or W practitioner, the appointment will be limited to six months, otherwise it may be extended for a further period. The salary is at the rate of £250 per annum, with full residential emoluments. Applications should be sent to N. A. Ball, Secretary.

ROYAL LONDON OPHTHALMIC HOSPITAL (MOORFIELDS EYE HOSPITAL), City Road, E.C.1.—Applications are invited for the post of THIRD HOUSE SURGEON (B1). Suitably qualified R practitioners holding B2 appointments are invited to apply. R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary at the rate of £100 per annum, with board and residence in the hospital. The appointment is for the period of six months as from November 1, 1945, and the candidate at the completion of that time will be eligible for appointment as Second House Surgeon, First House Surgeon, and subsequently as Senior Resident Officer for similar periods, subject to the approval of the Central Medical War Committee. The applicant must be prepared to begin his duties with the present officer on October 15, and will be non-resident until November 1. Applications must be received not later than August 27, 1945.—A. J. M. Tarrant, Secretary

Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months otherwise not exceeding one year. Applications to the Medical Superintendent as soon as possible.

ROYAL HALIFAX INFIRMARY (Class 1A, E.M.S.) (250 beds).—Applications are invited for the post of RESIDENT SURGICAL OFFICER (B1), male. Salary £250 per annum, with residence, board and laundry. Preference given to one holding the F.R.C.S. R practitioners who now hold B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Applications should be sent to the undersigned immediately.— A. Midgley, Secretary.

SALFORD ROYAL HOSPITAL.—Applications are invited for the post of HOUSE PHYSICIAN (B1), vacant September 15. Salary £175 per annum, plus the usual residential emoluments. Appointment is for six months. R practitioners holding B2 posts, also those holding B1 and rejected by the R.A.M.C. may apply. Applications to be made on the prescribed form, obtainable from the General Superintendent at the hospital.

SWANSEA GENERAL AND EYE HOSPITAL.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON to the Opthalmic and Aural Departments (B2), now vacant, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months. Salary is at the rate of £220 per annum, with full residential emoluments.

Applications are also invited from registered medical practitioners, male and female, for the appointment of two HOUSE SURGEONS (A), now vacant, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by practitioners who are liable under these Acts, appointments will be for a period of six months. Salary is at the rate of £165 per annum, with full residential emoluments.

Applications are also invited from registered medical practitioners, male and female, for the appointment of CASUALTY OFFICER (B2), now vacant, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months. The salary is at the rate of £192 10s. per annum, with full residential emoluments.—O. C. Howells, Secretary-Superintendent.

SAMARITAN FREE HOSPITAL FOR WOMEN, Marylebone Road, London, N.W.1.—Applications are invited from registered medical practitioners (male and female) for the appointment of RESIDENT GYNAECOLOGICAL REGISTRAR (B1) for a period of six months, commencing October 1, 1945. Applications from R practitioners who now hold B1 posts cannot be considered unless they have been rejected by the R.A.M.C. R and W practitioners now holding B2 posts may apply. Salary at the rate of £300 per annum, with board, lodging, and laundry. Applications should be sent to the Secretary at the Hospital on or before September 7, 1945.—G. H. Hawkins, Secretary.

ST. ALBANS AND MID HERTS HOSPITAL, St. Albans, Herts. (75 beds).—Applications are invited from registered medical practitioners, male or female, for the appointment of ASSISTANT RESIDENT MEDICAL OFFICER (A). Salary at the rate of £150 p.a., with full residential emoluments. Practitioners within 3 months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of 6 months. Applications should be sent to P. R. Battison, Secretary.

STIRLING DISTRICT MENTAL HOSPITAL, Larbert.—ASSISTANT MEDICAL OFFICER (temporary) (B1) required. Applications from R practitioners who now hold B2 or B1 posts cannot be considered unless they have obtained the sanction of the Scottish Central War Committee to their application. Previous mental hospital experience essential. Salary £500 per annum, plus war bonus, with additional £50 if holder of D.P.M., and with the usual residential emoluments. Applications to the Medical Superintendent.

SEAMEN'S HOSPITAL SOCIETY.—The Committee of Management invite applications for the appointment of whole-time male CLINICAL PATHOLOGIST at the Devonport Pathological Laboratories of the Dreadnought Seamen's Hospital, Greenwich, falling vacant at an early date, at the salary of £1,000 p.a. Applications will be welcome from officers anticipating release from the Armed Forces. Applications to be forwarded as soon as possible to the undersigned, from whom further particulars may be obtained.—F. A. Lyon, Administrator and Secretary, Seamen's Hospital Society, Greenwich, S.E.10.

SALISBURY GENERAL INFIRMARY. (Voluntary Hospital, 225 beds).—Applications are invited from registered medical practitioners for the appointment of a HOUSE SURGEON (A). Salary at the rate of £150 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may also apply, when appointment will be for a period of six months. Applications should be sent to John Williams, Superintendent and Secretary.

TAUNTON AND SOMERSET HOSPITAL (136 beds, plus 30 E.M.S., 3 residents).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. Salary £175 p.a. with full residential emoluments. If held by a practitioner liable under these Acts, appointment will be for six months. Applications to the Secretary-Superintendent, Taunton and Somerset Hospital, Taunton.

VICTORIA HOSPITAL, Blackpool (normal complement 200 beds, war-time complement 500 beds). —Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (B2) to the Orthopaedic Department and S.U.1, now vacant, including R practitioners who now hold A posts. The appointment is for a period of six months and the salary is at the rate of £200 per annum, with full residential emoluments.

Applications are also invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (B2) to the Eye, Ear, Nose, and Throat Departments, and ASSISTANT ANAESTHETIST, now vacant, including R practitioners who now hold A posts. The appointment is for a period of six months and the salary is at the rate of £200 per annum, with full residential emoluments.

Applications for each post should be sent to the undersigned immediately.—Walter R. Smith, General Superintendent.

WALSALL GENERAL HOSPITAL (181 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of CASUALTY OFFICER AND ORTHOPAEDIC HOUSE SURGEON (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months. Salary is at rate of £200 a year, with full residential emoluments. Applications should be forwarded immediately to the undersigned.—W. H. Harper, Honorary House Governor.

WARNEFORD GENERAL HOSPITAL, Leamington Spa.—Applications are invited from registered medical practitioners, male and female, for the post of CASUALTY OFFICER AND HOUSE SURGEON (B2) to one of the surgeons and V.D. officer. Salary is at the rate of £180 per annum, with full residential emoluments. R and W practitioners now holding A posts may apply. If held by an R practitioner the appointment will limited to six months. Applications should be sent to the undersigned as soon as possible.—J. R. Long, House Governor and Secretary.

WATFORD AND DISTRICT PEACE MEMORIAL HOSPITAL (256 beds).—Applications are invited from registered medical practitioners for the post of RESIDENT SURGICAL OFFICER (B2), vacant in the middle of September. R and W practitioners who hold A posts may also apply, when appointment will be limited to six months. Salary will be at the rate of £200 per annum, with full residential emoluments. Applications should be sent to the undersigned immediately.—H. M. Maskell, Administrator.

WINWICK HOSPITAL, Warrington.—Applications are invited from registered medical practitioners, male and female, for the appointments of JUNIOR HOUSEMEN (A), including practitioners within three months of qualification who are liable to service under the National Service Acts.. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary is at the rate of £120 per annum, with full residential emoluments.

WEYMOUTH AND DISTRICT HOSPITAL, Weymouth, Dorset.—The appointment of HONORARY PHYSICIAN will become vacant at the end of August. Applications are invited for the appointment, which will be a temporary one for an unspecified period and subject to review at intervals of six months. Applications, giving full details, should be received not later than August 16 by the Secretary and Superintendent.

WOKING VICTORIA HOSPITAL (64 beds).—Applications are invited from registered medical practitioners, male and female (British or alien), for the appointment of a HOUSE SURGEON (B2), vacant August 30. Salary £250, with full residential emoluments. R and W practitioners holding A posts may apply, when appointment will be limited to six months. Applications to be made to the Honorary Secretary.

INDIAN MEDICAL SERVICE. Recruitment c WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with th Indian Medical Service for the duration of the wa Applicants must be British subjects, of not mor than 45 years of age, and those selected will b appointed in the rank of Lieutenants. Antedate o seniority may be granted up to a minimum perio of 6½ years in respect of resident hospital appoin ments, higher qualifications, and/or profession experience. The antedate will count for pay an promotion, but, in the case of candidates recruite in this country, higher rank will not be assume until the date of disembarkation in India. O termination of service, a minimum gratuity is guar anteed to those officers who complete one year o service, viz., Rs. 2,000 to officers whose registrabl medical qualification is dated before January 1940, and Rs. 1,000 to those who qualified afte that date, plus one month's pay for each furthe completed year of Army Service. Further particula regarding rates of pay etc., may be obtained fror the Medical Adviser, India Office, London, S.W. or from the Secretary, Military Department, Indi Office, to whom all inquiries should be addressed.

LORD MAYOR TRELOAR CRIPPLES' HOSP TAL, Alton, Hants (330 beds).—Applications ar invited from medical practitioners of either sex fo the post of RESIDENT MEDICAL OFFICER (B1, now vacant R and W practitioners now holdin B2 posts may apply. Applications from R pract tioners now holding B1 posts cannot be considere unless they have been rejected by the R.A.M.C Post provides useful experience in orthopaedic an plastic surgery and surgical tuberculosis The pos is tenable for a year. Salary at the rate of £350 £550 per annum (according to experience) with fu board residence. Applications should be sent t the Secretary.

WILLESDEN GENERAL HOSPITAL, Harlesde Road, N.W.10.—Applications are invited for th following posts: (1) TEMPORARY HONORAR PHYSICIAN. Wartime appointment only. Can didates must be M.D. and F.R.C.P. or M.R.C.P Lond. and not engaged in general practice. (2 MEDICAL REGISTRAR. Part-time for six ses sions per week. Candidates must be M.D. c M.R.C.P.Lond. or preparing for such highe qualification, and not engaged in general prac tice. Salary £350 per annum, non-resident. Appli cations stating full particulars and giving names o three referees to be forwarded to the undersigned from whom copies of the regulations can b obtained. To provide opportunity for those servin in H.M. FORCES to apply, applications will b received up to November 30, 1945.—J. N. Drake Secretary.

WORTHING HOSPITAL (Voluntary Hospita (217 beds).—Applications are invited from registere medical practitioners for the appointment c HOUSE PHYSICIAN (A), vacant September The post also provides for experience in minor sur gery. Salary at the rate of £175 p.a. Practitione within three months of qualification and liab under the National Service Acts may also apply Residential emoluments are payable. To R pract tioners the appointment is limited to six months Applications should be addressed to A. V. Oakton House Governor.

YORK COUNTY HOSPITAL (222 beds).—Appl cations are invited from registered medical pract tioners, male and female, for the appointment c a HOUSE PHYSICIAN (B2), vacant September 23 1945, including R and W practitioners who no hold A posts. If held by an R practitioner, th appointment will be limited to six months. Th salary is at the rate of £175 per annum, with fu residential emoluments.

Applications are also invited from registere medical practitioners, male and female, for th appointment of an ORTHOPAEDIC HOUSE SUR GEON AND CASUALTY OFFICER (B2), vaca on September 27, 1945, including R and V practitioners who now hold A posts. If held b an R practitioner, the appointment will be limite to six months. The salary is at the rate of £175 pe annum, with full residential emoluments.

Applications for each post to be sent to th undersigned by August 20, 1945.—J. R. Mackril Secretary.

YORK COUNTY HOSPITAL (222 beds).—Appl cations are invited from registered medical pract tioners, male or female, for the appointment o HOUSE SURGEON (A), vacant September 22 1945, whose main duties are in the Eye, Ear, Nos and Throat Department (37 beds with busy Ou patient Clinics), but who will share in the genera work of the hospital, also Casualty Duty, includin practitioners within three months of qualificatio who are liable to service under the National Servic Acts. If held by a practitioner who is liabl under these Acts, appointment will be for a perio of six months. Salary is at the rate of £175 pe annum, with full residential emoluments. This pos is recognized for D.O.M.S. and D.L.O. examina tions. Applications to be sent to the undersigne by August 20, 1945.—J. R. Mackrill, Secretary.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL

LONDON SATURDAY AUGUST 18 1945

THE CONSTITUTION OF THE B.M.A.

Before the war the B.M.A. used to publish every autumn an *Annual Handbook*, mainly for the use of Division secretaries. It included lists of officers, an account of the machinery of the Association, and a summary of the policy of the Association on matters that often arose in the course of a Division secretary's work. Owing to shortage of paper and lack of staff publication has had to be suspended during the war, but it is hoped to issue as soon as possible an up-to-date "directory" section. It is also thought that the following summary of the Association's constitution and machinery in the British Isles may be useful to members who have joined during the past six years.

Objects of the Association

The Association has for its objects the promotion of medical and allied sciences and the maintenance of the honour and interests of the medical profession.

General Framework of Constitution

Division.—A Division comprises all the members in a defined area. The Association is in effect a federation of Divisions or local medical societies. For certain administrative purposes Divisions are grouped into Branches.

Representative Body.—Each year Divisions elect Representatives according to their numerical strength, and these form collectively the Representative Body. The Representative Body, which meets annually, is the governing body of the Association and decides its policy.

The Council, which is elected mainly by members in the Divisions and Branches and by the Representative Body, is the central executive body.

The British Medical Journal is the official organ of the Association, and its *Supplement* is one of the main channels of communication between the executive and individual members.

The Division

The vitality of the Association depends to a large extent on the activity of the Division. It works within a defined area, and all members of the Association in that area are *ipso facto* members of the Division. The Division elects its own chairman, secretary, and treasurer—all honorary officers—and makes its own rules of organization. Uniform rules governing procedure in ethical matters are in operation in every Division.

The main duties of the Division are: (1) To promote by meetings and other means professional collaboration and social relationships among its members; (2) to afford opportunities for the discussion of scientific matters; (3) to assist its members in maintaining a standard of ethics worthy of the profession; (4) to maintain locally the interests of the profession and to represent the profession in its relations with local authorities and other public bodies; (5) to make reports to the Central Council. Each Division appoints an Executive Committee to conduct its business, and an Ethical Committee. Other committees may be appointed to deal with particular subjects; most Divisions also have a Public Relations Committee with a public relations secretary.

At the time of the Annual Meeting of the Association a Conference of Honorary Secretaries is held to give Division and Branch secretaries an opportunity of exchanging views and making suggestions for the improvement of the Association's local machinery.

The Branch

Divisions are grouped in Branches for certain administrative purposes, which include the election of new members, the provision of funds for the Divisions, the management of those interests of Divisions which have become unorganized or inactive, and the arrangement of periodical scientific and social meetings for the members of all the Divisions in the area. A president, secretary, and treasurer are elected, and the executive work of the Branch is undertaken by a Branch Council composed of the Branch officers, members of the Central Council who represent the Branch or are resident in the Branch area, members elected by the respective Divisions of the Branch, a Public Health Service member or members, and representatives of the Local Medical and Panel Committees and of other local medical societies at the discretion of the Branch. The Branch Council appoints an Ethical Committee and such other committees as it desires.

The Representative Body

Except for certain matters relating to company law for which a general meeting of members is required, the governing body of the Association is the Representative Body, which meets once a year and may be convened as a Special Representative Meeting at other times. The Representative Body is composed of Representatives elected by constituencies made up of Divisions or groups of Divisions, members of Council for the time being in office or elected to take office, four representatives elected by Public Health Service members of the Association, and the Chairman and Immediate Past-Chairman of the Representative Body *ex officio*. It determines the policy of the Association and deals with questions of alteration of the Articles and By-laws. It considers the Annual Report of the Council, the annual financial statement, and motions submitted by the Divisions and Branches. Any resolution of the Representative Body relating to the policy of the Association in matters affecting the honour or interests of the profession or of the Association must, if the resolution is to rank as a decision of the Association, be carried by a majority of not less than two-thirds of the votes given. At least two months' notice in the *Journal* is required for motions proposing material alteration of, or addition to, the constitution or policy of the Association which are brought by Divisions or Branches before an Annual Representative Meeting, or a fortnight's notice if brought before a Special Representative Meeting.

The Representative Body elects the President of the Association, the Chairman and Deputy Chairman of the Representative Body, the Treasurer, 12 members of Council in grouped constituencies, 8 members of Council (elected by the Representative Meeting as a whole), and certain members of Standing Committees.

The Council

The Council is the central executive of the Association. It is responsible for the management of the affairs of the Association, including the *Journal*, subject to the decisions of Representative Meetings. Matters come before the Council on instructions from Representative Meetings, in reports of Committees, as representations from Divisions and Branches, as motions by members of Council, and in questions submitted by other bodies. It presents to the Annual Representative Meeting a report of its work during the year.

The Council, which is reconstituted each year, consists of up to a maximum of 68 members made up as follows:

(*a*) 10 members *ex officio*—namely: President, Immediate Past-President, and President-Elect of the Association, Chairman, Immediate Past-Chairman, and Deputy Chairman of the Representative Body, Chairman and Past-Chairman of the Council, Treasurer and Past-Treasurer;

(*b*) 22 members elected by the members of the Branches in Great Britain and Northern Ireland grouped for the purpose;

(*c*) 9 members similarly elected by the Branches not in Great Britain or Northern Ireland;

(*d*) 12 members elected at the A.R.M. by the grouped Representatives of the constituencies in Great Britain and Northern Ireland;

(*e*) 8 members elected at the A.R.M. by the Representatives acting together;

(*f*) 4 Service members, representing respectively the Royal Naval Medical Service, R.A.M.C., Medical Branch of the Royal Air Force, and Indian Medical Service, elected by the A.R.M. as a whole;

(*g*) 2 members elected by the Public Health Service members of the Association;

(*h*) 1 woman member elected by the women members of the Association.

The Council elects its own Chairman. It normally holds four meetings a year, and, in addition, two during the Annual Meeting of the Association.

Central Committees

Central committees are appointed by the Representative Body, by the Council, or by the two bodies jointly. Certain standing committees are appointed and constituted by by-law—e.g., General Practice, Special Practice, Hospitals, Insurance Acts, Public Health, Ethical. Most of the standing committees appoint subcommittees. Other special committees are appointed from time to time for particular purposes—e.g., to investigate a particular problem or to prepare a memorandum of evidence for a Government inquiry. All committees report periodically on their work to the Council and make recommendations.

Annual Meeting

At the time of the A.R.M. an Annual General Meeting is held to fulfil certain requirements of company law and to discuss scientific matters. It is open to all members of the Association. The scientific sections are an important event in the medical year. A section is devoted to each of several specialties or special topics and provides for one or more opening papers and a discussion. A president and secretary are appointed for each section. In addition, social functions and excursions are arranged for Representative and other members attending the meeting, which is held at a different place each year. Both the sections and the social functions have been suspended during the war, and all meetings have been held in London.

Groups of Members

The Council has power to form Groups of members of the Association who have in common professional interests sufficiently distinct from those of the general body of members, and who, by reason of their small numbers and/or nature of distribution, are not able to meet to discuss those interests or to express their opinion on them adequately through the Divisions and Branches. Each Group appoints a Group Committee to conduct its business. This committee reports to the Special Practice Committee of the Association, which in its turn reports to the Council. At present there are nine groups: for Consultants and Specialists, Spa Practitioners, Consulting Pathologists, Practitioners of Physical Medicine, Radiologists, Practitioners of Psychological Medicine, Full-time Non-professorial Medical Teachers, Ophthalmic Medical Practitioners, and Orthopaedic Surgeons.

Panel Conference

The Insurance Acts Committee of the Association calls an annual conference of representatives of Local Medical and Panel Committees, which are statutory bodies set up under the National Health Insurance Acts. The I.A.C. is the executive of the Panel Conference and is so recognized by the Ministry of Health. It consists of 42 members: 6 elected by the Representative Body, 27 by Local Medical and Panel Committees on a territorial basis, 6 by the Conference of Representatives of Local Medical and Panel Committees, and 3 nominees of outside bodies.

Negotiating Committee

The Association has co-operated with the Royal Colleges and other bodies to form a Negotiating Committee representative of the profession as a whole to conduct negotiations with the Government on the proposals for a National Health Service. The committee is composed as follows: 16 representatives of the B.M.A.; 3 of the Royal College of Physicians; 3 of the Royal College of Surgeons; 2 of the Royal College of Obstetricians and Gynaecologists; 3 of the Royal Scottish Medical Corporations; 2 of the Society of Medical Officers of Health; 1 of the Medical Women's Federation; 1 of the Society of Apothecaries. The Negotiating Committee reports from time to time to its constituent bodies to obtain approval of the action it has taken and observations on its report. It appoints subcommittees to consider special aspects of the health services.

Correspondence

Medical Demobilization

SIR,—May I add one more letter on the subject of release of doctors from the Services, so that I may give you my own experiences.

Being in age-and-service group 14, and having read the statement by the Secretary of the Central Medical War Committee (*Supplement*, June 23, p. 127), I was naturally under the impression that I should be released on some date between Sept. 10 and 22, when other Army officers and men will be released. Consequently I got a colleague to give me my medical examination and complete the necessary Army form. This form was sent to the A.D.M.S. with a covering letter asking for a definite date of release so that I may make arrangements for my refresher course, and so that I may inform my former patients of my return to my practice.

I have received a letter stating that it is regretted that the date of release cannot be given at present. The War Office have authorized the release of medical officers in age-and-service groups 1 to 11 only at the present time. Now, does this agree with the statement made by the Secretary of the C.M.W.C.? The C.M.W.C. should obtain a clear statement from the War Office on this subject of release so that serving officers might at least know where they stand.—I am, etc.,

WILLIAM J. LEDGERWOOD,
Captain, R.A.M.C.

SIR,—At a meeting of the Portsmouth Local Medical War Committee held on July 23 the following resolution was carried unanimously:

"1. This committee regards with great indignation the continued presence in this country, and particularly in the E.M.S., of many young men who are fit for recruitment."

"2. This committee would draw attention to the fact that there are many practitioners of military age who, suffering from minor disabilities, are not liable for general service, but who are quite competent to undertake duties in the Services at home or in the occupied countries, and that this reserve of medical man-power should be used in order to release long-service men in the Services.—I am, etc.,

E. COWPER TAMPLIN,
Hon. Secretary, Portsmouth Local Medical War Committee.

SIR,—What about ship surgeons? After service in ships carrying food, ammunition, troops, petrol, and passengers since January, 1943, I find that I have no "demob. group," I can expect no gratuity, and that I am apparently excluded from various schemes of medical "resettlement." I was recently offered my discharge from the Merchant Navy, but the C.M.W.C. informs me that if I accept it I shall be recruited for the R.A.M.C. Does anyone know how long I shall have to wait before I can accept my discharge?—I am, etc.,

"SHIP SURGEON."

SIR,—On this vexed question of medical demobilization I should like to make the following pertinent observations.

Those of us who have served in the Forces 4 to 5 years or more were predominantly volunteers. I myself, as many others did in those earlier years, agitated and worried my local B.M.A. secretary day after day until I was accepted for the Service of my choice—the Royal Navy. It would have been only too easy at that time, after only 6 months of house appointments, to have carried on with further such appointments until one became a so-called indispensable. I am quite certain every Service M.O. knows of several such cases. I am well aware of the fact that all young graduates were circularized with the information that after 6 months they would be classified. Those of us who volunteered expected this regulation to be enforced rigidly, but this was not so.

I can well appreciate the most difficult job that the Central Medical War Committee has to undertake at this time, and I am grateful for the efforts being made on our behalf. It indeed must be a nightmare keeping check of all young civilian doctors. In my opinion this should not be necessary; young doctors of "conscience and character" should *volunteer* and relieve their colleagues in the Services, who, in spite of less work to do, have borne "the burden and heat of the day" in the Services.

I am now nearly 30 years old; my knowledge of medicine is deteriorating; I have seen little of my wife and family, and, to crown everything, I am now told that our demobilization must lag behind our age-and-service groups. As one who volunteered I ask for fair play.

"VOLUNTEER."

SIR,—"Life Sentence's" letter (*Supplement*, July 14, p. 8) is couched in most moderate and restrained terms. At this stage in the war he is about to embark on a further unspecified length of oversea service in the Tropics after nearly 6 years of service away from home and family, 4 of these over-seas. When some of his civilian colleagues of similar age have, so far, not been separated at all from their families during the whole course of the war, the treatment meted out to this temporary medical officer constitutes a gross miscarriage of justice.

It is the prospect of such further continuous separation from their families and the possibility of not being released with their age-and-service group which make Service medical officers feel after so many years away from home that it is now the turn of others to experience such separation, if, indeed, the strength of the medical service of the armed Forces cannot substantially be diminished at the present time.

The difficulty of achieving release with age-and-service group has been alluded to by the Secretary of the Central Medical War Committee, who emphasizes that all possible avenues are being followed to realize this aim. He has, however, referred to the "irreplaceable" nature of certain doctors who have hitherto been deferred from military service. In point of fact very few doctors, including those in specialist, administrative, and even educational and academic spheres, can really be regarded as irreplaceable in a professional sense.—I am, etc.,

"FAIR PLAY."

The Medical Situation in India

SIR,—As medical superintendent of the Punjab Mental Hospital from 1922 until my retirement from the Indian Medical Service in 1941, and as the lecturer in mental diseases to the Medical College at Lahore for nearly the whole of that period, I beg that you will permit me to join in the correspondence initiated by Dr. M. N. Pai's article in the *Supplement* of June 2 (p. 100) and carried on by Dr. Rasheed Ahmad (June 16, p. 119).

It is undoubtedly true that the standard of education in "Western" medicine is very much below the standards in British medical schools. This was fully endorsed by the findings of the late Dr. G. C. Anderson and Sir Norman Walker when they inspected the medical schools of India a dozen years ago. Since then, for reasons indicated in Dr. Pai's article, the standards have been lowered rather than raised. It is also true that many Government officials, such as professors, medical superintendents of hospitals, public health officers, civil surgeons, etc., are appointed for political or communal reasons instead of on their individual merits. Moreover, as Dr. Rasheed Ahmad points out, many private practitioners with better qualifications and of greater experience struggle for existence, and have to compete with indigenous *vaids* and *hakims*. I do not think that Dr. Pai intended to convey the impression that scientific medicine is being carried out only by a small band of missionary doctors. He merely stressed the fact that the large attendance at their free clinics justified his belief that "the Indian masses demand medicine, not magic."

In the British Isles 1 in 800 of the population is a registered medical practitioner. The proportion in India is nearer 1 in 10,000. So it does seem, at first sight, that another of Dr. Pai's assertions has been sustained—namely, that the number of medical schools is insufficient: medical schools, that is to say, in the sense in which we understand them. The important point, however, is whether the general public or the politicians who rule India at present really want Western medicine. The issue is clouded by two factors, to which Dr. Pai, and also Beverley Nichols in his excellent *Verdict on India*, refer. These are the vilification of everything British and the elevation of everything indigenous to an altogether absurd degree in each case. One must also consider the element of self-interest. It is so easy to become a fully qualified *vaid* or *hakim* and so cheap. One can easily delude oneself into the conviction that the Indian really does want indigenous treatment.

During my service in the Punjab it certainly did appear that there was a demand for such treatment. Accordingly, an Ayurvedic School of Medicine was set up in Lahore, and the grant for maintaining that institution was provided from the Government allotment (already pathetically inadequate) for public health and medical services. The Punjab is a Muslim Province, and it was politically intolerable that a Hindu medical school should have been established in its capital; so honour could only be appeased by the inauguration of a Unani School of Medicine. Colonel Broome, a former professor of anatomy at the King Edward Medical College, used to relate the entertaining tale of how he was asked to recommend a professor of anatomy for this new school, as no *hakim* in the Punjab had ever seen a cadaver dissected! He said: "There's Banghi Khan, the sweeper who stitches up the bodies at the post-mortems, and clears up the mess!" This illiterate untouchable had his salary raised from 13 to 20 rupees a month (30s.), and was duly installed in the chair of anatomy as a brother professor!

With regard to my own branch of medicine, here are a few instances of the difficulties which confronted me during the two decades in which I struggled to ameliorate the lot of the Indian insane. As I was cycling down the private road which led to my mental hospital, I found one of my attendants fixing large yellow and black sheets of metal to the trees at regular intervals. These were the advertisements of a local *hakim*, urging misguided relatives to bring their mentally afflicted patients to the advertiser, instead of admitting them to the Government *paghalkhana* (madhouse). So much for the ignorant and uncultured, but do the intelligentzia want Western psychiatry? I believe the answer is in the negative. I have treated the wives of many Indian graduates, two or three of whom have taken higher medical qualifications in the U.K. In nearly every case indigenous methods had been given a "fair trial" first. The *vaid*, the *hakim*, the devil driver had all failed! One doctor (a former student of mine) naively remarked: "Sir, when I saw that fellow twist her long and beautiful black hair round his hand, and bang her head over and over again upon the stone floor, I thought that nothing my dear old professor could do would be worse than this, so I have brought her to you at last."

I agree with Dr. Pai that much requires to be done, but no British Governor would or could (as he suggests) declare the practice of indigenous medicine a criminal offence. The Vedas constitute the standard textbooks of the Ayurvedists, and the Vedas mean far more to a religious Hindu than the Holy Bible means to the average Christian: enough, at any rate, to create a very considerable outcry that the obnoxious British Governor is interfering with the religious rights which were guaranteed to Indians by Queen Victoria in 1858. The Governor of a Province is very much in the hands of his Ministers in matters of this sort; and, in the Punjab, so far from suppressing indigenous medicine, it has been encouraged. The same is true to an even greater extent in other Provinces.

The King Edward Medical College, to which Dr. Rasheed Ahmad refers, is a very grand building indeed, and it is certainly well equipped; but he ought to have seen the *paghalkhana*, as it was in 1922. It was as bad as the Bicêtre and Salpêtrière Asylums when Philippe Pinel reformed them in 1793, and worse than any of the British madhouses described in the Parliamentary Commissions' reports of a hundred years ago. I found the great majority of my patients naked and cowering behind bars, more like wild animals in a zoo than fellow human beings suffering from the saddest of afflictions. So far as conditions would permit, relatively modern methods of treatment were carried out forthwith, but it was 15 years before I could persuade the Government to build a hospital which could be called a modern mental hospital, and not a madhouse or menagerie. Fifteen years of ceaseless endeavour! And then they stirred. The new blocks of the Punjab Mental Hospital have been built without a single bolt or bar, and are probably the best in India or the Far East. I have heard recently that my "dream child" (with its gestation period of 15 years) was still going strong, and that no iron bars had yet been installed. However, there was a snag. The Government coveted the new buildings, and intended using them as Government offices! As I heard this I felt I could weep. And then I laughed instead. Physicians who have served their country have had many distinctions conferred upon them, but surely none has had the distinction of building a mental hospital into which an obtuse and obstructive Indian Government has decided, voluntarily and not inappropriately, to admit itself!—I am, etc.,

C. J. LODGE PATCH, *M.C.*,
London, W.1. Lieut.-Col., I.M.S. (retd.).

War Gratuities

SIR,—I have been glad to read in recent copies of the *Journal* letters pointing out the inequality between the gratuity granted to regular short-service commissioned officers and emergency commissioned officers. In case some serving doctors are not aware of the position I shall restate it.

In peacetime a doctor could join the R.A.M.C. with a short-service commission which entitled him to retire at the end of 3 years' service with a gratuity of £500, or at the end of 5 years' service with a gratuity of £1,000. The short-service commissioned officer has gone on earning this gratuity during wartime. In wartime a doctor who joins the R.A.M.C. is given an emergency commission, and at the end of 3 or 5 years' service is entitled to a gratuity which is a fraction of that offered to the short-service commissioned officer for the same period. It is a great tribute to the lack of self-interest in our profession that we have accepted this strange state of affairs so quietly. It is not, however, a tribute to the interest which the B.M.A. takes in our affairs that it appears to have done nothing to correct this anomaly. It tends to make one have doubts about the results of its negotiations over the remuneration of doctors under a State medical service.

Doctors as a rule have a rather poor grasp of economics. It is therefore probably worth while pointing out just what is involved in this gratuity business. The gratuities and terms of service offered to R.A.M.C. doctors by the Government during peacetime are not offered because the Government likes doctors or thinks they are good chaps. They are the minimum rates of pay and gratuities which the Government can offer to maintain the requisite numbers of the R.A.M.C. in peacetime. It was a very finely calculated rate; in fact, it had been made rather too finely, as the authorities were just failing to get the requisite numbers. It represents the value to the Government of a fairly inexperienced young doctor. When the war is on, either because doctors volunteer for service or because they are compelled to serve, the Government is able to satisfy the Army's demand for doctors without any reference to the value of doctors. The result is that although the authorities have fixed a peacetime value of doctors, they immediately depart from that standard simply because they can force the supply.

It does not give one the impression that the Government is much interested in fair treatment of doctors. It does give a very fair indication of the methods which would be employed if the Government had full control of doctors in peacetime. The situation could be righted if the B.M.A. was really interested in remuneration of doctors and if it was prepared to resist unfairness of this kind, instead of at the best making a weak protest.

I would like to say a few words about the letter written by Surg. Lieut.-Cmdr. C. J. Robarts (*Supplement*, March 31), as, superficially, it appears reasonable. He is correct in saying that it is no good agitating because someone else is better off than oneself if the only result is that both parties are reduced to the lower level, but, as he has really shown, that danger does not exist in this case, as the short-service officers have a definite contract. He says that the raising of the gratuity of emergency-commissioned officers R.A.M.C. would give non-medical officers and men a legitimate grievance. This is a common argument, but those who put it forward should consider further. If this is a legitimate grievance it is an old-standing one. Regular commissioned officers other than R.A.M.C. officers had no opportunity of retiring at the end of 5 years' service with £1,000 gratuity, but I cannot remember this grievance being aired, and certainly not by short-term commissioned R.A.M.C. officers. The basic fact is the economic one already mentioned. The Government could get an adequate supply of general officers and men for the Army on much cheaper terms than it could get doctors. It therefore gave them those terms. An interesting point is that in all these cases it has improved those terms during wartime; in the R.A.M.C. alone has the remuneration been lowered during the war.

This comparison of different branches of the Services is, however, not really to the point. By the standards of the infantryman, risking his life daily slogging through Burma, I, sitting in relative comfort 20 miles behind him, am grossly overpaid; so also is Surg. Lieut.-Cmdr. Robarts, but we cannot do much about it. Our claim should not be stated as a comparison with other branches of the Services or with other individuals in the same branch, but in the question to the Government: You have laid down terms of remuneration for doctors in peacetime; why have you reduced those terms in wartime?

In conclusion I would like to point out how valuable this gratuity would be for post-war study. Much has been written about refresher courses. Personally I have maintained a good up-to-date library throughout the war; even in Burma I have had leisure for reading, so that I have maintained my theoretical knowledge at a higher level than I would have in hospital or general practice. I have also had opportunities to practise the art of medicine, so that I neither need nor want a refresher course, but I would like a wider view of medicine, especially that got from study abroad, and I feel certain that those who feel like me and those who want refresher courses will be able to arrange these things for themselves with the £1,000 gratuity in a much more satisfactory way than by using the Government post-war medical education scheme.—I am, etc.,

EDGAR RENTOUL.

Mileage Payments to Doctors

SIR,—I am sorry if I appear to be rather hammering on this point, but it appears that all official mileage payments are still calculated on the basis of 6d. a mile "one way," without any payment for the first 2 miles—i.e., 1s. 6d. for 5 miles distant, a 10-mile journey. My definite expenditure last year, not including depreciation or the equivalent saving towards buying new cars, worked out to the figure of a fraction under 5d. a mile.

The only reference which I can find to this matter in the *Journal* is a vague promise or suggestion that travelling expenses should be 10% more than pre-war. My motoring is 100% more expensive than it was before the war. This is a statement of fact. In the meantime, because of the dilatory recognition of this obvious injustice, we are quickly piling up a debt against all those who are employing us outside our private practice which will never be repaid.

When will the absurd contention that journeys within a 2-mile radius cost nothing be refuted? A car would still be just as necessary and cost just the same if doctors worked in a circle of 4 miles in diameter: and, further, the first 2 miles is by far the most expensive part of a journey by car. There is no point in answering me by assuming that our journeys are often shared between several calls—because the same rate is offered for emergency calls. Our mileage payments ought to be double the pre-war rate.

There is one way in which the Government could repay us what is owed—that is, by making cars available to us without purchase tax. After all, we are performing the duties of an essential service, and have done so, under great difficulties, all through the war. It would not be and is not fair to put the extra expenses to which we have been subjected on to the fee-paying patients, but this appears to be the only way in which to compensate ourselves at present.

If the emoluments which the profession are to receive under a National Health Service are to be calculated in the same kind of way as I have indicated, we are truly in for a very bad time indeed.—I am, etc.,

Coldingham. F. O. TAYLOR.

POSTGRADUATE NEWS

An intensive course in industrial health will be held at the Birmingham Accident Hospital and Rehabilitation Centre from Monday, Aug. 27, to Saturday, Sept. 8, with lectures at 9.30 a.m., 10.20 a.m., 11.30 a.m., and 2 p.m. until 5 p.m. (approximately) from Monday to Friday each week. On Sept. 1 there will be a discussion on the week's work and on Sept. 8 a final discussion on the whole course, the fee for which is £10 10s. The course is primarily intended for Service medical officers on leave, for those recently demobilized, and for others who wish to take up the industrial health branch of medicine, and will be for the most part practical in nature. Numbers are limited and applications to join the course should be sent to the hospital secretary (A. A. MacIver, Bath Row, Birmingham, 15), from whom full particulars may be obtained.

B.M.A.: Branch and Division Meetings to be Held

SOUTHERN BRANCH.—At the Castle, Winchester, Thursday, Aug. 30, 3 p.m. 69th annual general meeting. Agenda: Election of President-Elect, etc.

WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—At Clayton Hospital, Sunday, Aug. 26, 11 a.m., Postgraduate Lecture by Dr. Leslie Watson: Benign Circumscribed Pneumonia; Pneumokoniosis.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTHS

COOKE.—On July 11, 1945, to Dr. H. B. J. Cooke (*née* Rose), wife of Dr. M. A. Cooke, of Selborne Villas, Bradford, a daughter.

HORTON.—On July 20, 1945, at Connaught Road Nursing Home, Cardiff, to Daphne (*nee* Payne), wife of Capt. E. H. Horton, R.A.M.C., a son.

LYONS.—On July 27, 1945, to Maisie (*née* McSparran), wife of S. E. C. Lyons, M.B., D.P.H., Newtown Street, Strabane, Co. Tyrone, a son.

MARRIAGE

STAREY—HORTON.—On July 14, 1945, at Chilham, Kent, Christopher J. H. Starey, B.M., to Phyllis M. Horton, S.R.N., of Shottenden.

DEATH

DAVIES.—On Aug. 2, 1945, John Davies, M.D., M.R.C.P., Surg. Cmdr., R.N.V.R., beloved husband of Gwladys, 308, Finchley Road, N.W.3, and father of David and Shirley.

The Choice of an Antacid

THE serious disadvantages attending the administration of alkalis in the treatment of the dyspepsias are now well recognised. Recent reports, however, have again confirmed that the use of aluminium hydroxide obviates the secondary rise of acidity and the danger of 'alkalosis' which are associated with alkali treatment.

'Alocol' (a specially prepared colloidal aluminium hydroxide) is rapidly replacing alkaline medicaments as a routine in the treatment of peptic ulcer and conditions associated with hyperchlorhydria.

'Alocol' neutralises excess gastric acidity to the most favourable degree without provoking the danger of 'alkalosis,' thus producing a markedly soothing effect on the gastric mucosa, with the prompt relief of pain and discomfort.

'Alocol' is available in powder and Tablet form.

Powder—*The normal dose is 1 gramme before and after meals.*

Tablets—*Each tablet contains Alocol, 0.5 gm.; P. Sacch. Alb., 0.4 gm.; Cocoa Powder, 0.035 gm.; Excipient, q.s. The normal dose is 2 tablets before and after meals.*

Complete chemical history of 'Alocol' with convincing clinical reports and supply for trial sent free on request.

A. WANDER Ltd.,
London, S.W.7.

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.

B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.

A—Whole-time resident house appointments open to practitioners without previous experience.

B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

MINISTRY OF PENSIONS. Queen Mary's (Roehampton) Hospital, London, S.W.15.—Applications are invited from registered medical practitioners, men and women, including R and W practitioners who already hold A posts, for appointment as HOUSE SURGEON (B2) at the above hospital. The appointment offers opportunities for experience in general and orthopaedic surgery. If held by an R practitioner the appointment will be limited to six months. Salary £300 per annum, plus Civil Service war bonus and free board and lodging or an allowance of £100 if permission is given to live out. Applications should be addressed to the Secretary, Ministry of Pensions, Medical Services Division, Norcross, Blackpool, Lancs.

PRISON SERVICE—MEDICAL STAFF.—Applications are invited for the post of WOMAN MEDICAL OFFICER at H.M. Prison, Holloway, London, to assist the other medical officers. Salary is £650 per annum plus a temporary war bonus of (at present) £48 per annum. Annual leave, normally six weeks but rstricted at present to 24 days. The post is unestablished, but this will be subject to review after the war. Forms of application may be obtained from the Prison Commission (Establishment Branch), Kensington Mansions, Trebovir Road, Earl's Court, London, S.W.5.

BOROUGH GENERAL HOSPITAL, Shirley Warren, Southampton. JUNIOR RESIDENT MEDICAL OFFICER (LOCUM TENENS) (A).—Applications are invited from medical practitioners, male and female, for appointment as Locum Tenens Junior Resident Medical Officer, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months, otherwise it will not exceed one year. The fees payable will be £8 8s. per week, plus board-residence. Applications should be addressed to the undersigned immediately.—H. C. Maurice Williams, Medical Officer of Health, Civic Centre, Southampton.

CORPORATION OF GLASGOW. MEDICAL OFFICER OF HEALTH.—Applications are invited for the post of Medical Officer of Health for the City of Glasgow from qualified medical practitioners who are registered in the *Medical Register* as holders of a Diploma in Sanitary Science, Public Health, or State Medicine. The Medical Officer of Health is also Port Medical Officer for the Port of Glasgow. The duties comprise the administration of all the statutory health and sanitary services of the Corporation. The post is due to fall vacant at the end of March, 1946, and the new Medical Officer of Health will be expected to take up duty at the beginning of April, 1946, or as soon thereafter as possible. Salary at the rate of £1,500 per annum, rising by annual increments of £50 to £2,000 per annum, plus war increase, and with £50 per annum additional for Port duties. The appointment is subject to the provisions of the Corporation's Superannuation Scheme, and the successful candidate will be required to pass a medical examination. In order to allow time for candidates now abroad or in H.M. Forces to apply, the last date for receipt of applications has been fixed for October 1, 1945.—William Kerr, Town Clerk, City Chambers, Glasgow.

CITY OF BIRMINGHAM. Yardley Green Road Sanatorium (335 beds). TEMPORARY ASSISTANT RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered male medical practitioners for the above appointment. In addition to his duties at the Sanatorium, the successful candidate will be required to undertake duties at the Anti-tuberculosis Centre. Candidates should have held a resident hospital appointment and an appointment in some institution recognized for the treatment of tuberculosis. Suitably qualified R practitioners now holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The commencing salary will be at the rate of £450 per annum, rising by £25 to £600 per annum, plus emoluments. Applications should be addressed to the Chief Clinical Tuberculosis Officer, 151, Great Charles Street, Birmingham, 3, not later than August 31, 1945.

CITY OF CHESTER. City Hospital.—Applications are invited from registered medical practitioners for the appointment of RESIDENT MEDICAL OFFICER (B2) at the above hospital. Salary at the rate of £200 per annum, with full residential emoluments and temporary war bonus. R practitioners holding A posts may also apply, when appointment will be limited to six months, otherwise will not exceed one year. Applications for this appointment should be sent immediately to the Medical Officer of Health, Town Hall, Chester.

BRITISH MEDICAL ASSOCIATION. ASSISTANT SECRETARIES.—The Council of the British Medical Association invites applications from registered medical practitioners, including those serving with H.M. Forces, for two appointments of Assistant Secretary. The practitioners appointed will at the outset work at B.M.A. House in London, but they may subsequently be transferred to regional offices outside London. The salary for each post will be at the rate of £1,000 a year, rising by annual increments of £50 to £1,500 a year, plus cost-of-living bonus. The Association's superannuation scheme will apply to the posts. The successful candidates will be expected to take up duty on February 1, 1946, or on demobilization. There is no special form of application, and applications, with full particulars of qualification, experience, age, etc., together with the names and addresses of three persons to whom reference may be made, should be sent to the Secretary of the British Medical Association, Tavistock Square, London, W.C.1, to arrive not later than December 8, 1945.—Charles Hill, Secretary.

COUNTY BOROUGH OF WEST HAM. Whipps Cross Hospital. TEMPORARY RESIDENT ASSISTANT MEDICAL OFFICER.—Applications are invited from registered medical practitioners, male and female, for the post of Temporary Resident Assistant Medical Officer (B1) at Whipps Cross Hospital, Leytonstone, E.11. Suitably qualified R and W practitioners holding B2 appointments may apply. R practitioners holding B1 appointments cannot apply unless they have been rejected by the R.A.M.C. Salary for the post is £350 per annum, rising by annual increments of £25 to a maximum of £450 p.a., plus a temporary war bonus, with apartments, board and laundry, valued for superannuation purposes at £100 per annum. The salary is inclusive, and all fees received from whatever source must be paid to the Council. Candidates must be fully qualified registered medical practitioners, and should have held a previous resident hospital appointment. Preference will be given to candidates with practical experience of surgical operations, and the person appointed must give his or her whole time to the service of the Council, and will be required, should the occasion arise, to act in any of the Council's other institutions. The appointment will be subject to the Council's regulations as made from time to time regarding holidays, sick pay, etc., and the successful candidate will be required to pass a medical examination. Forms upon which application must be made can be obtained from Dr. E. Ashworth Underwood, Medical Officer of Health, 223-225, Romford Road, West Ham, E.7, on receipt of a stamped addressed envelope, and returned to him not later than September 3, 1945. Canvassing members of the Council is prohibited and will disqualify.—Charles E. Cranfield, Town Clerk, Town Hall, West Ham, E.15.

CITY OF MANCHESTER. Crumpsall Hospital (1,400 beds.) (Recognized under the regulations for the F.R.C.S.). RESIDENT ASSISTANT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the above-mentioned post, which is vacant now, including R practitioners who now hold A posts. If held by an R practitioner the appointment will be for a period of six months, otherwise it will be for a period of twelve months. The duties of the post are entirely medical. The basic salary for the appointment is £250 per annum, with board, residence and laundry in addition, subject to the Manchester Corporation conditions of service. A temporary cost-of-living wages addition is payable in addition to the salary stated, and the present annual cash remuneration is £280 in the case of a male officer, and £274 2s. 6d. in the case of a female officer. Applications are to be addressed to the Medical Superintendent, Crumpsall, Manchester, 8, at once. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

YORK COUNTY HOSPITAL (222 beds).—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (A), vacant September 22, 1945, whose main duties are in the Eye, Ear, Nose and Throat Department (37 beds with busy Outpatient Clinics), but who will share in the general work of the hospital, also Casualty Duty, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary is at the rate of £175 per annum, with full residential emoluments. This post is recognized for D.O.M.S. and D.L.O. examinations. Applications to be sent to the undersigned immediately.—J. R. Mackrill, Secretary.

CITY OF MANCHESTER. Withington Hospital (1,150 beds). TEMPORARY RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners, male or female, for the appointment of Temporary Resident Surgical Officer (B1), which will become vacant towards the end of 1945 at the above-mentioned hospital, when the present officer is expected to be recruited into H.M. Forces. Candidates should hold a higher qualification in surgery and have had previous experience in resident hospital posts. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Basic salary £475 per annum, but further increments of £25 to a maximum of £550 may be granted at the discretion of the Council. Full residential emoluments valued at £150 are additional to the salary stated. A temporary cost-of-living wages addition, amounting at present to £60 p.a. in the case of a male officer and £48 5s. p.a in the case of a female officer, is also payable in addition to the salary stated, but will be apportioned as between cash salary and emoluments. The appointment is subject to the Manchester Corporation conditions of service. Full information and forms of application may be obtained from the Medical Officer of Health, Hospitals Administration Section, G.P.O. Box 399, Town Hall, Manchester, 2. Applications for the post must be forwarded to me only, and not to members of the Committee or the Council, not later than August 30, 1945. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

COUNTY BOROUGH OF WEST HARTLEPOOL. Public Assistance Committee. Howbeck Infirmary and Emergency Medical Services Hospital (350 beds).—The Public Assistance Committee invite applications from registered male or female medical practitioners for the appointment of ASSISTANT MEDICAL OFFICER (resident) (B1). Salary will commence at £350 per annum, and will rise by annual increments of £25 to a maximum of £450 per annum, together with usual residential emoluments valued for superannuation purposes at £125 per annum. Suitably qualified R or W practitioners holding B2 appointments are invited to apply. Applications from R or W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The successful candidate will be required to devote his or her whole time to the service of the Corporation and to carry out the instructions of the Medical Superintendent. Applications should be received by the Public Assistance Officer, Avenue Road, West Hartlepool, as soon as possible.— E. J. Waggott, Town Clerk, Town Clerk's Office, West Hartlepool.

CORNWALL COUNTY COUNCIL.—Applications are invited from registered medical practitioners for the whole-time appointment of a TEMPORARY ASSISTANT COUNTY MEDICAL OFFICER to reside in or near the City of Truro. The person appointed will be required to work under the direction of the County Medical Officer, and must be qualified to treat patients suffering from venereal disease. The duties will include the taking of such venereal disease clinics as the County Medical Officer may direct, the supervision of the Rural Practitioners' Scheme for the treatment of venereal disease, and any other work not necessarily connected with venereal disease treatment as may be required from time to time by the County Medical Officer. The commencing salary will be £750 per annum, rising by three biennial increments of £50 and one of £37 10s. to £937 10s. per annum, together with a travelling allowance in accordance with the County scale. The duties of the person appointed will be reviewed within two years of the appointment. Persons already in whole-time Public Health employment by local authorities are not eligible to apply. Applications should reach the County Medical Officer, County Hall, Truro, not later than September 1, 1945. The appointment is approved by the Ministry of Health.—L. P. New, Clerk of the County Council, County Hall, Truro.

CAMBRIDGE COUNTY COUNCIL. County Hospital.—Applications are invited for the post of RESIDENT OBSTETRIC OFFICER (B2) at the above hospital. The appointment is limited to six months. Salary is at the rate of £250 a year, with full residential emoluments. R and W practitioners holding A posts may apply.

Applications are also invited from registered medical practitioners, male and female, for the post of HOUSE PHYSICIAN (A). Salary £150 a year, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months, otherwise not exceeding one year. Applications should be sent at once to the Clerk of the Cambridgeshire County Council, Shire Hall, Castle Hill, Cambridge.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10.

COUNTY BOROUGH OF WALSALL, Manor Hospital (400 beds).—Applications are invited from registered medical practitioners, male and female, for the appointments of:

RESIDENT ANAESTHETIST (B2). The salary is at the rate of £350 per annum, rising by £25 to £425 per annum, with full residential emoluments. R practitioners who now hold A posts may apply, when appointment will be limited to six months, otherwise it will be for a period not exceeding four years.

JUNIOR ASSISTANT MEDICAL OFFICER (A). Salary is at the rate of £200 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise twelve months.

The officers appointed will act under the direction of the Medical Superintendent, and perform such other duties as may be required. Applications should be sent to the undersigned not later than August 31, 1945.—James A. M. Clark, Medical Officer of Health, Council House, Walsall.

COUNTY COUNCIL OF THE STEWARTRY OF KIRKCUDBRIGHT.—Applications are invited for the temporary post of ASSISTANT MEDICAL OFFICER OF HEALTH, male or female, in the Public Health Department of the County Council of the Stewartry of Kirkcudbright. Applicants should be registered medical practitioners, and preference will be given to applicants holding the Diploma in Public Health. Salary £600 per annum, with, in addition cost-of-living bonus, at present £60 per annum (male) or £48 per annum (female). The person appointed will require to provide and maintain a motor car, in respect of which a travelling allowance will be paid. Applications should be lodged with the County Clerk, Kirkcudbright, not later than August 31, 1945.

EAST RIDING COUNTY COUNCIL. Driffield Emergency Hospital (324 beds).—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1), vacant immediately. The hospital provides experience in general surgery. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary from £350 to £550 per annum according to qualifications and experience, together with full residential emoluments. Applications should be forwarded so as to reach the undersigned as soon as possible.—T. Stephenson, Clerk of the Council, County Hall, Beverley.

SOUTH-EASTERN COUNTIES OF SCOTLAND JOINT SANATORIUM BOARD, East Fortune Sanatorium.—Applications are invited for the temporary post of RESIDENT MEDICAL SUPERINTENDENT of East Fortune Sanatorium (meantime accommodated at the Annexe, Bangour). Salary scale £1,000 to £1,200, plus J.I.C. bonus, free house, etc. The post is normally a permanent one, but, in terms of the approval granted by the Secretary of State for Scotland, the appointment will, in the first place, be on a temporary basis. The person appointed will be eligible for the permanent post at a later date. Terms and conditions of the appointment may be obtained from the subscriber, with whom applications, giving full particulars as to age, qualifications, and experience in tuberculosis work should, along with 15 copies of not more than three testimonials, be lodged not later than Sept. 4, 1945.—James McBoyle, Secretary, County Rooms, George IV Bridge, Edinburgh.

WEST RIDING OF YORKSHIRE HOSPITALS BOARD. Pinderfields Emergency Hospital, Wakefield. RESIDENT HOUSE SURGEON (A and B2).—Applications are invited from registered medical practitioners, male and female, for the appointment of a House Surgeon (A), the position now vacant, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. The salary, together with full residential emoluments, will be at the rate of £120 per annum.

Applications are also invited from registered medical practitioners, male and female, for the appointment of a RESIDENT HOUSE SURGEON (B2), the position now vacant, including R practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will be for a period not exceeding one year. The salary, together with full residential emoluments, will be at the rate of £200 per annum.

The hospital can accommodate some 1,300 service and civilian patients and, in addition to pro- a special Thoracic Surgery and large Orthopaedic centre. The main duties will be undertaken in the Ear, Nose and Throat, Orthopaedic, and Casualty Departments.

Applications to be submitted to the Medical Superintendent, Pinderfields Emergency Hospital, Wakefield, forthwith.—G. L. Banner, Clerk of the Board, Board Offices, Victoria Chambers, Wood Street, Wakefield.

MIDDLESEX COUNTY COUNCIL. TEMPORARY DISTRICT MEDICAL OFFICER and PUBLIC VACCINATOR, Yiewsley and West Drayton Medical Relief district.—The County Council invites applications from registered medical practitioners for the above appointment. District Medical Officer (average number of cases 6 per annum). Salary at least £50 per annum, and as a wartime measure only a payment equivalent to 20% of salary in respect of additional practice expenses, plus cost of expensive drugs, confinement fees and for services of another medical practitioner to administer short anaesthetics for minor operations. Duties in accordance with the Public Assistance Order, 1930, of the Minister of Health, reside in the district unless the Council otherwise determines, and nominate a deputy to act in his unavoidable absence. Public Vaccinator. Must produce to the Council a certificate of proficiency in vaccination, except in a case in which such certificate was required as a condition of obtaining any diploma, licence, or degree which he possesses; will be required to enter into a contract with the Council in accordance with the Vaccination Order, 1930, of Minister of Health. Contract will provide for the payment of the scale of fees laid down by the County Council. Applications must reach the undersigned by September 1, 1945.—C. W. Radcliffe, "Z," Clerk of the County Council, Middlesex Guildhall, Westminister, S.W.1.

MIDDLESEX COUNTY COUNCIL.—SURGEON REQUIRED at ASHFORD COUNTY HOSPITAL, Middx. (late Staines County Hospital). Applicants must be registered medical practitioners with higher degree or diploma in surgery, who have devoted their time wholly or chiefly to practice of surgery. Commencing salary between £650 and £950 p.a. according to experience, plus war bonus (now £60 p.a.). Non-resident, but surgeon appointed must live near hospital. Whole-time unestablished appointment, subject to medical examination and three months' notice Salary is inclusive; any fees received must be paid to County Council. Surgeon appointed will take share in general-surgery of hospital, his duties, such as Council may require, will be, under general supervision of Medical Director, and may include teaching. Post vacant early September. Application to the undersigned. Application forms not provided. Closing date August 25, 1945.—C. W. Radcliffe, "Z," Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL. JUNIOR ASSISTANT MEDICAL OFFICER (Anaesthetist (B2), Resident), required at CHASE FARM HOSPITAL, Enfield, Middx.—Applications invited from registered medical practitioners, including R practitioners now holding A posts. Salary £350 p.a. Board, lodging and laundry. War bonus (now £60 p.a., proportion only in cash). Whole-time duties such as Council may direct, under supervision of Medical Director. Appointment, subject to medical examination and one month's notice, is for six months, with possibility of extension to twelve months (except R practitioners). Post now vacant. Applications to Medical Director, "Z," of hospital. Application forms not provided. Closing date September 1, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

NOTTINGHAMSHIRE COUNTY COUNCIL. County General Hospital, Worksop. RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners for the appointment of Resident Surgical Officer (B1), to become vacant shortly. Applicants should have held house appointments and had surgical experience. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The salary will be at the rate of £350 per annum, with £75 per annum in lieu of emoluments.

HOUSE SURGEON (B2).—Applications are also invited from registered medical practitioners, male and female, for the appointment of House Surgeon (B2), now vacant, including R and W practitioners who now hold A posts. If held by an R or W practitioner the appointment will be limited to six months, otherwise it will be for a period of twelve months, but may be terminated in the meantime by one month's notice. The salary is at the rate of £300 per annum, with full residential emoluments.

Applications for each post should be submitted forthwith to the County Medical Officer, Shire Hall, Nottingham.—K. Tweedale Meaby, Clerk of the County Council.

SURREY COUNTY COUNCIL. Kingston County Hospital (500 beds), Wolverton Avenue, Kingston-on-Thames.—Applications are invited from registered medical practitioners, male and female, for the appointment of ANAESTHETIST (B1). The position is temporary and is subject to one month's notice on either side. Preference will be given to candidates holding D.A. qualification. Suitably qualified R and W practitioners now holding B2 posts are invited to apply. Applications from R practitioners holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £550 per annum plus war bonus plus full residential emoluments. Apply to Medical Superintendent by September 7, 1945.

KENT COUNTY COUNCIL. County Hospital, Pembury (750 beds). HOUSE SURGEON (A).—Applications are invited from registered medical practitioners, male, for the above appointment. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise it will not exceed one year. The salary is £200 a year, plus a temporary war addition of £29 19s. 7d., with full residential emoluments. Superannuation can be arranged, and the successful candidate will be required to pass a medical examination.

REGISTRAR FOR CHILDREN'S UNIT (B1).—Applications are invited from registered medical practitioners, male, for the above appointment. Applicants should have had previous hospital experience. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The salary is £350 to £450 a year by increments of £25, with full residential emoluments, plus a temporary war addition at present £29 19s. 7d. a year.

Applications for each post should be addressed to the County Medical Officer, County Hall, Maidstone so as to reach him by August 28, 1945.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

LANCASHIRE COUNTY COUNCIL. Wrightington Hospital, near Wigan.—Applications are invited for JUNIOR MEDICAL OFFICER (B2) at the Wrightington Hospital, containing 370 beds (260 beds for non-pulmonary tuberculosis (adults and children), 20 beds for "combined" pulmonary and non-pulmonary cases, and 70 beds for pulmonary cases). The medical staff consists of medical superintendent, three assistants, two consultant orthopaedic surgeons, other visiting surgeons and visiting physician. Excellent facilities for reading for M.D. Salary £300 per annum, plus bonus, together with board, single quarters, and laundry valued at £146. R and W practitioners who now hold A posts may apply, when appointments will be limited to six months, otherwise one year. Forms of application and conditions of appointment from Central Tuberculosis Officer, County Offices, Preston. Mark letters "Wrightington M.O."

ADDENBROOKE'S HOSPITAL, CAMBRIDGE. HOUSE PHYSICIAN (A).—Applications are invited from registered medical practitioners, male and female, for the appointment of House Physician (A), to become vacant on October 1, 1945, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts appointment will be for a period of six months only, which is the normal period of appointment. Salary is at the rate of £130 per annum, with full residential emoluments. Applications should be sent to the undersigned not later than Wednesday, August 29, 1945.—J. A. Beardsall, Secretary-Superintendent.

ASHINGTON HOSPITAL, Ashington, Northumberland.—Applications are invited from registered medical practitioners for the appointment of two HOUSE SURGEONS (A), now vacant, including practitioners within three months of qualification who are liable to serve under the National Service Acts. If held by practitioners who are liable under these Acts, the appointment will be for a period of six months. Salary is at the rate of £100 per annum, with full residential emoluments. Applications to be made to the undersigned.—A. Anderson Bonar, F.R.C.S.Ed., Medical Superintendent.

RADCLIFFE INFIRMARY, Oxford.—The Radcliffe Infirmary, Oxford, invites applications for the post of TEMPORARY NEUROLOGIST. The holder of the appointment will also be attached, in a consulting capacity, to associated hospitals in the Oxford area, and he will be expected to teach in the Oxford University Medical School. He will also assist the Ministry of Pensions in connexion with a scheme for the treatment and rehabilitation of Service patients suffering from the effects of head injuries. Emoluments, including payments from the Ministry of Pensions, supplemented by a contribution from the Nuffield Provincial Hospitals Trust, will amount to £2,000 per annum, with superannuation. Private practice for personal gain will not be permitted. The Nuffield Provincial Hospitals Trust propose to make a grant in support of research and ancillary services in connexion with the scheme. Applicants must be under 50 years of age, and preference will be given to those with special experience of head injuries. Applications should reach the Administrator of the Radcliffe Infirmary, Oxford, by September 15, 1945, accompanied by the names of referees. Applications by cablegram will be accepted from Service personnel. Further information can be obtained from the Administrator.

RADCLIFFE INFIRMARY, Oxford.—Applications are invited from registered medical practitioners for the post of GRADUATE ASSISTANT IN PATHOLOGY. Applicants should have held house appointments, and postgraduate experience in pathology, although desirable, is not essential. The appointment is for one year in the first instance, with the possibility of renewal, and the salary will be on a scale between £350 and £500 per annum, according to qualifications and experience. R practitioners should obtain the approval of the Central Medical War Committee to their application. Applications must reach the undersigned not later than the first post on Monday, August 27, and must be accompanied by a full statement of qualifications and the names of not more than three referees. Testimonials are not required. Preference will be given to candidates discharged from H.M. Forces.—A. G. E. Sanctuary, Administrator.

ROTHERHAM HOSPITAL, Doncaster Gate, Yorkshire. General Voluntary Hospital (150 beds). HOUSE PHYSICIAN (A), salary £225 per annum, with full residential emoluments. Applications are invited from registered medical practitioners, male or female, for the above appointment, which will become vacant shortly. Practitioners within three months of qualification who are liable to service under the National Service Acts may also apply, when the appointment will be for six months. Applications should be sent at once to the Secretary-Superintendent.

ROYAL WEST OF ENGLAND SANATORIUM AND E.M.S. HOSPITAL, Weston-super-Mare, Somerset (172 beds).—Applications are invited from medical practitioners for the appointment of HOUSE PHYSICIAN (A). Duties to commence September 1. Salary is at the rate of £200 p.a., with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may also apply, when the appointment will be for a period of six months. Applications should be addressed to Leslie J. Fursland, Secretary.

ROYAL HALIFAX INFIRMARY (Class 1A, E.M.S.) (250 beds).—Applications are invited for the post of RESIDENT SURGICAL OFFICER (B1), male. Salary £250 per annum, with residence, board and laundry. Preference given to one holding the F.R.C.S. R practitioners who now hold B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Applications should be sent to the undersigned immediately.— A Midgley, Secretary.

ROYAL PORTSMOUTH HOSPITAL, Portsmouth. —Applications are invited from registered medical practitioners (male) for the appointment of HOUSE PHYSICIAN AND HOUSE SURGEON (B2), now vacant. Wagstaff, Secretary.

ROYAL MASONIC HOSPITAL, Ravenscourt Park, London, W 6. Vacancies on the Medical and Surgical Staff.—The Board of Management of the Royal Masonic Hospital give notice that there will be several vacancies on the Medical and Surgical Staff, caused by retirements by reason of age of some members of the present staff. The new appointments will be made at the end of 1945, and applications are invited from Fellows of the Royal College of Physicians of London or Fellows of the Royal College of Surgeons of England, as the case may be. The candidates must be engaged in consulting practice, be well established in their profession, and be members of the staff of a recognized London teaching hospital or special hospital. Applications are required to be received at the latest by the end of October, 1945, and this slightly extended date should be noted. They should be made informally, without detailed copies of either testimonials or applications. They may be sent in the form of a cablegram should the candidate be at present serving over-seas. If a successful candidate was serving actively in one of His Majesty's Forces, or was a prisoner of war, the Board of Management would be willing to arrange for him to take up his appointment at the Royal Masonic Hospital when he was released from the Services. The vacancies to be filled are as follows: PHYSICIAN, GENERAL SURGEON, GYNAECOLOGICAL SURGEON, GENITO-URINARY SURGEON, ORTHOPAEDIC SURGEON, and a PHYSIOTHERAPIST. There will also be a vacancy for an ANAESTHETIST. Candidates for the vacant post of Anaesthetist must be devoting themselves entirely to the practice of Anaesthesia. The retiring age for all these posts is 60. The number of beds in the hospital is 200 to 220, of which 150 beds during the war were given over to Service cases. Applications should be made to the Joint Honorary Secretaries at the Hospital.

ROYAL SHEFFIELD INFIRMARY AND HOSPITAL. Royal Hospital Unit.—Applications are invited from registered medical practitioners, male and female, for the following appointments at the Royal Hospital, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts appointment will be for a period of six months, otherwise it may be extended. Salary is at the rate of £80 per annum, with full residential emoluments. A bonus of £20 will be payable after six months' satisfactory service, and a further bonus of £10 after a second six months' satisfactory service: OPHTHALMIC HOUSE SURGEON (A). This post is recognized for the D.O.M.S. ASSISTANT CASUALTY OFFICER, with Orthopaedic Duties (A). EAR, NOSE AND THROAT HOUSE SURGEON (A).

Applications are also invited from registered medical practitioners for the appointment of RESIDENT CASUALTY OFFICER (B1) at the Royal Hospital. Suitably qualified R and W practitioners holding B2 appointments are invited to apply Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £150 per annum.

Applications for each post to be forwarded to the undersigned immediately.—Percy N. Glass, General Superintendent.

ROYAL HOSPITAL, Wolverhampton (Incorporated under Royal Charter).—The Board of Management invite applications for the post of HONORARY ASSISTANT GYNAECOLOGIST AND OBSTETRICIAN. Candidates must be Fellows of the Royal College of Surgeons of England (or Edinburgh) and preferably Members of the Royal College of Obstetricians and Gynaecologists, and will be required to confine their private work to consulting obstetrical and gynaecological practice only. The appointment will be for the period of the war, in accordance with the B.M.A. recommendation. Applications should be sent not later than September 3 to the undersigned from whom further particulars may be obtained.—W. Cockburn House Governor.

ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY, Wigan.—Applications are invited from registered medical practitioners for the appointment of a HOUSE SURGEON (A), now vacant. Salary £150 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months; otherwise it may be extended for a further period. Appications should be sent to the undersigned as soon as possible.—A. Stanley Brunt, General Supt. and Secretary.

ROYAL LANCASTER INFIRMARY. Lancaster (311 beds.) Hospital recognized by the Royal College of Surgeons (England) for two Senior Posts. —Applications are invited from registered medical practitioners, male and female, for the post of SECOND HOUSE SURGEON (B2), Orthopaedic and Casualty, vacant immediately. Salary £210 per annum, with full residential emoluments. R and W practitioners holding A posts may apply, when the appointment will be limited to six months, otherwise it may be extended. SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL

LONDON SATURDAY AUGUST 25 1945

HEARD AT HEADQUARTERS

The New Council

The new members of Council of the B.M.A. are not as numerous as usual, but they include several who have made their voices heard to good effect at Representative Meetings and have done much work for the Association in other ways—Dr. W. E. Dornan of Sheffield, Dr. Talbot Rogers of Bromley, Dr. Smith Pool of Glasgow, and Dr. W. V. Howells of Swansea. A newcomer elected by the Public Health Service representatives, in place of Provost Picken, is Dr. R. H. H. Jolly, medical officer of health for Wolverhampton. At the first formal meeting of the new Council eleven special committees were reappointed, and one new committee was formed (to consider the question of medical services under the new Education Act). Three special committees—the one which has drawn up the "Charter for Health," and those which considered the question of "equal pay" and the Goodenough report—having completed their references, were discharged.

Long Service Record

The Council at its last meeting placed on record its great appreciation of the services of Dr. J. C. Matthews, of Downton, Wiltshire, who is no longer one of its members. Dr. Matthews has done very great work for the Association, especially on its organization side. For twelve years he has been chairman of the Organization Committee, and there is nothing about Divisions and Branches and the tribulations of local honorary secretaries that he does not know. He began his work in the far-off days as honorary secretary of the Lancashire and Cheshire Branch, an office which he held for seven years, and he was also chairman of the Liverpool Division. For twenty years he was a member of the Central Council, and many committees at headquarters have had the benefit of his knowledge and experience.

Association Scholarships

Under the increasing body of its medico-political work the scientific work of the Association is always in danger of being overshadowed. Therefore it is worth noting again that the Association scholarships are to be increased. Normally the Association provides two scholarships, each of an annual value of £200, and three, each of an annual value of £150. One additional £150 scholarship is now to be awarded, making six scholarships in all. They are to be awarded for the nine-months period from January 1 next, subject to renewal for a further one or two years at the discretion of the Council. No Association science grants are to be made in the ensuing year, owing to the difficulty of allocating them, but the money so saved is devoted to the additional scholarship. The general purpose of both scholarships and grants is to encourage research into the causation, prevention, and treatment of disease. Special measures are being taken to bring them to the knowledge of medical officers serving in the Forces.

Requisitioning of Doctors' Houses

The requisitioning of doctors' houses is a matter on which headquarters continues to receive letters. This is not a local matter; the protests come from several different parts of the country. Doctors' houses in many cases have been taken over, especially by the Ministry of Health for such purposes as wartime nurseries, and while requisitioning, apparently, is the easiest of processes, "derequisitioning" is not. The result is seriously to hamper the efforts of the profession to provide an adequate medical service for the public. The requisitioning is still going on. One member at the A.R.M. mentioned a case known to him in which a doctor returning from service was told that he was just in time; had he been three weeks later his house would have been requisitioned. Many others are not so lucky. The elementary fact seems to be overlooked by many of those in authority that a doctor's house is not, like most people's houses, merely a place to live in, but is the headquarters of a busy professional practice, and that in very many cases the doctor has cramped his own domestic accommodation in order to provide a waiting-room and other facilities for his patients. The A.R.M. passed a resolution on this subject in very definite terms, and the matter is being urgently pressed upon the Ministry of Health.

The *New Statesman and Nation* is one of the best informed of the weeklies, and it should know better than to allow a correspondent in its columns to describe the *Medical World* as the "paper" of the B.M.A., and to quote some remarks from that journal as a peg for criticism of the Association.

Two new scales of benefit have been made available to members of the Yorkshire Provident Society during the last year, one of them (Scale B) extending the original Scale A to include specialists' fees and treatment other than as in-patient of hospital or nursing home; the other combining the two existing scales with 50% higher benefits. The contributions for these benefits are not greatly increased; nevertheless membership of the society has not gone up as much as the general committee of the society had hoped—a state of affairs attributed to uncertainty regarding the future of the health services. There are now 540 members and 627 dependants, a total of 1,167 potential beneficiaries. Contributions received amounted to £2,214, claims to £1,103, leaving a surplus less expenses of £944, to be added to the funds of the Central Provident Association at Oxford, which guarantees the benefits.

Correspondence

Medical Demobilization

SIR,—The gist of what I have to say has appeared previously on several occasions in letters from other Service medical officers, but it would appear that the only hope of any action being taken is constant reiteration until it is realized that there is a growing discontent among members of the profession in the Services at the lack of information about medical demobilization.

There is no forecast as to when age-and-service groups over 16 are to be demobilized, and this information, even though only a forecast, is of great importance in making arrangements for practices and return to civil life. Surely there has been sufficient time for a plan to be worked out for the medical services and notified to all concerned.

It has been stated that in order to facilitate medical demobilization there is to be a transfer of suitable E.M.S. personnel to the Services, and that general practitioners up to the age of 35 are to be conscripted. There would appear to be no reason why this age should not be raised to 40, and thus allow a bigger interchange between Service and civilian doctors. It is granted that civilian doctors have had their fill of hard work during the war years, but now seems the time to give them a rest in the Services.

If they are below Category A, there are many jobs in the B.L.A., in L. of C. or general hospitals, which would be well within their physical capabilities. There are few medical officers who would decline the chance of coming home to take over this hard work.

There are many doctors who have now served up to six years, during which time their medical work has been negligible, with a resulting deterioration in their medical knowledge. Some of these doctors still have no prospects of return to civil practice. I quote my own case as an example.

It is now stated by the War Office that medical officers of age-and-service groups 16 and over with less than 2½ years' operational service over-seas are eligible for service in the Far East. My age-and-service group is 20. I have served in the Army since Sept. 3, 1939, and have spent almost three years in oversea operational service with an Infantry Division in the B.E.F., M.E.F., B.N.A.F., C.M.F., and B.L.A. Because my oversea service was split by an interval of six months and one week in the U.K. training for the landings in Normandy, it ceases to count against eligibility for further service in the Far East. Accordingly I now find myself under orders to proceed to S.E.A.C., even although I do not come under the heading of specialist. I can scarcely imagine that my tour of duty will be less than two years, and this will mean a total of eight years away from my practice. I consider that this is an injustice, but I am by no means the only one to find himself in such a position. Any attempts to obtain satisfaction on the matter result merely in being passed from one department to another, and no definite answer being produced.

In spite of what has been said in official replies in Parliament and elsewhere, there are still surplus medical officers in some branches of the Services, and this will be borne out by the large majority of medical officers. It is felt that medical demobilization could keep pace with, or at least approach, the general demobilization of the Army, and that there would be no necessity to send doctors in age-and-service groups under 27 to the Far East, if the recruitment of civilian practitioners up to the age of 40 and E.M.S. medical officers was really pressed, and if there was a combing-out of medical personnel from jobs where they are not required. Unfortunately it would appear that these plans are still not far past the discussion stage, and are being approached in a very half-hearted manner.—I am, etc.,

"R.A.M.C. OFFICER."

SIR,—I would be grateful for an opportunity to add yet one more voice to the correspondence on medical demobilization. I speak particularly as an officer in the intermediate groups, say, 20–30, who may have the best part of two years' service to look forward to.

We are, many of us, very deeply concerned over the uncertainty of our future; the absence of any definite statement from the Government or the Service Departments as to possible release dates, with the exception of the first few groups, is particularly disquieting. There are Service needs that still have to be met; but we, who have some years' experience of Service life, well know that "general duty" medical officers *do* waste a very large proportion of their time either in wasteful boring inactivity or in duties of a non-professional nature. Many of us have little or nothing of our original practices left to go back to; many of us have had no opportunity to make a start in practice before this war "caught us up." We shall have to make up for lack of clinical experience and loss of connexions. We shall have to compete in the "open market" with men fresh from the medical schools anything up to ten years younger than ourselves. Many of us have commitments and liabilities which place a heavy and increasing strain on a Service income, which, while adequate for a young man with no liabilities, is far from generous for the man who has, for example, £60 per annum to pay out in life assurance premiums.

The Service Departments may show a tendency to hang on to officers who have a few years' experience of Service customs and routine; in the same way the E.M.S. may tend to hang on to people they know (there are even cases of men being "up-graded" in order that their services can be retained). This tendency, if manifested by either the Service Departments, or the E.M.S., or the Local Medical War Committees, should be firmly opposed.

Most of us will need considerable teaching in midwifery, gynaecology, and child health. These are probably the most important branches of medical knowledge for the general practitioner, yet these are just the branches of knowledge in which the experience of the last few years has left us deficient. Every returning Service medical officer should be provided with adequate re-education in these subjects, both practical and theoretical; a two-weeks "refresher" will not solve this problem. Finally, the medical students in the Forces. There are many of these: young men still of student age; they are men with a broadened experience of life and would make excellent doctors. Surely if arts and theological students are to be released from the Forces then something should be done for the medical students.

There is our position; surely it is thought-provoking enough. We know that the country is desperately undermanned with general practitioners, yet we have the prospect of one or two more years of—doing nothing mostly.—I am, etc.,

F. P. S. MALONE-BARRETT,
Surg. Lieut., R.N.V.R.

SIR,—The recent correspondence on the subject of demobilization seems to reflect too much the viewpoint of the individual; it seems to me that second only to the needs of the Forces comes the need of the child for his father, and that of the older boy in particular. There is every sympathy with the young doctor who, shortly after qualification, was called up (or volunteered) and now sees many others—of whom some are certainly of military age and physically fit—remaining behind with the overwhelming advantage of pursuing (whether in general practice, hospital, or clinic) their profession: the attaining of additional qualifications must be especially galling to him; but is not sympathy due far more to the rising generation?

And if this be so, is it not better that demobilization should take into account the need in the "home" before that of the individual, however hard the latter may be? There is no getting away from the fact that much of the root cause of the increase in juvenile delinquency and of the excess of work in the child guidance clinics (to say nothing of the many troubled children who do not attend these) is due to the tragedy of the absent father. Surely there must be some of us who are of military age and unmarried, or without a family, who have not yet served with the Forces?—I am, etc.,

St. Albans. MAURICE YOUNG.

Release of Medical Officers

SIR,—The information supplied by the Director-General of Medical Services of the R.A.F. to the Central Medical War Committee on the question of the release of medical officers and published in the *Journal* of Aug. 4 (p. 162) is unsatisfactory inasmuch as it is indefinite in the case of Groups 1–8. If Groups 9 and 10 are to be released "during September" it should be stated that Groups 1–8 are to be released "by the end of August." "By September" is a vague statement and allows for manipulation.

I am in Group 8, and so far there is no indication that any release is forthcoming. I am a station medical officer, and until a relief is supplied for me by the medical authorities at the Air Ministry no start on release action in my case can be made. As it takes about 10 to 14 days after notification before the actual release comes about, unless a substitute is provided within the next few days my release will be taking place "during September." Time is a valuable commodity to the volunteer reservist.

Will the Central Medical War Committee please obtain a definite statement that Groups 1–8 are to be released "by the end of August" and make certain that this applies to all of us in those groups.—I am, etc.,

"VOLUNTEER RESERVIST."

⁂ The Secretary of the Central Medical War Committee writes: The C.M.W.C. is informed that the release of R.A.F. medical officers below the rank of Group Captain in Groups 7 and 8 was originally planned for the period Aug. 1 to Sept. 30, but that an amending signal was issued to all Commands on Aug. 10, stating that these groups were to be brought forward for release during August.

Released Doctors and Official Appointments

SIR,—"Appointments. His Majesty's Colonial Service. . . . The maintenance of an efficient Colonial Medical Service constitutes a vital part of the national war effort, and it is most important . . . adequate supply of doctors . . . invites applications from doctors . . . *who are under 35 years of age*. . . ." The quotation is from the *Journal* of Aug. 4 (p. 10 of advertisements), but the italics are mine. Week by week similar advertisements appear: also personal application to other official bodies elicits the gratuitous information that there is an age limit for appointments.

This age limit is as unfair as it is an insult to the returned and returning Service doctors who are above the arbitrarily fixed limit. All of them have been playing "a vital part" in "the national war effort," some for as long as six years. Not a few are over 50, and a considerable proportion are over 35; very many have served under more exacting and difficult conditions—and for long periods—than those that would be demanded of them by service under the Colonial Office, the Ministry of Health, the L.C.C., and the like.

Any medical man deemed fit enough to serve his King and country in the Navy, the Army, or the Air Force should be deemed fit enough to serve any official body at any age. In my opinion it is the bounden duty of the B.M.A., as the representative body for all the doctors in the United Kingdom, to insist that no doctor shall be debarred from any public appointment (or, indeed, from any appointment whatsoever) by reason of his age alone.—I am, etc.,

"OLD SOLDIER."

Release of Doctors

SIR,—I have followed the correspondence on this subject with keen interest, and venture to put forward my own views—i.e., those of a woman doctor employed with the A.T.S.

1. The reason for the so-called shortage of medical officers—at least in the R.A.M.C.—is that they are not fully employed. My own post well illustrates this fact. The morning's work—including health inspections (a great and time-consuming feature of work with the A.T.S.), sick parade, round in the C.R.S., and replies to letters—is invariably finished at 11 a.m. There is then a gap until 2 p.m., when a sanitary round is carried out on requisitioned houses. This in my opinion is a complete waste of a doctor's time. The point is well illustrated by a recent experience. I recom-

mended condemnation of some A.T.S. sleeping accommodation; the final inspection and recommendation were made by a warrant officer in the hygiene section not even a doctor. So much for the day's work of a qualified doctor. I might add that in my two years' service in the R.A.M.C. I have only had a post requiring a full day's work on one occasion, and that only lasted for three months. Since there appears to be no remedy for this state of affairs—and I have been assured by a reasonably sensible doctor of higher rank than myself that there is none—may I make my second point?

2. I have many times thought that an underworked M.O. could be of great value to some hardworked G.P. in the district—at least in taking an evening surgery and doing some visits. Why cannot this be arranged? I do not think any serving medical officer would be liable to neglect his or her Service commitments on account of participation in some civilian medical work, and I can foresee benefit to both the community and the M.O. If this is not feasible why not demobilize a large number of medical officers and let them act as C.M.P.s to the Forces? Who could be better qualified to do such work?

3. Finally, I think something of this kind would assist in alleviating that terrible sense of frustration from which many of us in the Forces are suffering. The ambitious may apply to become "trainees" in some specialty, volunteer to go abroad—anything to feel that their professional lives are not being wasted; but I have found from personal experience that it is of no avail.—I am, etc.,

"A.T.S. M.O."

Release of Students

SIR,—Arts and Divinity students, we hear, are to be released from the Services to return to the universities in time for the October term, after three years' service, whether this be at home or abroad. What about medical students and others who have served for four, five, and, by Sept. 3, six years? Many of these—i.e., still surviving—have three, four, or more years' active service abroad to their credit, perhaps with a debit on the health and fitness state. The War Office ruling is that no exceptions may be made, although some are due for release early in 1946.

Since universities cannot very well alter their curricula to suit all the vagaries of the age-and-service group releases, is it asking too much to suggest that a modicum of common sense be applied to the bureaucratic machine, and that these men should be released in order to restart their careers where and when they left off. Even if this be restricted to those with six years' service it is asking very little, although, with the cry of shortage of doctors, it would appear reasonable to release those with five, four, or three years' service, especially if that has largely been in an operational theatre. Most of these men will be 30 years of age before they are qualified and able to earn a living—an age when the average man should be supporting a family.

I hesitate to raise another point, but it is true nevertheless. The long time necessary to qualify in medicine has been used to evade service by some who otherwise would not have taken up medicine as a career. Surely we can ill afford to impede those who had taken it up as a calling but felt the call of service to their country stronger still. Unselfish devotion appears to be at a discount these days. There are men who have started medicine since the war, have qualified, and are still not in the Services. How this may be I know not; perhaps once more a case of the slow emptying of the duodenal cap.

Generosity is extended by the home country to our allies—namely, Egypt, whose students, with no service, are given a welcome. I do not know how the Dominions treat their students, but even our late enemy is faring better, since arrangements were well in hand some time ago for German medical students to be released by us from the military Forces in order to resume their studies.

It is a poor tribute to the medical students of 1939 and 1940 who joined up and have paid the supreme sacrifice, that their one-time colleagues should now be disheartened and therefore hesitant as to whether they can or dare contemplate a return, at their present ages, to take up once more the career of their choice.—I am, etc.,

London, S.W.2. JAMES MELVIN.

Release and Recruitment

SIR,—As a Service M.O. recently returned from oversea service I view with dismay the number of doctors still employed in civil practice who have only been qualified for a few years. I know several of these people personally, and some of them have already been medically examined and placed in Category A. The longer these people in B1 jobs hold them, then the more certain are they of getting specialist appointments if and when they are eventually called to the Services. This is in contrast to the practitioner who is called up within a year or so of qualifying. He, of course, usually goes to a field ambulance or other field unit as M.O., and may do all his service in the field. He, then, is the person who will require rehabilitation before venturing into civilian practice again.

One last point is that several medical officers not physically fit are retained in the Services in low medical categories. Surely these individuals should be discharged and fit men brought in. These men discharged from the Services could replace those called up.

I hope this letter will not be interpreted by some as the writing of a jealous and disgruntled M.O. But let the young civilian practitioner please remember that the longer he remains out of the Services the longer will a Service M.O. have to remain in. The B.M.A. circular on release of May, 1945, states: "In short, the key to the problem of releasing Service doctors lies in the recruitment of civilian doctors."—I am, etc.,

"R.M.O., EX-S.E.A.C."

Civilian Practice

SIR,—Dr. Guy Neely (*Supplement*, July 28, p. 20) says: "Nonsense is still being written about overworked doctors. The amount of work a doctor can do . . . depends on the help he can find for his patient." Without this home help, he says, he cannot look after anyone who must stay in bed, and implies that all such patients are sent into hospital, so that the "work of the G.P. is restricted and the hospitals overfilled." He goes so far as to say that a demobilized man would only have certificates to fill up, consultations, and "a single visit."

I find this rather cryptic. Anyhow, Dr. Neely must be extraordinarily lucky in his hospitals. Here, as in most places I have heard of, hospitals are understaffed, overworked, and can take in fewer patients, not more. My experience is that, desperate as the domestic help-and-nursing situation is, vast numbers of patients have to be ill in bed at home who ought to be in hospital under observation, through no fault of the hospitals or doctors. And who is to visit these patients in their homes if the doctor does not?—I am, etc.,

Stowmarket. H. S. GASKELL.

Discontinuance of Compulsory Recruitment of Medical Women

SIR,—The Medical Women's Federation wrote to the Minister of Labour and National Service on June 21 calling attention to the decision to discontinue the compulsory recruitment of medical women, and asking that the matter should be reconsidered. The Minister has now replied stating that he does not think there is sufficient justification for applying compulsion to women doctors at a time when the recruitment of women for the Forces is otherwise on a purely voluntary basis. The Federation greatly deplores this decision, especially in view of the probable delay in the demobilization of some medical men and women.—I am, etc.,

JANET M. CAMPBELL,
President,
Bromley, Kent. Medical Women's Federation

General Medical Council

SIR,—There must be many members who read with surprise the report (*Supplement*, July 28, p. 16) of the special session of the above body. One is accustomed to read of cases brought before this tribunal involving adultery where there has been previous professional relationship, drunkenness in charge of cars, and instances of fraud. Such are well understood by the majority to require investigation as to the propriety of the person concerned to continue to hold the right to practise. But in the present series of cases it would seem that the G.M.C. is adjudicating in a different field altogether.

In the first case, that of a practitioner who failed in his obligations as an N.H.I. practitioner in that he did not give the necessary attention to patients when called upon to do so, it is obvious from the report that the case has already been dealt with through the usual channels—namely, Insurance Committee and, finally, the Minister of Health, the latter no doubt inflicting a monetary penalty or further causing the removal of the practitioner's name from the N.H.I. list. Is not that enough? Is the offender to be subjected to the risk of having his source of livelihood taken from him?

In the third case, that of the unlawful use of petrol, the offender again was very severely dealt with by the bench, but again this is not enough; he also is to run the risk of his earning capacity being removed from him. Surely this could hardly be construed as "infamous conduct in a professional respect."

Whilst holding no brief for either offender, one cannot escape the view that the inquisitorial powers of the G.M.C. are being taken far beyond the scope intended by those responsible for the creation of this altogether autocratic body.—I am, etc.,

Dudley, Worcs. A. W. WESTON.

Majority Decision by Plebiscite

SIR,—Dr. S. F. Logan Dahne (*Supplement*, July 28, p. 17) has championed the cause of the freedom, liberty, and honour of the individual. Presumably, therefore, he expects those members of the medical profession who believe in State medical service to accept it when the time comes and the others to refuse it, and so accentuate the division and strife in our ranks. But the liberty of the individual often has to be subordinated to the good of the community, and changes of organization and administration have to be made to meet changing conditions of life. It is surely essential that these changes should be made in an orderly and democratic way, and this is not assisted by invoking passions and emotions and raising bogies about threats to the eternal verities.

I would therefore like to support Dr. Guy Bousfield's suggestion (p. 18) that when the Government's final plan is produced the members of the profession should be allowed to vote for or against acceptance of it, and should promise to abide by the decision of the majority. May I ask if it is the intention of the B.M.A. to carry out this plebiscite when the time comes?—I am, etc.,

Reading. ERIC BEALE.

Sight-testing Opticians

SIR,—Mr. David Rankine (*Supplement*, July 7, p. 3) must be singularly unfortunate and circumscribed in his experience of consulting opticians; otherwise he would be aware that they have no medical aspirations whatsoever. On the contrary, they merely desire to be allowed to continue to develop their work of dealing with the defects of non-pathological eyes—work which has been their specialization for several decades more than it has been performed as a minor function by Mr. Rankine's profession.

Mr. Rankine must surely know, too, that members of my profession statutorily carry out the vast majority of eye examinations under the National Health Insurance Acts. He may have heard, also, of the high praise publicly bestowed by the medical officers of the great ordnance factories—members of his own profession—upon the work done by consulting opticians in those factories. Nor can he really be ignorant of the fact that consulting opticians throughout the country are daily working in close, amicable, and responsible collaboration with general medical practitioners and with ophthalmic surgeons.

One of my close friends is an ophthalmic surgeon, and I am in regular and friendly contact with two or three more. I personally, therefore, cannot be misled into regarding the peculiar and rancorous doctrine of Mr. Rankine as the policy of his profession as a whole; which policy I know to be the more commendable one of co-operation for the public good.—I am, etc.,

Welwyn Garden City. JOHN COLE.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Dr. R. F. T. Grace, M.R.C.P., at 50, Wimpole Street, London, W.1; Dr. Gerald Slot, M.R.C.P., at 2, Harley Street, London, W.1.

BRITISH MEDICAL ASSOCIATION

Meetings of Branches and Divisions

MONMOUTHSHIRE DIVISION

The report of its Executive Committee was presented to the Monmouthshire Division at its annual meeting at Newport on June 16, when Mr. W. J. Roche presided. Two political meetings were held during the year, to which the Monmouthshire members of Parliament were invited, and Sir Charles Edwards, Sir Reginald Clarry, and Mr. Arthur Jenkins attended. At the second meeting Dr. L. S. Potter, Assistant Secretary of the B.M.A., gave an address on B.M.A. policy, and later answered many questions. In addition there were six clinical meetings, when the speakers and their subjects were as follows: Dr. Graham Jones, peptic ulcer; Dr. Arthur Watkins, diseases of infancy; Dr. D. A. Williams, asthma; Mr. Emlyn Lewis, plastic surgery; Dr. Stanley White, sex hormones; and Dr. R. Drummond, haemolytic diseases of the newborn. The last meeting took the form of a "brains trust." The average attendance was 40. The Division arranged a very successful dance at the Westgate Hotel, and as a result £50 was sent to a medical charity.

The meeting elected the following officers for the coming year: chairman, Dr. G. R. Strong; vice-chairman, Dr. W. F. Mulvey; secretaries, Mr. J. T. Rice Edwards and Dr. A. G. Buick; Representatives, Dr. R. J. S. Verity and Mr. Roche. The concluding business was a discussion of the Annual Report of Council.

Branch and Division Meetings to be Held

WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—At Clayton Hospital, Sunday, Sept. 2, 11 a.m., Postgraduate Lecture by Dr. Leslie Watson: Autonomic Imbalance.

H.M. Forces Appointments

ARMY

Col. (Temp. Major-Gen.) E. A. Sutton, C.B.E., M.C., late R.A.M.C., to be Major-Gen.

Col. H. G. Winter, M.C., late R.A.M.C., having completed four years in the rank, is retained on the Active List, supernumerary.

Col. F. D. Annesley, M.C., late R.A.M.C., having attained the age for retirement, is retained on the Active List, supernumerary.

Lieut.-Cols. W. D. Anderton, M.C., E. M. Townsend, M.C., and D. W. Beamish, M.C., from R.A.M.C., to be Cols.

ROYAL ARMY MEDICAL CORPS

Lieut.-Col. D. Cran, having attained the age for retirement, is retained on the Active List, supernumerary.

Majors W. H. Carter, W. R. C. Spicer, R. T. P. Tweedy, and A. Sachs to be Lieut.-Cols.

The following officers, holding short service commissions, have been appointed to permanent commissions: Capts. J. N. Threlfall, J. Duguid, A. D. Young, D.S.O., T. E. Field, D. R. H. Montgomery, M.C., I. Macphail, N. D. Lance, P. B. Longden, D. H. D. Burbridge, G. R. Marshall, D.S.O., A. M. Buchanan, G. S. Caithness, E. J. Bowmer, M.C., H. O. P. McSheehy, M.C.

TERRITORIAL ARMY

Col. (Temp. Major-Gen.) P. H. Mitchiner, C.B., C.B.E., T.D., K.H.S., late R.A.M.C., to be Major-Gen. (Substituted for the notification in a *Supplement* to the *London Gazette* dated July 31.)

TERRITORIAL ARMY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Capt. D. E. Denny-Brown, O.B.E., to be a Consultant, and has been granted the local rank of Brig.

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

War Subs. Capts. J. J. Murphy, J. McMaster, S. Livingstone, and R. S. Wathes have relinquished their commissions on account of disability, and have been granted the honorary rank of Capt.

War Subs. Capt. J. A. Dowds has resigned his commission.

Lieut. T. N. V. Potts has relinquished his commission on account of disability, and has been granted the honorary rank of Lieut.

To be Lieuts.: T. Standring, J. M. Anderson, C. A. Baggley, T. E. Bairstow, M. D. Caplan, I. F. Collie, C. V. Donnelly, V. B. J. Edwards, A. M. Epstein, A. D. Evans, R. L. M. Ferrari, R. M. Hardisty, E. W. Heining, F. A. Holden, D. B. Kennedy, H. O. Jones, F. W. Lapage, L. N. Lightstone, J. L. F. Maine, V. C. S. Majmudar, R. H. Merrick, R. Macl. Millen, C. M. Monro, W. H. Oesterlein, T. D. S. Oswald, A. K. Pardhy, J. R. Prentice, N. E. Rankin, J. T. Scales, J. R. T. Selby, H. J. Shuttleworth, R. Spencer, J. T. Sweetnam, J. L. Taylor, M. N. Tempest, R. Thomas, C. H. Todd, and J. D. A. Whitelaw.

WOMEN'S FORCES

EMPLOYED WITH THE R.A.M.C.

War Subs. Capt. M. W. Bowen has relinquished her commission. (Substituted for the notification in a *Supplement* to the *London Gazette* dated June 29.)

The following M.O.s have been granted commissions in the rank of Lieut.: Phyllis M. Neil, Audrey F. Roberts, Catherine G. Simpson, and Sybil M. Williams.

ROYAL AIR FORCE

ROYAL AIR FORCE VOLUNTEER RESERVE

Wing. Cmdr. (Temp.) R. N. Ironside has been granted the rank of War Subs. Wing Cmdr.

To be Flying Officers (Emergency): N. A. G. Covell and H. Harris.

INDIAN MEDICAL SERVICE

Col. W. C. Spackman has retired.

ARMY IN BURMA RESERVE OF OFFICERS

Capts. M. N. Ameen and D. R. Lewis to be Majors.

EMERGENCY COMMISSIONS

To be Lieuts.: P. M. C. Peacock, H. Sharma, D. M. Misra, and S. C Paul.

COLONIAL MEDICAL SERVICE

The following appointments are announced: L. A. Duncan, M.R.C.S., L.R.C.P., Medical Officer, St. Helena; J. R. Reid, M.B., Ch.B., Medical Officer, Fiji; J. K. Tate, M.B., Ch.B., Assistant Medical Officer, Jamaica; S. E. Croskery, M.D., Medical Officer, Aden; J. S. Brown, M.D., D.M.R.E., Specialist in Radiology, Uganda; E. Cochrane, M.B., Ch.B., D.P.H., Director of Medical Services, Aden; D. K. Cowan, L.R.C.P., L.R.C.S., Medical Officer, Nigeria; H. S. Evans, M.R.C.S., L.R.C.P., Assistant Director of Medical Services, Fiji; S. Forrest, M.B., Ch.B., Deputy Director of Medical Services, Tanganyika; G. Holmes, M.B., B.S., Specialist in Midwifery and Gynaecology, Uganda; A. McKenzie, M.B., B.S., Senior Medical Officer, Tanganyika; G. Maclean, M.B., Ch.B., Director of Medical Services, Trinidad; K. A. T. Martin, M.D., D.P.H., Assistant Director of Medical Services, Kenya; P. B. Robinson, M.B., B.Ch., D.P.H., Deputy Director of Medical Services, Uganda; F. J. Sladen, M.R.C.S., L.R.C.P., Senior Medical Officer, Falkland Islands; P. A. T. Sneath, M.D., D.P.H., Director of Medical Services, Tanganyika; K. R. Steenson, M.B., Ch.B., Medical Officer, Grade I, Fiji; J. Williamson, M.B., Ch.B., Senior Medical Officer, Tanganyika; W. A. Young, B.M., B.Ch., Senior Specialist in Venereal Diseases, Tanganyika.

POSTGRADUATE NEWS

The Fellowship of Medicine announces the following courses: (1) Revision course in anaesthetics at Royal Cancer Hospital, Oct. 8 to 20, with lectures and/or demonstrations daily. (2) Course in children's diseases, at the Princess Louise Hospital, Kensington, all day Sat. and Sun., Sept. 29 and 30. (3) Course in rheumatism, at Rheumatic Unit, St. Stephen's Hospital, Fulham Road, all day Sat. and Sun., Oct. 20 and 21.

WEEKLY POSTGRADUATE DIARY

EDINBURGH POSTGRADUATE LECTURES.—At Edinburgh Royal Infirmary, *Thurs.*, 4.30 p.m., Prof. D. M. Lyon: The Basis of Prognosis.

DIARY OF SOCIETIES AND LECTURES

FELLOWSHIP OF MEDICINE, 1, Wimpole Street, W.—*Royal Cancer Hospital*, S.W., Mon., Wed., and Fri., 6 to 8.15 p.m., Primary F.R.C.S. Course. *West End Hospital for Nervous Diseases*, Welbeck Street, W., Mon., Tues., and Fri., 2 30 p.m., M.R.C.P. Course in Neurology.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. for 18 words or less. Extra words 3s. 6d. for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.

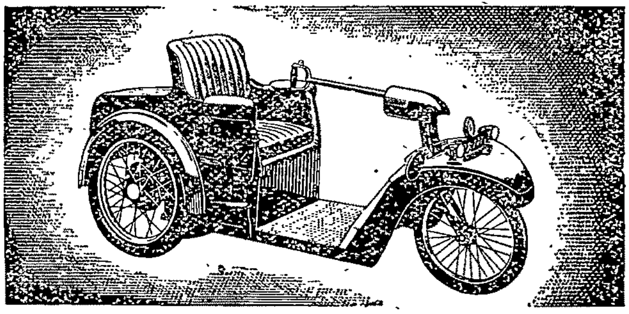
BIRTH

CROSS.—On Aug. 15, 1945, at Braunton Nursing Home, Devon, to Mary, wife of Fl. Lieut. W. George Cross, R.A.F.V.R., a daughter.

MARRIAGE

SWYER—NASH.—On July 24, 1945, in London, Gerald Isaac Macdonald Swyer, M.A., D.Phil., B.M., M.R.C.P., to Lynda Irene Nash, M.S.R.

For the Disabled
and the Infirm



THE ability to get about, to maintain daily interests and social contacts, plays an important part in the continued health and happiness of the disabled and the infirm.
For this purpose the NELCO "SOLOCAR" is ideal. Electrically driven; silent, vibrationless and free from fumes; operated with one hand—effortlessly and without strain—it climbs any hill, travels forty miles without re-charging, passes through most doorways, turns in its own length.

Enquiries for the new post-war models can now be received.
A fully detailed and illustrated brochure will shortly be issued.

The Nelco **SOLOCAR**

NELCO LTD., Station Road, Shalford, Nr. Guildford Surrey.

FRANKLIN'S

ENGLISH MADE

SURGEONS GLOVES

Franklin's Surgeons' Gloves are noted for their exceptional Ageing Powers and Tensile Strength.

Constant sterilisation is in no way detrimental to the glove.

Its super-elasticity allows the glove to be put on or taken off quickly and efficiently without possibility of splitting.

Obtainable from any Surgical House.

GREATEST PROPERTY PROTECTION SCHEME EVER EVOLVED . . .

To-day, Property, Equipment and Stock are more valuable than ever. If lost, they cannot be replaced for a long time, during which period revenue is also lost, goodwill may go and capital appreciation and interest vanish. The Pyrene Company have, therefore, evolved a Hire Maintenance Plan which gives such assets the most thorough protection from the ravages of fire. The plan includes not only the provision of the best and most suitable Fire Extinguishers but twice a year inspection by experts, supply of spare parts, repairing, repainting and, when necessary, replacing; your staff may be trained in the proper use of fire appliances and Certificates are issued after inspection . . . all for an inclusive annual fee. In your own interest you should investigate this plan now!

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.

B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.

A—Whole-time resident house appointments open to practitioners without previous experience.

B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with the Indian Medical Service for the duration of the war Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a minimum period of 6½ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office, to whom all inquiries should be addressed.

AUCKLAND HOSPITAL BOARD, New Zealand.—Applications addressed to the undersigned and closing at noon on Monday, September 17, 1945, are invited from registered medical practitioners for two appointments as SENIOR RADIOLOGISTS at the Board's Institutions, at commencing salaries of £1,000 per annum, rising by two annual increments of £100 to £1,200 per annum, living out. (New Zealand currency.) Applicants must hold Diploma of Radiology. The appointments are whole-time and are for diagnostic radiology only. The Board's Institutions include: (1) The Auckland Hospital of 1,000 beds (with a Director of Radiology and an Assistant Radiologist already appointed). (2) The Green Lane Hospital of 600 beds, including a Chest Diseases Department. (3) The Middlemore Hospital of 300 beds, including an Orthopaedic Department. New *X*-ray Departments are being opened in the two latter hospitals this year. Conditions and memorandum of appointment may be obtained from the office of the High Commissioner for New Zealand, New Zealand House, the Strand, London, W.C.2. Applications should be endorsed "Senior Radiologist" and sent to New Zealand direct by air mail.—R. F. Galbraith, Secretary.

MUNICIPAL COUNCIL OF NAIROBI (Kenya Colony). ASSISTANT MEDICAL OFFICER OF HEALTH.—The Municipal Council of Nairobi in the Colony of Kenya invites applications from qualified and experienced persons for the post of Assistant Medical Officer of Health. Candidates must possess a diploma in Public Health. The salary attached to the post is £840 per annum, rising by annual increments of £40 to £920 per annum, but a candidate with special qualifications may be allowed to enter the scale at an appropriate point higher than the initial salary. After a probationary period of six months, the person appointed, if confirmed in the appointment, will be required to contribute 7½% of his salary to the Municipal Provident Fund, into which the Council will contribute a similar amount. The person appointed will be entitled to six months' oversea leave on full pay with passages paid after each period of four years' service. Eighteen days annual local leave is also granted. Applications, stating age, experience and qualifications and accompanied by a recent photograph, medical certificate, and certified copies (not originals) of testimonials, should be addressed to the undersigned.—W. W. Ridout, Town Clerk, Town Hall, Nairobi, Kenya Colony.

CITY OF PLYMOUTH EDUCATION COMMITTEE. TEMPORARY ASSISTANT SCHOOL MEDICAL OFFICER.—With the consent of the Ministry of Health, applications are invited from registered medical practitioners, male or female, for the above whole-time appointment. Medical officers at present employed on public health by a local authority are not eligible. The salary will be at the rate of £500 per annum, rising by annual increments of £25 to £700 per annum, plus war bonus. Previous experience in a similar capacity with a local authority will be taken into consideration in fixing the commencing salary within this scale. Applications should be forwarded as soon as possible to the Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.—Andrew Scotland, Director of Education, Education Offices, Cobourg Street, Plymouth.

CITY OF LEEDS. St. James's Hospital (1,296 beds).—LOCUM TENENS HOUSE PHYSICIAN required immediately for holiday duty (4 to 6 weeks). Fee £5 5s. per week, with full residence and board in addition. Apply Medical Officer of Health, Public Health Dept. (Hospitals Administration Section), 12, Market Buildings, Vicar Lane, Leeds, 1.

NEW ZEALAND.—The New Zealand Government invites applications from medical practitioners for VACANCIES in the Mental Hospitals Department in New Zealand. Salary £700 to £850 (New Zealand currency), in addition to free house, fuel, light, and laundry, with prospects of advancement. Free passage and half salary on voyage. Further particulars may be obtained from the High Commissioner for New Zealand, 415, Strand, London, W.C.2, with whom applications must be lodged by August 31.

CITY OF BIRMINGHAM. Yardley Green Road Sanatorium (335 beds). TEMPORARY ASSISTANT RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered male medical practitioners for the above appointment. In addition to his duties at the Sanatorium, the successful candidate will be required to undertake duties at the Anti-tuberculosis Centre. Candidates should have held a resident hospital appointment and an appointment in some institution recognized for the treatment of tuberculosis. Suitably qualified R practitioners now holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The commencing salary will be at the rate of £450 per annum, rising by £25 to £600 per annum, plus emoluments. Applications should be addressed to the Chief Clinical Tuberculosis Officer, 151, Great Charles Street, Birmingham, 3, not later than August 31, 1945.

COUNTY BOROUGH OF WEST HAM. Whipps Cross Hospital. TEMPORARY RESIDENT ASSISTANT MEDICAL OFFICER.—Applications are invited from registered medical practitioners, male and female, for the post of Temporary Resident Assistant Medical Officer (B1) at Whipps Cross Hospital, Leytonstone, E.11. Suitably qualified R and W practitioners holding B2 appointments may apply. R practitioners holding B1 appointments cannot apply unless they have been rejected by the R.A.M.C. Salary for the post is £350 per annum, rising by annual increments of £25 to a maximum of £450 p.a., plus a temporary war bonus, with apartments, board and laundry, valued for superannuation purposes at £100 per annum. The salary is inclusive, and all fees received from whatever source must be paid to the Council. Candidates must be fully qualified registered medical practitioners, and should have held a previous resident hospital appointment. Preference will be given to candidates with practical experience of surgical operations, and the person appointed must give his or her whole time to the service of the Council, and will be required, should the occasion arise, to act in any of the Council's other institutions. The appointment will be subject to the Council's regulations as made from time to time regarding holidays, sick pay, etc., and the successful candidate will be required to pass a medical examination. Forms upon which application must be made can be obtained from Dr. E. Ashworth Underwood, Medical Officer of Health, 223-225, Romford Road, West Ham, E.7, on receipt of a stamped addressed envelope, and returned to him not later than September 3, 1945. Canvassing members of the Council is prohibited and will disqualify.—Charles E. Cranfield, Town Clerk, Town Hall, West Ham, E.15.

COUNTY BOROUGH OF WEST HARTLEPOOL. Public Assistance Committee. Howbeck Infirmary and Emergency Medical Services Hospital (350 beds).—The Public Assistance Committee invite applications from registered male or female medical practitioners for the appointment of ASSISTANT MEDICAL OFFICER (resident) (B1). Salary will commence at £350 per annum, and will rise by annual increments of £25 to a maximum of £450 per annum, together with usual residential emoluments valued for superannuation purposes at £125 per annum. Suitably qualified R or W practitioners holding B2 appointments are invited to apply. Applications from R or W practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The successful candidate will be required to devote his or her whole time to the service of the Corporation and to carry out the instructions of the Medical Superintendent. Applications should be received by the Public Assistance Officer, Avenue Road, West Hartlepool, as soon as possible.— E. J. Waggott, Town Clerk, Town Clerk's Office, West Hartlepool.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE, Shotley Bridge Emergency Hospital (900 beds). HOUSE SURGEON (B2) to the Department of Thoracic Surgery.—Applications are invited from registered medical practitioners, male or female, for the above post, including R and W practitioners now holding A posts. The appointment is tenable for a period of six months and salary is at the rate of £250 per annum, plus cost-of-living bonus and full residential emoluments. Applications to be forwarded immediately to the Medical Officer of Health, Town Hall, Newcastle-upon-Tyne, 1.

COUNTY BOROUGH OF WALSALL, Manor Hospital (400 beds).—Applications are invited from registered medical practitioners, male and female, for the appointments of:

RESIDENT ANAESTHETIST (B2). The salary is at the rate of £350 per annum, rising by £25 to £425 per annum, with full residential emoluments. R practitioners who now hold A posts may apply, when appointment will be limited to six months, otherwise it will be for a period not exceeding four years.

JUNIOR ASSISTANT MEDICAL OFFICER (A). Salary is at the rate of £200 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise twelve months.

The officers appointed will act under the direction of the Medical Superintendent, and perform such other duties as may be required. Applications should be sent to the undersigned not later than August 31, 1945.—James A. M. Clark, Medical Officer of Health, Council House, Walsall.

COUNTY BOROUGH OF EAST HAM. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH AND MEDICAL OFFICER, Harts Sanatorium.—Applications are invited from men or women for the whole-time appointment stated above. The salary scale is £500 per annum, rising by annual increments of £25 to a maximum of £700, plus war bonus, at present £59 16s. per annum for men and £48 2s. for women, but the commencing salary will be fixed in accordance with qualifications and experience. The duties comprise the medical care of patients at Harts Tuberculosis Sanatorium and the Infectious Diseases Block Woodford Green, attendance at the Tuberculosis and Chest Clinic, and such other duties as may be assigned by the Medical Officer of Health, under whose direction the successful candidate will work Candidates must have experience in such work, but persons already in whole-time public health employment as defined by Paragraph 3 of Ministry of Health Circular 2818, 1943, will not be eligible for appointment.. Applications should be returned to my office forthwith.—C. V. Thornley, Town Clerk Town Hall, East Ham, E.6.

COUNTY BOROUGH OF ROTHERHAM. Municipal General Hospital. RESIDENT ASSISTANT MEDICAL OFFICER (A).—Applications are invited from fully registered medical practitioners with the necessary knowledge and experience of hospital work, including practitioners within three months of qualification and who are liable for service under the National Service Acts, for the above appointment. The appointment will be for a period of six months. Salary is at the rate of £200 per annum, together with full residential emoluments and a temporary cost-of-living bonus in accordance with the Council's scale. Forms of application may be obtained from the Medical Superintendent, Municipal General Hospital, Moorgate, Rotherham, and must be returned to the undersigned endorsed "Assistant Medical Officer" not later than Sept 12, 1945.—Charles Des Forges, Town Clerk, Municipal Offices, Rotherham.

COUNTY BOROUGH OF DERBY. Derby City Hospital. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the appointment of Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it may be extended to twelve months. The salary is at the rate of £200 per annum, with full residential emoluments, plus war bonus. The hospital is a 1A Casualty Hospital with a normal complement of 312 beds, plus casualty beds for acute medical and surgical cases, and with a large obstetrical department. Applications should be sent to the Medical Superintendent, City Hospital Derby, as early as possible.—C. Ashton, Town Clerk, Town Hall, Derby.

CITY OF PLYMOUTH, City General Hospital.—Applications are invited from duly qualified and registered medical practitioners, male and female including practitioners within three months of qualification and liable under the National Service Acts, for the appointment of CASUALTY OFFICER AND ASSISTANT RESIDENT (A) in the Maternity and Gynaecological Department at the City General Hospital. The appointment will be for a period of six months, but terminable by one month's notice on either side at any time. Salary is at the rate of £250 per annum, plus war bonus and full residential emoluments. All fees received by the officer must be refunded to the Council Further details may be obtained from the Medical Superintendent of the Hospital. Forms of application are not provided. Applications must be addressed to the undersigned as soon as possible.—T. Peirson, Medical Officer of Health, Seven Trees Lipson Road, Plymouth.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10

CITY OF PLYMOUTH. Mount Gold Orthopaedic and Tuberculosis Hospital (200 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ASSISTANT RESIDENT SURGICAL OFFICER (B2) at Mount Gold Hospital. Salary is at the rate of £250 per annum, plus war bonus, with full residential emoluments. All other fees received by the officer must be refunded to the Council. Married quarters are not provided. Preference will be given to applicants who have had some experience of orthopaedic and fracture work. The duties are mainly in the orthopaedic and E.M.S. sections of the Hospital, but may include some duties in the pulmonary tuberculosis wards. R and W practitioners who now hold A posts may apply, when the appointment will be limited to six months, otherwise it will be renewable for a further period of six months, terminable by one month's notice on either side at any time. Applications should be sent as soon as possible to T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF LEEDS. Public Health Department. St. Mary's Infirmary. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male, for the post of Resident Medical Officer (B2) for the above hospital, including R practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of twelve months. Preference will be given to candidates who have held an A post in a maternity hospital. The salary is at the rate of £250 per annum, plus a cost-of-living bonus, together with full residential emoluments. The hospital comprises a maternity unit of 98 beds and 102 beds for chronic sick. It is a Part 1 Training School under the regulations of the C.M.B., and the duties of the officer will include instruction of pupil midwives. All fees received by the officer must be paid into City funds. Applications, endorsed "R.M.O.," to be forwarded to the undersigned.—J. Johnstone Jervis, Medical Officer of Health, Public Health Department (Hospitals Administration Section), 12, Market Buildings, Leeds, 1.

CITY OF SHEFFIELD. King Edward VII Hospital for Crippled Children, Sheffield, 6. RESIDENT MEDICAL OFFICER (B1), female.—Applications are invited from registered medical practitioners for the appointment of Resident Medical Officer to the above Hospital (140 beds), which is for the treatment of surgical tuberculosis and other orthopaedic conditions. Suitably qualified W practitioners holding B2 appointments are invited to apply. Salary £350 p.a., rising by £25 to £550, with residential emoluments valued £150. Post vacant September 1, 1945, or as soon as possible after. Applications should be sent immediately to the Medical Superintendent.

CITY OF STOKE-ON-TRENT. CITY GENERAL HOSPITAL. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners (single, male or female), including R and W practitioners who now hold A posts, for the appointment of Assistant Resident Medical Officer (B2), at the City General Hospital, Stoke-on-Trent. If offered to an R or W practitioner the appointment will be limited to a period of six months, otherwise will be for a period of one year. The salary is at the rate of £250 per annum, plus bonus, with full residential emoluments. The Hospital, which is an Emergency Hospital, has approximately 1,200 beds, and there is excellent scope for medical, surgical, and obstetrical work.—Applications endorsed "Medical Officer, City General Hospital," to be sent to the undersigned immediately.—Harry Taylor, Town Clerk.

GLAMORGAN COUNTY COUNCIL. Mid-Glamorgan County Hospital, Quarella Road, Bridgend.—Applications are invited from registered medical practitioners with obstetrical experience who have held a house appointment for the appointment of a FEMALE TEMPORARY RESIDENT ASSISTANT MEDICAL OFFICER (B1) for the above-named hospital. Salary £350 per annum, rising by annual increments of £25 to £550, plus prevailing cost-of-living bonus and residential emoluments. All fees whatsoever received by the successful applicant whilst holding the appointment must be handed over to the County Council. The appointment will be terminable by one month's notice on either side. Applications should be sent to the County Medical Officer, County Hall, Cardiff, within ten days of the publication of this advertisement.—D. J. Parry, Clerk of the County Council, Glamorgan County Hall, Cardiff.

NORTHAMPTONSHIRE COUNTY COUNCIL, Park Hospital, Wellingborough (120 Service beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of JUNIOR RESIDENT MEDICAL OFFICER (A), vacant early in September, 1945. Salary is at the rate of £200 per annum, with full residential emoluments. There is a staff of visiting specialists. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise not exceeding one year. Applications should be sent as soon as possible to J. Alan Turner, Clerk of the County Council, County Hall, Northampton.

HERTFORDSHIRE COUNTY COUNCIL. (Medical Department). King Street Maternity Home, Watford.—Applications are invited for the post of RESIDENT OBSTETRIC OFFICER (B1) at the King Street Maternity Home, Watford. This home is a Part II Training School for Midwives. The accommodation, at present 35, is being increased to 51 beds. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The salary will be from £350 per annum, rising by £25 to £500 per annum, plus the usual residential emoluments. The commencing salary will depend on qualifications and experience. This vacancy is re-advertised owing to the indisposition of the person appointed. Application forms and particulars can be obtained from the County Medical Officer, County Hall, Hertford, to whom they should be returned by September 22, 1945.—Elton Longmore, Clerk of the County Council.

HERTS COUNTY COUNCIL, Wellhouse Hospital, Barnet (600 beds). HOUSE PHYSICIANS (A).—Applications are invited from registered medical practitioners, male and female, for the appointment immediately of two House Physicians (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts the appointment will be for a period of six months. Salary is at the rate of £150 per annum, will full residential emoluments. Applications to Medical Superintendent.

KINGSTON-UPON-HULL CORPORATION HEALTH DEPARTMENT. City Hospital and Sanatorium.—Applications are invited for the appointment of a TEMPORARY RESIDENT MEDICAL OFFICER (B1) at the above. The appointment is open to registered medical practitioners of either sex, who must be single and have had experience in general hospital work. Possession of the Diploma in Public Health, or similar qualification, and previous experience in a fever hospital or sanatorium will be regarded as additional qualifications. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R A M.C. The appointment is for a period of one year and the salary is £350 per annum, together with board, laundry, and residence. The appointment may be extended for more than one year, in which case the salary, subject to satisfactory service, will be increased by annual increments of £25 to a maximum of £450 per annum, plus increased cost-of-living bonus. Application forms may be obtained from, and should be returned to, the Medical Officer of Health, Guildhall, Kingston-upon-Hull, as early as possible.

MIDDLESEX COUNTY COUNCIL. JUNIOR ASSISTANT MEDICAL OFFICER (Anaesthetist (B2), Resident), required at CHASE FARM HOSPITAL, Enfield, Middx.—Applications invited from registered medical practitioners, including R practitioners now holding A posts. Salary £350 p.a. Board, lodging and laundry. War bonus (now £60 p.a., proportion only in cash). Whole-time duties such as Council may direct, under supervision of Medical Director. Appointment, subject to medical examination and one month's notice, is for six months, with possibility of extension to twelve months (except R practitioners). Post now vacant. Applications to Medical Director, "Z," of hospital. Application forms not provided. Closing date September 1, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL. LOCUM TENENS MEDICAL OFFICER (B1) at SHENLEY MENTAL HOSPITAL, nr. St. Albans (man or woman), required for long or short term. Experience in psychiatry preferable but not essential. Facilities for out-patient clinic experience and tuition. Salary £10 10s. per week, and emoluments consisting of full residential facilities. Suitably qualified R and W practitioners holding B2 appointments, also those holding B1 and rejected by the R.A.M.C., may apply. Applications to the Medical Superintendent.—C. W. Radcliffe, Clerk of the County Council.

BIRMINGHAM MATERNITY HOSPITAL (Associated to the Faculty of Medicine of the Birmingham University). HONORARY OBSTETRICIAN.—The Board of Management invites applications for the position of Honorary Obstetrician to fill the vacancy caused by the death of Sir Beckwith Whitehouse, M.S., F.R.C.S. Candidates must be registered medical practitioners, and must hold the Fellowship of the Royal College of Surgeons (England) or the Membership of the Royal College of Obstetricians and Gynaecologists. The appointment will be an annual one and the holder will be eligible for reappointment. The post is open to persons at present serving in H.M. Forces. Conditions and terms of appointment, together with a list of the members of the Appointing Committee to whom copies of the application should be sent, may be obtained on request from the undersigned. The last day for applications will be December 31, 1945.—Bernard Sylvester, House Governor, Birmingham Maternity Hospital, Loveday Street, Birmingham, 4.

NORTHUMBERLAND COUNTY COUNCIL. Wooley Sanatorium, Nr. Hexham.—Applications are invited from registered medical practitioners for the appointment of TEMPORARY MEDICAL SUPERINTENDENT at Wooley Sanatorium (184 beds). Applicants should have had special experience in the diagnosis and treatment of pulmonary tuberculosis and in institutional administration. The candidate appointed will also be required to act as Tuberculosis Officer for the Hexham Division of the County. The salary will be £650, rising by biennial increments of £50 to £850 per annum, with emoluments, house, coal, and light, valued for superannuation purposes at £150 per annum. The commencing salary on this scale will be determined according to experience. The appointment is subject to the provisions of the Local Government Superannuation Act, 1937, and the successful candidate will be required to pass a medical examination. The appointment will be determinable by three months' notice on either side. This is a temporary appointment, but there is a vacancy on the permanent establishment. Applications, accompanied by copies of three recent testimonials, upon forms to be obtained from the County Medical Officer at the address below, should be returned to him not later than September 28, 1945.—C. Harold Carter, Clerk of the County Council, County Hall, Newcastle-uupon-Tyne, 1.

SURREY COUNTY COUNCIL. Kingston County Hospital (500 beds), Wolverton Avenue, Kingston-on-Thames.—Applications are invited from registered medical practitioners, male and female, for the appointment of ANAESTHETIST (B1). The position is temporary and is subject to one month's notice on either side. Preference will be given to candidates holding D.A. qualification. Suitably qualified R and W practitioners now holding B2 posts are invited to apply. Applications from R practitioners holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £550 per annum plus war bonus plus full residential emoluments. Apply to Medical Superintendent by September 7, 1945.

YORK COUNTY HOSPITAL (222 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), vacant September 22, 1945, whose main duties are in the Eye, Ear, Nose, and Throat Department (37 beds with busy Out-patient Clinics), but who will share in the general work of the hospital, also Casualty Duty, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary is at the rate of £175 per annum, with full residential emoluments. This post is recognized for D.O.M.S. and D.L.O. examinations. Applications to be sent to the undersigned immediately.—J. R. Mackrill, Secretary.

ALTRINCHAM GENERAL HOSPITAL, nr. Manchester (100 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (B2). Salary at the rate of £150 per annum, with full residential emoluments. R practitioners now holding A posts may apply, when appointment is limited to six months. Address applications to the General Superintendent.

NOTICES

MEDICAL REGISTRATION COUNCIL
NOTICE OF ELECTION
MEDICAL PRACTITIONERS' ACT, 1927

1. Notice is hereby given, pursuant to the Medical Practitioners' Act, 1927, and the Rules thereunder, that the Returning Officer will at 68, Fitzwilliam Square, Dublin, on Monday, the 3rd day of September, 1945, now next ensuing, between the hours of 10 a.m. and 12 noon, proceed to the nomination, and, if there is no opposition, to the election of two direct representatives to be members of the Medical Registration Council. Every registered medical practitioner resident in Ireland is qualified to be nominated as a candidate. Each candidate must be nominated by a separate nomination paper. Every registered medical practitioner resident in Ireland is entitled to take part in nominating two candidates, but no more. Every nomination paper must state the names, address, and registered qualification or qualifications of the candidate nominated; it must be signed by not less than twelve registered medical practitioners resident in Ireland, as nominating such candidate, and the address and registered qualification or qualifications of each medical practitioner so signing must be appended to his signature. Every nomination paper must contain a declaration in writing, signed by the person nominated, acknowledging that such person consents to be nominated.

2. Forms of nomination paper may be obtained at 68, Fitzwilliam Square, Dublin, between the hours of 10 a.m. and 12 noon on any day (not being a Sunday or public holiday) before the said 3rd day of September, 1945. Any application for a nomination paper to be sent by post must be accompanied by a prepaid addressed envelope. Every nomination paper must be delivered to the Returning Officer by post or otherwise either at the place above appointed for the purpose between the hours of 10 a.m. and 12 noon on the 3rd day of September, 1945, or at any place at which the Returning Officer may be found at any time at any day before the said 3rd day of September, 1945. In the event of the election being contested voting papers will be issued to the persons entitled to vote thereat as soon as practicable after the said 3rd day of September, 1945, and the day for the counting of the votes will be Saturday, the 13th day of October, 1945. Votes cast by voting papers received by the Returning Officer on or after the said 13th day of October, 1945, will not be counted.

Dated this 21st day of August, 1945.—Joseph W. Bigger, Returning Officer.

APPLICANTS ARE ADVISED not to send original testimonials when replying to advertisements. Copies will answer the purpose quite as well, and in the event of their being lost or mislaid no inconvenience will ensue.

THE FACT THAT GOODS made of raw materials in short supply owing to war conditions are advertised in this Journal should not be taken as an indication that they are necessarily available for export.

Insurance Acts Committee

Chairman of the Local Medical and Panel Conference.
Six elected by Representative Body :
Dr. F. Gray, London.
Dr. D. L. S. Johnston, Halifax.
Dr. J. F. Lambie, Glasgow.
Dr. Mona Macnaughton, Newcastle-upon-Tyne.
Dr. S. Wand, Birmingham.
1 vacancy (Northern Ireland).
With twenty-seven Direct Representatives of Local Medical and Panel Committees in Great Britain and Northern Ireland, six to be elected by the Annual Conference of Representatives of Local Medical and Panel Committees, one nominated by the Hospitals Committee, one nominated by the Medical Women's Federation, one nominated by the Society of Medical Officers of Health, with power to co-opt.

Journal Committee

Dr. O. C. Carter, Bournemouth.
Dr. R. W. Cockshut, London.
Dr. Mary Esslemont, Aberdeen.
Dr. R. G. Gordon, Limpley Stoke.
Dr. W. N. Leak, Winsford.
Dr. J. C. Matthews, Downton.
Dr. L. J. Picton, Holmes Chapel.
Dr. H. Robinson, Brentwood.
Chairman of the Central Ethical Committee.
1 member to be appointed by the Organization Committee.

Naval and Military Committee

Dr. R. C. L. Burges, Birmingham.
Major-General R. H. Candy, London.
Col. A. M. Johnson, Bury.
Major-General R. W. D. Leslie, Nottingham.
Col. A. H. Proctor, Southport.
Air Marshal Sir Victor Richardson, Gerrards Cross.
Dr. R. J. Toleman, Oxford.
1 vacancy.
1 representative from each of the following: Royal Naval Medical Service, Royal Army Medical Corps, Royal Air Force Medical Service, Indian Medical Service, Royal Naval Volunteer Reserve, Royal Army Medical Corps (Territorial Army).

Northern Ireland Committee

President and Honorary Secretary of the Northern Ireland Branch.
Members of Council representing Northern Ireland Branch :
Dr. J. M. Hunter, Portrush.
Mr. C. J. A. Woodside, Belfast.
1 representative elected by each Division in Northern Ireland Branch.

Organization Committee

Dr. R. W. Cockshut, London.
Dr. W. E. Dornan, Sheffield.
Dr. F. E. Gould, Birmingham.
Dr. F. Gray, London.
Dr. J. C. Matthews, Downton.
Dr. J. A. Pridham, Weymouth.
Dr. F. A. Roper, Exeter.
Capt. S. Laurie Smith, Brookwood.

Public Health Committee

Dr. R. Gordon Cooke, Derby.
Dr. H. H. Goodman, Newcastle-upon-Tyne.
Dr. J. M. Gibson, Huddersfield.
Prof. J. Johnstone Jervis, Leeds.
Dr. P. Macdonald, York.
Dr. N. Pick, Barnsley.

Dr. D. S. Pracy, Atherstone.
Dr. J. A. Pridham, Weymouth.
Dr. J. Riddell, Edinburgh.
Dr. C. O. Stallybrass, Liverpool.

Two Members of Council elected by Public Health Service Members :
Dr. J. Fenton, London.
Dr. R. H. H. Jolly, Wolverhampton.

2 members to be nominated by the Society of Medical Officers of Health.
1 member to be appointed by the General Practice Committee.
1 member to be appointed by the Hospitals Committee.
With power to co-opt 3 additional members.

Science Committee

Mr. A. Lawrence Abel, London.
Prof. R. S. Aitken, Aberdeen.
Mr. V. Zachary Cope, London.
Sir Henry H. Dale, London.
Dr. R. P. St. L. Liston, Manchester.
Mr. A. M. A. Moore, London.
Mr. L. S. Pyrah, Leeds.
Mr. Eric Steeler, London.
Prof. R. J. Willan, Newcastle-upon-Tyne.
Mr. A. Dickson Wright, London.

Scottish Committee

Members of Council who represent Scottish Branches :
Dr. P. Martin Brodie, Edinburgh.
Dr. W. D. Frew, Kilmarnock.
Dr. I. D. Grant, Glasgow.
Mr. I Simson Hall, Edinburgh.
Dr. G. MacFeat, Douglas, Lanarkshire.
Mr. John H. Otty, Aberdeen.

23 Members elected by Divisions in Scotland.
1 nominated by Royal College of Physicians, Edinburgh.
1 nominated by Royal College of Surgeons, Edinburgh.
1 nominated by Royal Faculty of Physicians and Surgeons of Glasgow.
With power to co-opt not more than 2.

Special Practice Committee

Prof. A. H. Burgess, Cheadle, Cheshire.
Mr. Hugh Carson, Birmingham.
Dr. H. Gainsborough, London.
Mr. A. M. A. Moore, London.
Mr. D. Watson, Bradford.
Dr. A. Lucas Young, Eastbourne.
3 appointed by the Consultants and Specialists Group Committee for England and Wales.
1 appointed by the Consultants and Specialists Group Committee for Scotland.
1 appointed by the Consultants and Specialists Group Committee for Northern Ireland.
1 appointed by the General Practice Committee.
1 appointed by the Public Health Committee.
1 appointed by the Hospitals Committee.
1 appointed by the Insurance Acts Committee.
Each committee of any other Special Group of which the members are engaged predominantly in private consulting or specialist practice shall have power to appoint 1 additional member—namely, Radiologists, Full-time Non-Professorial Medical Teachers, Laboratory and Research Workers, Ophthalmic, Pathologists, Psychological Medicine, Orthopaedic, Spa Practitioners, Physical Medicine.

Welsh Committee

Members of Council representing Branches in Wales and Monmouthshire :
Dr. H. R. Frederick, Port Talbot.
Dr. W. V. Howells, Swansea.
Dr. J. A. Ireland, Shrewsbury.

Secretaries of the Welsh Branches :
Mr. D. N. Rocyn Jones, Cardiff.
Dr. L. W. Jones, Llanfairpwll.

Chairman and Secretaries of Welsh Standing Contract Practice Subcommittee.
1 member appointed by each Division wholly situate in Wales, including Monmouthshire.
With power to co-opt not more than 2.

GROUP COMMITTEES

Consultants and Specialists Group Committee

England and Wales :
Mr. D. A. Abernethy, Oxford.
Dr. R. H. Balfour Barrow, Winchester.
Dr. Geoffrey Bourne, London.
Mr. R. St. L. Brockman, Sheffield.
Dr. J. M. H. Campbell, London.
Prof. P. C. P. Cloake, Birmingham.
Dr. S. Whately Davidson, Newcastle-upon-Tyne.
Dr. C. J. Fuller, Exeter.
Prof. W. MacAdam, Leeds.
Mr. H. J. McCurrich, Hove.
Mr. S. A. S. Malkin, Nottingham.
Mr. J. T. Morrison, Liverpool.
Prof. J. A. Nixon, Bristol.
Mr. L. E. C. Norbury, London.
Dr. B. T. Parsons-Smith, London.
Prof. H. Platt, Manchester.
Dr. F. Roberts, Cambridge.
Prof. G. I. Strachan, Cardiff.

Scotland :
Prof. R. C. Alexander, Dundee.
Dr. G. A. Allan, Glasgow.
Mr. R. L. Beveridge, Dumfries.
Dr. John Eason, Edinburgh.
Dr. A. Garrow, Glasgow.
Dr. John Henderson, Glasgow.
Dr. F. K. Smith, Aberdeen.

Northern Ireland :
Dr. F. M. B. Allen, Belfast.
Dr. Sloan M. Bolton, Portrush.
Prof. P. T. Crymble, Belfast.
Mr. S. T. Irwin, Belfast.
Prof. C. G. Lowry, Belfast.
Mr. C. H. G. Macafee, Belfast.
Dr. I. H. McCaw, Belfast.
Dr. F. P. Montgomery, Belfast.
Prof. W. W. D. Thomson, Belfast.
Mr. J. R. Wheeler, Belfast.

Full-time Non-professorial Medical Teachers, Laboratory and Research Workers Group Committee

Dr. D. P. Cutherbertson, London.
Dr. M. Grace Eggleton, Leatherhead.
Dr. F. S. Fowweather, Leeds.
Capt. A. D. T. Govan, Birmingham.
Dr. H. L. H. H. Green, Cambridge.
Dr. W. E. Gye, London.
Dr. A. C. Lendrum, Glasgow.
Dr. W. Susman, Manchester.

Ophthalmic Group Committee

(*Shortly to be elected*)

Orthopaedic Group Committee

Mr. W. Rowley Bristow, West Byfleet.
Mr. B. H. Burns, London.
Mr. N. St. J. G. D. Buxton, London.
Mr. V. H. Ellis, London.
Mr. F. W. Holdsworth, Sheffield.
Mr. S. A. S. Malkin, Nottingham.
Prof. H. Platt, Manchester.
2 vacancies.

Pathologists Group Committee

Dr. S. C. Dyke, Tettenhall.
Dr. J. S. Faulds, Carlisle.
Dr. F. S. Fowweather, Leeds.
Dr. G. W. Goodhart, London.
Dr. J. G. Greenfield, Enfield.
Dr. A. G. Shera, Eastbourne.
Dr. A. F. S. Sladden, Swansea.
Dr. F. B. Smith, Preston.
Dr. Janet M. Vaughan, Slough.

Physical Medicine Group Committee

Dr. P. Bauwens, London.
Dr. C. W. Buckley, Buxton.
Dr. F. S. Cooksey, Epsom.
Dr. J. Cowan, Stockport.
Dr. J. Mennell, London.
Sir Morton Smart, London.
Sir R. Stanton Woods, London.
Capt. H. Burt, Kingston-on-Thames.
1 vacancy.
President for the time being of the Physical Medicine Section of the Royal Society of Medicine.
Representative of Spa Practitioners Group Committee.
Representative of Radiologists Group Committee.

Psychological Medicine Group Committee

Dr. N. M. H. Burke, St. Albans.
Prof. Millais Culpin, London.
Dr. R. Eager, Exeter.
Dr. T. Lindsay, Caterham.
Prof. J. H. MacDonald, Luss.
Dr. W. G. Masefield, Brentwood.
Dr. Doris M. Odlum, Bournemouth.
Lieut.-Col. A. A. W. Petrie, Sutton.
Dr. R. M. Stewart, Leavesden.

Radiologists Group Committee

Dr. M. H. Jupe, London.
Lieut.-Col. R. Boulton-Myles, Worthing.
Dr. Ralston-Paterson, Manchester.
Dr. R. E. Roberts, Liverpool.
Dr. S. Cochrane Shanks, London.
Dr. C. G. Teall, Birmingham.

Spa Practitioners Group Committee

Dr. L. H. H. Boys, Woodhall Spa.
Dr. J. B. Burt, Bath.
Dr. F. Clayton, Leamington.
Dr. E. C. Cosgrove, Buxton.
Dr. A. R. Neligan, Droitwich.
Dr. W. Yeoman, Harrogate.

OTHER COMMITTEES

Joint Committee of B.M.A. and Trades Union Congress

B.M.A. Representatives :
Dr. H. Guy Dain, Birmingham (Chairman of Council).
Prof. A. H. Burgess, Cheadle, Cheshire.
Dr. R. W. Cockshut, London.
Dr. J. Fenton, London.
Dr. E. A. Gregg, London.
Dr. J. A. L. Vaughan Jones, Leeds.
Mr. R. L. Newell, Cheadle, Cheshire.
Dr S Wand, Birmingham.

Building Committee

Mr. H. S. Souttar, London (President).
Dr. J. B. Miller, Bishopbriggs (Chairman of Representative Body).
Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. J. W. Bone, Luton (Treasurer).
Mr. L. Dougal Callander, Doncaster.
Dr. O. C. Carter, Bournemouth.
Mr. A. Staveley Gough, Watford.
Mr. A. M. A. Moore, London.
Dr. J. G. Thwaites, Brighton.
Mr. A. Dickson Wright, London.

Care of Children Committee

Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. Janet K. Aitken, London.
Dr. W. Mary Burbury, Manchester.
Dr. J. Fenton, London.
Dr. W. F. Gaisford, Rowington, Warwicks.
Dr. H. C. Gilmore, London.
Dr. R. G. Gordon, Limpley Stoke.
Prof. L. G. Parsons, Birmingham.
Dr. C. O. Stallybrass, Heswall.
Dr. J. G. Thwaites, Brighton.

Compensation and Superannuation Committee

Mr. H. S. Souttar, London (President).
Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. G. F. Buchan, London.
Dr. E. A. Gregg, London.
Dr. J. A. L. Vaughan Jones, Leeds.
Dr. A. T. Rogers, Bromley.
Dr. S. Wand, Birmingham.

Committee re Education Act

Mr. H. S. Souttar, London (President).
Dr. J. B. Miller, Bishopbriggs (Chairman of Representative Body).
Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. J. W. Bone, Luton (Treasurer).
Dr. J. M. H. Campbell, London.
Dr. W. E. Dornan, Sheffield.
Dr. J. Fenton, London.
Mr. A. M. A. Moore, London.
Mr. O. G. Morgan, London.
Mr. R. L. Newell, Manchester.
Dr. Doris Odlum, Bournemouth.
Mr. F. C. Ormerod, London.
Dr. J. A. Pridham, Weymouth.
Dr. S. Wand, Birmingham.
Mr. N. E. Waterfield, Little Bookham.

International Relations Committee

Mr. H. S. Souttar, London (President).
Dr. J. B. Miller, Bishopbriggs (Chairman of Representative Body).
Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. J. W. Bone, Luton (Treasurer).
Dr. Alfred Cox, London.
Dr. John Clayre, Southampton.
Dr. S. C. Dyke, Wolverhampton.
Dr. J. C. Matthews, Downton.
Dr. J. A. Pridham, Weymouth.
Capt. S. Laurie Smith, Brookwood.
Dr. G. de Swiet, London.
Dr. N. E. Waterfield, Little Bookham.
Chairman of Organization Committee.
Chairman of Journal Committee.

Medical Curriculum Committee

Mr. H. S. Souttar, London (President).
Dr. J. B. Miller, Bishopbriggs (Chairman of Representative Body).
Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. J. W. Bone, Luton (Treasurer).
Dr. Janet K. Aitken, London.
Prof. Henry Cohen, Liverpool.
Mr. V. Zachary Cope, London.
Dr. Anthony Feiling, London.
Dr. R. G. Gordon, Bath.
Dr. F. Gray, London.
Dr. E. A. Gregg, London.
Dr. G. MacFeat, Douglas, Lanarkshire.
Mr. R. L. Newell, Manchester.
Prof. L. G. Parsons, Birmingham.
Dr. F. M. Rose, Preston.

Mr. I Simson Hall, Edinburgh.
Prof. Sydney Smith, Edinburgh.
Dr. J. G. Thwaites, Brighton.
1 representative of British Medical Students Association.

Parliamentary Elections Committee

Mr. H. S. Souttar, London (President).
Dr. J. B. Miller, Bishopbriggs (Chairman of Representative Body).
Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. J. W. Bone, Luton (Treasurer).
Mr. V. Zachary Cope, London.
Dr. H. R. Frederick, Port Talbot.
Dr. E. A. Gregg, London.
Mrs. Philippa Martin, London.
Dr. J. G. Thwaites, Brighton.
Dr. S. Wand, Birmingham.

Protection of Practices Committee

Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. J. W. Bone, Luton (Treasurer).
Dr. B. E. A. Batt, Bury St. Edmunds.
Dr. A. Beauchamp, Birmingham.
Dr. H. C. Boyde, London.
Dr. P, Martin Brodie, Edinburgh.
Dr. Alfred Cox, London.
Dr. R. Forbes, London.
Dr. F. Gray, London.
Dr. E. A. Gregg, London.
Dr. W. V. Howells, Swansea.
Dr. J. A. L. Vaughan Jones, Leeds.
Dr. R. G. McGowan, Manchester.
Mr. Weldon P. T. Watts, Newcastle-upon-Tyne.

Public Relations Committee

Dr. H. Guy Dain, Birmingham (Chairman of Council).
Dr. J. W. Bone, Luton (Treasurer).
Mr. A. Staveley Gough, Watford.
President of Royal College of Physicians (or nominee).
President of Royal College of Surgeons (or nominee).
3 representatives of Insurance Acts Committee:
  Dr. E. A. Gregg, London.
  Dr. J. Hallam, Burslem.
  Dr. A. T. Rogers, Bromley.

Rehabilitation Committee

Dr. H. Guy Dain, Birmingham (Chairman of Council).
Mr. J. D. M. Cardell, London.
Air Commodore O. Clarke, London.
Dr. F. S. Cooksey, Epsom.
Mr. V. Zachary Cope, London.
Brigadier F. A. E. Crew, London.
Major J. J. R. Duthie, Aberdeen.
Prof. A. W. M. Ellis, Oxford.
Prof. T. Ferguson, Falkirk.
Mr. W. C. Gissane, Birmingham.
Dr. I. D. Grant, Glasgow.
Dr. E. A. Gregg, London.
Dr. F. R. G. Heaf, Berkhamsted.
Brigadier F. D. Howitt, London.
Dr. Donald Hunter, London.
Dr. J. T. Ingram, Leeds.
Dr. J. A. L. Vaughan Jones, Leeds.
Prof. R. E. Lane, Manchester.
Dr. A. J. Lewis, London.
Dr. G. MacFeat, Douglas, Lanarkshire.
Mr. A. H. McIndoe, London.
Dr. H. M. C. Macaulay, London.
Mr. A. Miller, Glasgow.
Mr. A. M. A. Moore, London.
Dr. H. B. Morgan, M.P., London.
Dr. A. R. Neligan, Droitwich.
Mr. R. L. Newell, Cheadle, Cheshire.
Mr. D. C. Norris, London.
Dr. Donald Stewart, Birmingham.
Dr. E. H. Strange, London.
Dr. S. Wand, Birmingham.
Sir Reginald Watson-Jones, London.

The Negotiating Committee

16 *Representatives of the B.M.A.*:
  Mr. H. S. Souttar, London (President).
  Dr. J. B. Miller, Bishopbriggs (Chairman of Representative Body).
  Dr. H. Guy Dain, Birmingham (Chairman of Council).
  Dr. J. A. Brown, Birmingham.
  Dr. F. Gray, London.
  Dr. E. A. Gregg, London.
  Mr. R. L. Newell, Manchester.
  Dr. S. Wand, Birmingham.
  Dr. P. Martin Brodie, Edinburgh.
  Dr. J. F. Lambie, Glasgow.
  Dr. A. T. Rogers, Bromley.
  Dr. J. A. L. Vaughan Jones, Leeds.
  Dr. G. H. Sedgwick, Rotherham.
  Dr. J. C. Arthur, Low Fell.
  Dr. S. A. Winstanley, Urmston.
  Dr. R. W. Cockshut, London.
3 Representatives of Royal College of Physicians:
  Lord Moran, London.
  Dr. H. E. A. Boldero, Stanmore.
  Prof. Henry Cohen, Liverpool.
3 Representatives of Royal College of Surgeons:
  Sir Alfred Webb-Johnson, London.
  Mr. V. Zachary Cope, London.
  Mr. A. Tudor Edwards, London.
Representatives of Royal College of Obstetricians and Gynaecologists:
  Mr. Eardley L. Holland, London.
  Mr. A. A. Gemmell, Liverpool.
3 Representatives of Royal Scottish Medical Corporations:
  Prof. C. McNeil, Edinburgh.
  Mr. H. Wade, Edinburgh.
  Dr. J. H. Macdonald, Luss.
2 Representatives of Society of Medical Officers of Health:
  Dr. G. F. Buchan, London.
  Dr. R. H. H. Jolly, Wolverhampton.
1 Representative of Medical Women's Federation:
  Dr. Mary Esslemont, Aberdeen.
1 Representative of Society of Apothecaries:
  Dr. H. Seaward Morley, Midhurst.

MEDICAL SICKNESS AND LIFE ASSURANCE

The annual general meeting of the Medical Sickness, Annuity and Life Assurance Society, Ltd., was held at the house of the Medical Society of London on July 23, Mr. R. J. McNeill Love presiding. Presenting the report of the sixtieth year of the Society's work, the chairman said that at the previous meeting he had announced further concessions concerning payment of sickness benefit to members over-seas who had become incapacitated by sickness or accident not due to enemy action. As the Government had announced it would not interfere for the present with the sale and purchase of practices, the Society was proceeding with the scheme for lending money for such purchase. The rate of interest was fixed at 5% and was independent of bank rate. Graduated payments of capital were worked out so as to lessen the cost in early years. Since the scheme was started in 1926 loans had been granted to 381 practitioners for a total of £593,255, of which the balance outstanding was £107,697. Turning to the annual accounts, Mr. McNeill Love said that the new business for life assurance fund totalled £224,840. Claims by death amounted to £19,667. In the sickness fund the premium income was £134,241, and the benefit paid £74,522. The total fund now amounted to £1,196,916. The funds of the Society had increased to over £3,000,000, of which about half was in British Government securities. The Society was still at Chesterton, Cirencester, but it was hoped that the next meeting would be held in the new offices at 7, Cavendish Square, London.

The report was adopted unanimously, and the retiring directors, Dr. G. Roche Lynch and Dr. A. Hope Gosse, were re-elected.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Mr. W. Muir Dickson, F.R.C.S., at 144, Harley Street, London, W.1; Dr. Hugh Morris, at 11, St. John Street, Manchester; and Mr. Hope Carlton, F.R.C.S., at 86, Brook Street, Grosvenor Square, London, W.1.

The Medical Planning Committee set up by the Council of the New Zealand branch of the B.M.A. to review the present state of the medical services in New Zealand considered that medical education came within its terms of reference, and it has now issued a first section of its report dealing with undergraduate teaching and training. This will be followed at an early date by a second section on postgraduate education, which will also make recommendations arising from both parts of the report.

Correspondence

Demobilization of Navy M.O.s

SIR,—I am just sailing to an appointment in the Pacific zone. My demobilization group is 20, and after 6 years' service in all parts of the world I am hoping to settle in practice soon. On inquiry at the Admiralty I find that there is no plan yet to release more than the first seven groups of medical officers. I can get no approximate date for my release, and the only consolation offered for this oversea appointment is that I shall probably be returned to this country a few weeks after my demobilization date. This is not good enough, and hundreds of people like myself are disgruntled. We can only hope that the C.M.W.C. and the medical members of Parliament will not forget us.—I am, etc.,

"ANOTHER SURG. LIEUT.-CMDR., R.N.V.R."

Doctors and the New Government

SIR,—On the threshold of peace the people of Britain made a great decision with a courage matching that with which they went to war. They chose a new Government and gave it power to reconstruct the basis of their national life. They rejected the more cautious method of trying to improve on all the old foundations, no doubt because they believed that many of these were too shaky.

The medical profession had already expressed its disfavour with the National Health Service proposals of the Coalition Government. Because it had done so, the Press and many people appear to believe that it will be equally anxious to reject the proposals of the new Government. Is this necessarily to be?

Doctors certainly sought to safeguard their profession in a system which condemned a planned economy and acclaimed private enterprise as the sure road to success. It does not follow that they will be slow to co-operate when most people have decided that there is a better road.

It may be some time before new proposals are made known and before the Negotiating Committee meets the new Minister of Health. Meanwhile, it would be well to ensure that the latest medical opinion will be truly represented. May I suggest that the B.M.A. might take advantage of the interval by reopening discussion among its members?—I am, etc.,

R. R. WILSON,
Edinburgh. Temp.-Surg. Lieut., R.N.V.R.

Doctors and the Election

SIR,—I do not think Dr. Cyril Sherris's letter (*Supplement*, Aug. 11, p. 44) should go unchallenged, for he asserts that the public has given a decided answer in favour of a whole-time National Health Service, as advocated by the Labour Party.

Lord Quickswood, writing in the *Sunday Times* of Aug. 12, said: "The defects of our representative system which have long been known, were vividly brought to notice. The Proportional Representation Society point out that if the Labour Party had obtained only the number of seats proportioned to the votes given to it, they would have had (out of 624 contested seats) 299 instead of 388; the Conservatives 248.

instead of 209; and the Liberal Party 57, instead of 11—that is to say, the Labour Party would just have failed to get an absolute majority."

It would seem, therefore, that the public has *not* approved of the Labour Party's idea of a National Health Service.—I am, etc.,

London, W.1. GEOFFREY DUCKWORTH.

Socialization of Medicine

SIR,—Now that the people have voted for Socialism it would seem imperative that the medical profession should at once stop considering how "to patch up the old hulk" (which is what the late Government in a White Paper declared to be its policy), and to begin to consider how to achieve a real socialization of the profession.

There are two possibilities. One is to "socialize" the doctors through a State medical service; this makes all doctors servants of the State. The disadvantage of such a procedure is that it disrupts the direct relationship between the doctor and his patient, upon which ethic medicine is based.

The alternative is to "socialize" the tools and instruments of medicine so that all doctors are provided with that which is necessary to them to carry on their profession with due efficiency and dignity. It must be remarked that every medical student is trained in the use of the tools and instruments of medicine, and that every doctor, once qualified, is denied their use unless he is lucky enough to become a specialist, or rich enough to afford to buy them for himself.

One method of socializing the tools and instruments of medicine has already been put forward by Dr. Scott Williamson in *Physician, Heal Thyself.* True, it is a very radical change in medical organization and in the organization of medical teaching that is advanced in this book. But will anything but a radical change bring medicine to that state of efficiency demanded by the people?—I am, etc.,

Coventry. K. E. BARLOW.

Short-service Commissions and Gratuities

SIR,—To the spate of correspondence about medical man-power and demobilization may I add one further comment. Many medical officers obtained short-service commissions in 1937 and 1938 and completed their five years in 1942 and 1943 respectively. Surely their "conscripted" service dates from the completion of their five years' service and not from the outbreak of war.

As has already been commented on, their gratuity is ten times that of the wartime medical officer, yet they enjoy the same privileges for demobilization, and in some cases their "conscripted" service will be shorter than that of the wartime medical officer called up in 1941 or 1942.—I am, etc.,

"M.O. BURMA."

Gratuities

SIR,—Upon joining the R.A.F. Medical Service in 1939 we were told that war gratuities would most likely be based on the same terms as those of a short-service commission. This was accepted in good faith and many medical officers looked forward to this nest-egg to come back to whatever else might happen. It came as a surprise and shock that we were only to be paid a gratuity at the same rates as a general service officer (wartime). Now extended Service commissions are announced to non-regular officers carrying with them a suitable gratuity, which seems to indicate that it was intended in 1939 to pay a gratuity for war service based on short-service terms, but something has come about to stop it.

It is very gratifying that the profession as a whole have contributed to a Medical War Relief Fund to assist men from the Services returning to civilian practice, but I suggest that it would be far better if the profession as a whole, through the B.M.A., would press for the payment of the proper gratuity. After all, it has been earned by many of us, and would go a long way towards starting again in practice without having to seek help from the relief fund. I hope that other medical officers will now take up this matter as well to press for payment of the war gratuity on short-service commission terms.—I am, etc.,

JAMES LOWTHER.

Acklington, Nr. Morpeth.

Divide and Govern

SIR,—At the Annual Representative Meeting Mr. Lawrence Abel publicly suggested that of all doctors medical officers of health ought to have the lowest scale of pay (*Supplement*, Aug. 4, p. 33). Such a remark is calculated to start disunity in the profession, especially as the 4,000 doctors in the existing public health services are fully aware that their training is far longer than that of most practitioners: the D.P.H. course alone occupies a year, and it takes several years to obtain the necessary postgraduate experience in fevers, tuberculosis, V.D., children's diseases, etc.

Mr. Abel seems to despise those who are not clinicians. It is worth while to remember that, except in large cities and counties, medical officers of health have numerous clinical duties. For example, in a town of about 50,000 inhabitants I devote about 30 hours weekly to clinical work (fever hospital, fever consultations, infant welfare clinics, school medical examinations, etc.) and about 30 hours to administrative duties. It is also worth while to remember that people who combine administrative and clinical duties do not find that the former are easier and less exacting.

Consider what would happen if, as a result of Mr. Abel's remarks, the salaries of medical officers of health remained low. Obviously the salaries of assistant medical officers of health (many of whom reach the retiring age while still in that category) would have to be still lower. But most assistant medical officers of health are engaged mainly or wholly in clinical work: their main difference from general practitioners lies in the length of training. Hence the salaries of practitioners would fall correspondingly. Indeed, having fixed the salaries of public health workers at a low level, the Government could argue that it must keep practitioners' salaries equally low to prevent the younger assistant medical officers of health from switching over to general practice.

This is no time for internal strife in the profession. Beware of the old motto, *Divide et impera.* To secure decent conditions for the whole profession it is vital that all of us—surgeons and gynaecologists, physicians and medical officers of health, research workers, factory doctors, and (the backbone of the profession) general practitioners—should stand firmly united. In unity lies strength; in sectional feuds lies the ruin of the profession and of the medical services of Britain.—I am, etc.,

Mansfield. I. A. G. MACQUEEN.

Insurance Practitioner's Failure to Visit

SIR,—I trust that the action of the G.M.C. in erasing the name of a practitioner for failure to visit, as reported in the *Supplement* of July 28 (p. 16), will not pass without comment. Although in your reports only an outline of the proceedings is possible, on several occasions lately it has appeared that the livelihood of medical men has been taken away on comparatively trivial pretexts. Certification has played a large part in the proceedings, which is very ominous in view of the State medical service with which we are now faced. It is a serious thing that the G.M.C. is a court against which there is no appeal. There is no other body in our corporate life which has the power to take away summarily a man's power to support himself and his family. As medical men we have no other trade to which to turn our hand. It appears to me that this power should only be exercised in cases where a man is obviously unfit for the profession. We accept the G.M.C.'s rulings with never a protest.

In the case in point each of these panel patients—and they were all panel patients—had their remedy. They could have transferred to the list of another doctor or they could have called in another doctor whose fees would have been deducted from Dr. Flatley's remuneration. Dr. Flatley's contract was not with his patients but with the panel committee. The panel committee could have had him removed from the panel. But even at the time of the hearing Dr. Flatley was still on the Salford panel. The neglect of patients cannot be defended, but if these had been private patients the question of taking away Dr. Flatley's livelihood would not have occurred to them. I frankly do not consider that Dr. Flatley acted in an "infamous" way. From his own evidence he is a sick man, and not only that, he was surrounded with unusual difficulties. There may have been other relevant evidence which contributed to the decision of the G.M.C., but on the evidence reported I submit that an injustice has been done to Dr. Flatley, of whom, by the way, I have not the slightest acquaintance. It is a pity in my judgment that there is no court of appeal.—I am, etc.,

Histon, Cambs. A. E. MOORE.

Doctors' Cars

SIR,—The two letters on doctors' cars by Dr. T. Cradock Henry and Dr. Ian M. Jefferiss (*Supplement,* July 21, p. 13) prompt me to write not only to say I concur but to add some things they omit.

During the six weary war years the cars of civilian doctors have given hard service, through black-out and blitz, day and night, week-days and Sundays, summer and winter. They have had little or no servicing as we knew it in pre-war days. Indeed, in those bygone happy days a car was designed for about two years' work, after which it was traded in for a new one. Great credit is due to the motor designers for giving us cars that would render such faithful mechanical service as we have had from them.

But there is a limit. Our cars are wearing out; indeed, some of them, like us, are actually worn out. For the past six years we have been unable to put our cars into dock, even if we could find a dock into which to put them. Garages, formerly efficient and obliging are now scarce and almost uncivil; if you are foolish enough to run out of petrol or, worse, break down after 5 p.m., Heaven help you, for there is no garage that will. Moreover, the conditions which prevailed during the war years look like persisting. To-day a doctor's car may need re-boring and other vital replacements and adjustments to be made to it; yet a doctor cannot get these important matters attended to for at least two reasons. First, it is well-nigh impossible to get the loan of a replacement car temporarily, and, secondly, the time lag is insufferable, complicated by the introduction of basic petrol and labour shortage.

Yet, during all the war years and even up to the time of writing, I know of no organized effort on the part of either the B.M.A. or any other authoritative body to get matters ameliorated. I remember a poster in the early days of the war: "Your freedom is in peril, defend it with all your might." Now I think it will be conceded that civilian doctors have rallied to this call, but what about the freedom? Before the days of this poster I could buy what car I liked, when I liked, where I liked. I could have as much petrol as I could afford by day or by night; I could have repairs, replacements, additions, necessary or otherwise, at competitive prices and with minimum of delay; and when you have contrasted that picture with the one of to-day, you can come to only one conclusion—the motoring doctor can "go to . . . Jericho."

I am hoping that other doctors will give voice and ask the Association to act, and to act quickly and effectively.—I am, etc.,

Petts Wood. B. RICHARDSON BILLINGS.

⁂ The B.M.A. has obtained from the Ministry of War Transport an assurance that a very high priority is given to members of the profession in the allocation of new cars now being released to civilian users. Similarly, through its regional machinery, the Ministry is prepared to expedite repairs and replacements for doctors' cars (*Supplement*, March 24, p. 45). Throughout the war the supply of petrol to doctors has been under the supervision of medical advisers to Divisional Petroleum Officers.—ED., *B.M.J.*

Illogical

SIR,—Two paragraphs from a political correspondent's notes in a Sunday paper are significant in showing the illogical attitude of those who support the new Government. "Mr. Shinwell," the paper says, "before taking final decisions" (on the matter of nationalization of the coal mines) "*will be guided by the views of* [among others] *the National Union of Mineworkers.*" So far so good, but in the matter of a National Health Service the paper says: "Whether the amendments sought by the medical profession will be accepted by the Government is doubtful at the moment." Why should the views of the workers in one phase of national life be taken as guidance and the views of another group be considered in a different light? Is it because the medical profession can never enforce its views by a "go-slow" campaign?—I am, etc.,

London, N.6. W. LEES TEMPLETON.

Regional Medical Officer

SIR,—I have been trying in vain to obtain help in my practice for many months, so you can imagine that it is with disgust and despair for the future of the G.P. that I note the return to duty of that superfluous individual—the R.M.O. Has the B.M.A. made any protest against this glaring misuse of medical man-power?—I am, etc.,

Bristol. D. KIPPAX.

Medical Benefit under Police Regulations

SIR,—This week I have come across a class of worker not covered by the National Health Insurance Act yet employed by the State. This man, a member of the local police force, is suffering from a duodenal ulcer, and, by virtue of his not being incapacitated for duty, is not entitled to medical benefit as approved by the police authorities. It is to be hoped that police regulations will be corrected in the near future.—I am, etc.,

Dunstable. J. KELSALL THOMAS.

Health Centres and the Scientific Method

SIR,—If ever one was justified in making use of the platitude "It all depends on what you mean" it is surely when discussing health centres. With the help of a mathematician I attempted to calculate the various types of health centres which could be established, depending on the scope, technique of staff, equipment, etc. Taking only reasonable probabilities into account, there are over a thousand different varieties, and significant difference of data might be looked for from each institution.

With the modern development of specialization there have grown up two schools of thought amongst practitioners: "How can I make use of my hospital training in the treatment of this patient?" and the other: "What is the best that can be done for this patient?" The cynic calls the one school "mercenary" because he "hangs on to his patient," and the other "lazy" because he "always tries to send his patients into hospital." I belong to the latter. As there are these two schools of thought and as there can be all these varieties of institutions, it is necessary to make a careful study of the White Paper and the Goodenough report to discover what is in the mind of the Ministry and what function the general practitioner is expected to fulfil in the new scheme.

The White Paper (p. 57) expresses the need for a new attitude in patient and doctor. That, I assume, means prevention rather than cure. In my article (*Supplement*, Jan. 6, p. 1) I showed that for major disabilities the distance of the patient from the consulting-room of his panel doctor does not affect medical statistics, but that for minor disabilities it does. Whether a doctor happens to be a single practitioner or one of a group does not affect this rule, but as the grouping of doctors in health centres must increase the average distance which patients have to travel so the total number of maladies seen by the doctors will fall.

So far as individual illnesses are concerned this may be unimportant: the major illnesses are seen and the minor recover without medical attention. But social medicine is certainly affected. Might I give a simple example? Dr. Percy Stocks estimated that during the 1943 epidemic about 24% of the population aged 16 to 65 "suffered an illness regarded by them as influenzal." Assuming the accuracy of this statement, I found that in the small circle within five minutes' walk of my surgery 90% of the patients were seen. So that to all intents and purposes if the service is convenient respiratory complaints can be seen in all their variations. Now, whether or not influenza and colds are separate entities, influenza epidemics are heralded by a sudden astonishing increase in the incidence of colds.

If these respiratory complaints during an epidemic period are inherently associated and are signs of a social illness, then surely the greatest opportunity to study the warning symptoms and what leads to them should be the aim of a Ministry of Health. These first symptoms are so trifling that the doctors must be handy if the people are to take the trouble to consult them. The doctors will be handier scattered in single practices than congregated in health centres. Therefore, from the point of view of preventive medicine, health centres will suffer from a serious inherent functional defect.—I am, etc.,

Halifax. A. GARVIE.

Injustice to Physiotherapists

SIR,—Will you allow me to draw the attention of the profession to an apparent injustice being done to the members of one of our medical auxiliary services. My daughter, a fully qualified chartered physiotherapist, has now, following qualification and one year's civilian hospital experience, been for three years a physiotherapist in the R.A.F. At the time of joining she was officially informed that she could not work in an R.A.F. hospital except by joining the W.A.A.F., so she and friends of similar experience did so, and on being posted to an R.A.F. hospital were given the rank of Sergeant.

Now, after three years, these physiotherapists are still N.C.O.s, apart from a very few who have been granted commissions as heads of R.A.F. departments. Meanwhile, however, times have changed, and it appears that the R.A.F. is employing civilian physiotherapists, very often to work in the same department as the W.A.A.F.s. These civilians are given officer status, they live in officers' billets, and are in every way better treated than the W.A.A.F. physiotherapists, although most of them have had much less experience, being in some cases just newly qualified.

The solution for this anomalous state of affairs, which, I understand, is causing much dissatisfaction, would appear to be that the W.A.A.F. physiotherapists should now be released from the Service on the condition that they return to an R.A.F. hospital as civilians. They would then receive their proper status, their length of service with the R.A.F. being also taken into account, and the anomaly of their working with others of less experience but higher rank would thus be obviated.—I am, etc.,

North Queensferry. A. J. BROCK.

Unemployed Doctors in Britain

SIR,—A friend just forwarded to me Prof. J. A. Ryle's timely letter on unemployed doctors (*Supplement*, July 28, p. 17). I would like to inform Prof. Ryle of some more cases similar to those mentioned in his letter. Several refugee doctors—about 60 to 80 so far as I know—are serving as M.O.s in H.M. Forces. A return to their country of origin can hardly be considered for obvious reasons, while no preparations for emigration to other countries can be made by them owing to their present Service obligations, as well as to the uncertainty of their release dates. Most of them are on the temporary part of the *Register* only and will therefore be unable to practise medicine in England once the Emergency Powers Act has been repealed.

While on leave in London some two months ago I was informed that these cases were too few to justify an exception being made, and that it was not contemplated to grant any special facilities to ex-M.O.s to acquire a British degree. The difficulties of this side of the question have already been mentioned in Prof. Ryle's letter. It is also quite possible that the temporary registration will cease shortly after the demobilization of these M.O.s, so that they will be unable to avail themselves of the professional rehabilitation scheme open to all other M.O.s, or, to accept hospital positions in order to get once more in touch with modern medicine.

The official policy of facilitating the return of ex-Service men to civilian life does not seem to apply to these M.O.s at the moment.—I am, etc.,

"CAPTAIN, B.L.A."

Reference of Patients to Tuberculosis Officer

SIR,—Will you allow me a little space to refer to the paragraph headed "Reference of Patients to Tuberculosis Officer" in the Proceedings of Council published in the *Supplement* of Aug. 11 (p. 39). I am sure everybody will support the strongest possible opposition to the circular suggesting that the Divisional Medical Officer should send a patient referred to him for opinion direct to the tuberculosis officer. But I must disagree entirely with the sentence which begins "Only if . . ." This can only mean that the D.M.O. will be empowered to say to the practitioner, "I suggest you refer this man to the tuberculosis officer. If you don't it will be done for and in spite of you." I quite admit that a sensible man will for his own protection send the patient to the T.O., even if he is strongly of opinion that it is not necessary, but I do resent the element of compulsion which is to be brought to bear and to which Dr. Gregg would appear to assent. In my humble view this is an example and a warning of what we may expect on a much greater scale if we allow ourselves to be dragooned into a State service under a Socialist Government.—I am, etc.,

Middlesbrough. G. H. LOWE.

Country Panel Practice

SIR,—I hope that the future of the medical profession is never to depend upon the ability of "the public" to read notices or directions printed upon a "form." Unless the panel patient of the past and present really requires the doctor's service, the average time of presenting his card may be anything up to six years. The law of average may be comforting, but the number of "floating" patients is not.

There is another curse to the country doctor just now. For a matter of 7s. 3d. we have convalescent or temporary patients foisted upon us who may require *one* to *forty* visits and perhaps the supply of expensive drugs all the time. Personally, I am getting tired of the muddling methods which merely cost me money and effort, as I have plenty to do without these "gifts." One unfortunate man, who left town without informing his doctor, was incurable, did not wish to die here, and, all for a whim, cost me about £15; and his family rather double that amount.—I am, etc.,

Coldingham. F. O. TAYLOR.

H.M. Forces Appointments

ROYAL NAVY

Surg. Capt. H. E. Y. White, C.V.O., O.B.E., to be Surg. Rear-Admiral.

Acting Surg. Lieut.-Cmdr. L. G. Topham to be Surg. Lieut.-Cmdr.

Surg. Lieuts. P. S. Fuller, D. J. O'Donoghue, and R. T. Smith to be Surg. Lieut.-Cmdrs.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

War Subs. Major G. A. Kane, T.D., to be Major.

War Subs. Capt. E. E. Evans to be Capt.

Capt. W. A. Bellamy has relinquished his commission on account of disability, and has been granted the honorary rank of Major.

War Subs. Capt. J. R. Milligan has relinquished his commission on account of disability, and has been granted the honorary rank of Capt.

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

War Subs. Capt. J. Collins has relinquished his commission on account of disability, and has been granted the honorary rank of Capt.

To be Lieuts.: J. E. P. G. Godenne, J. Gorman.

WOMEN'S FORCES

EMPLOYED WITH THE R.A.M.C.

War Subs. Capt. E. M. Henderson has relinquished her commission on account of disability.

ROYAL AIR FORCE

Group Capt. (Temp. Air Vice-Marshal) A. F. Rook, O.B.E., to be Air Cdre.

ROYAL AIR FORCE VOLUNTEER RESERVE

Fl. Lieut. T. L. P. Harries has relinquished his commission on account of medical unfitness for Air Force service, and retains the rank of Squad. Ldr.

Flying Officer R. H. C. Conyngham has relinquished his commission on account of medical unfitness for Air Force service, and retains his rank.

RESERVE OF AIR FORCE OFFICERS

Fl. Lieut. (Temp. Squad. Ldr.) W. J. Fowler has relinquished his commission on account of medical unfitness for Air Force service, and retains the rank of Squad. Ldr.

INDIAN MEDICAL SERVICE

Capts. B. H. Sayed, R. J. Henderson, C. W. A. Searle, and L. M. Kelly to be Majors.

EMERGENCY COMMISSIONS

Capts. G. A. Flann and K. J. L. Scott to be Majors.

COLONIAL MEDICAL SERVICE

The following appointments are announced: Margaret D. Miller, M.B., Ch.B., Medical Officer, Tanganyika Territory; H. A. Munro, L.R.C.P. & S.Ed., Medical Officer, St. Vincent, B.W.I.

B.M.A. LIBRARY

The following books were added to the Library during March and April, 1945:

Andrews, H. R., and Lack, V.: Midwifery for Nurses. Ninth edition. 1945.
Barker, F. A.: Modern Prison System of India. 1944.
Bierman, W.: Physical Medicine in General Practice. 1944
Brady, M. Y.: Having a Baby Easily. 1944.
Cluver, E. H.: Public Health in South Africa. Fourth edition. 1944.
Dobbin, L., and Mackenzie, J. E.: Salts and their Reactions. Seventh edition. 1944.
Duffy, B. J.: Food for Thought. 1944.
Evans, B.: The Psychiatry of Robert Burton. 1944.
Fisher, R. A.: Statistical Methods for Research Workers. Ninth edition. 1944.
Giles, G. H.: Practice of Orthoptics. 1943.
Gration, H. M.: Practice of Nursing. 1944.
Gruneberg, H.: Genetics of the Mouse. 1943.
Grundy, F.: A Handbook of Social Medicine. 1945.
Hartwell, D.: Dogs Against Darkness. 1944.
Herms, W. B., and Gray, H. F.: Mosquito Control. Second edition, revised. 1944.
Hill, D. W.: The Impact and Value of Science. 1944.
Horsley, J. S.: Narco-Analysis. 1943.
Houghton, M., and Harding, M.: Aids to Theatre Technique. 1944.
Jensen, F., and Weiskotten, H. G.: Medical Care of Discharged Hospital Patient. 1944.
Kudo, R. R.: Manual of Human Protozoa. 1944.
Linton, R. G., and Williamson, G.: Animal Nutrition and Veterinary Dietetics. 1943.
Loeb, L.: Biological Basis of Individuality. 1945.
Lowy, S.: Man and His Fellowmen. 1944.
Lyons, Sir Henry: The Royal Society, 1660-1940. 1944.
McCleary, G. F.: Race Suicide? 1945.
Myerson, M. C.: Tuberculosis of Ear, Nose and Throat. 1944.

B.M.A.: Branch and Division Meetings to be Held

WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—At Clayton Hospital, Sunday, Sept. 9, 11 a.m. Postgraduate Lecture by Dr. Leslie Watson: The Criteria for the Diagnosis of Organic Heart Disease: Neuro-circulatory Asthenia.

POSTGRADUATE NEWS

The Fellowship of Medicine announces the following courses: (1) Revision course in anaesthetics at Royal Cancer Hospital, Fulham Road, S.W., Oct. 8 to 20, with lectures and/or demonstrations daily. (2) All-day course in children's diseases at Princess Louise Hospital, Kensington, Sat. and Sun., Sept. 29 and 30. (3) All-day course in rheumatism at Rheumatic Unit, St. Stephen's Hospital, Fulham Road, S.W., Sat. and Sun., Oct. 20 and 21.

WEEKLY POSTGRADUATE DIARY

FELLOWSHIP OF MEDICINE, 1, Wimpole Street, W.—*Royal Cancer Hospital*, S.W.: Mon., Tues., and Wed., 6 p.m. to 8.15 p.m., Primary F.R.C.S. course. *West End Hospital for Nervous Diseases*, Welbeck Street, W.: Mon., Tues., and Fri., 2.30 p.m., M.R.C.P. course in neurology.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTH

WILSON.—On July 30, 1945, at Alexandria, Dr. Barbara E. Wilson (*née* Clapham), wife of Dr. J. V. Wilson, M.R.C.P., a son.

ENGAGEMENT

HARGREAVES—THOMPSON.—The engagement is announced between John E. Hargreaves, Surgeon, Merchant Navy, only son of the late Dr. Robert Hargreaves and Mrs. Hargreaves, 30, Stumperlowe Hall Road, Sheffield, and Merle Elisabeth, eldest daughter of Mr. and Mrs. Hugh A. Thompson, Hastings, New Zealand.

MARRIAGES

GILLINGHAM—JUDE.—On Aug. 30, 1945, at Oxford, Francis John Gillingham, Major, R.A.M.C., to Irene Jude.

SHAW—HART.—On Aug. 17, 1945, at North Walsham, Norfolk, Capt. Richard Emmott Shaw, to Jean Hart, of North Walsham.

DEATHS

BARROWMAN.—On July 23, 1945, in India, Hamish Barrowman, M.B., Ch.B., D.P.H., Major, R.A.M.C., beloved husband of Margaret I. Yuille, 5, Marywood Square, Gasgow, S.1.

BROWN.—On Aug. 16, 1945, Alexander Brown-M.B.Lond., of Bartholomew Road, N.W.5.

O'SULLIVAN.—On Aug. 8, 1945, Kingsley Louis, L.R.C.P.&S.I., L.M.R., Major, R.A.M.C. (ret.), darling husband of Maisie, Coleford House, Coleford, Nr. Bath, Somerset.

WILSON.—On Aug. 24, 1945, at Shirley, Knaresborough, Janet Mary, dearly loved wife of Stanley P. Wilson and mother of Mary and Anne, aged 45.

THE LONDON HOMOEOPATHIC HOSPITAL

(Incorporated by Royal Charter)

GREAT ORMOND STREET AND QUEEN SQUARE, W.C.1

Courses of Lectures on Homoeopathy for Postgraduates and Medical Practitioners

AUTUMN AND WINTER SESSION 1945-46

HONYMAN-GILLESPIE LECTURESHIP

Thirty-seventh Year

These lectures are intended to cover subjects required for examination for the Diploma of Membership of Faculty of Homoeopathy.

A Course of Lectures on

HOMOEOPATHIC MATERIA MEDICA AND THERAPEUTICS

Accompanied with Clinical Demonstrations

will be given at the Hospital by CHARLES E WHEELER, M.D., B.S., B.Sc.Lond., F.F.Hom., Consulting Physician to the London Homoeopathic Hospital, Mondays and Thursdays, October, 1945, to March, 1946, commencing Monday, October 15, at 1.30 p.m.; and ARTHUR D. C. MACGOWAN, M.B., Ch.B.Glasg., F.F.Hom., Physician to the London Homoeopathic Hospital on Fridays, January to March, 1946, commencing January 4, at 2.30.

A course of Lectures will also be given under the auspices of the Honyman-Gillespie Trust at the GLASGOW HOMOEOPATHIC HOSPITAL, January to March, 1946, further particulars of which can be obtained from G. LITHGOW WILSON, M.B., Ch.B.(Glas.), M.F.Hom., 6, Belgrave Terrace, Great Western Road, Glasgow, W.2.

THE COMPTON-BURNETT LECTURES

A Course of Ten Lectures on

HOMOEOPATHIC PHILOSOPHY AND PRESCRIBING

will be given by Sir JOHN WEIR, G.C.V.O., M.B., Ch.B.Glasg., F.F.Hom., Physician to His Majesty the King, Physician in Ordinary to H.M. Queen Mary, Consulting Physician to the London Homoeopathic Hospital, at the Winter Session only, on Fridays, at 2.30 p.m., October to December, commencing October 12.

TUTORIAL CLASS

A course of Ten Lectures on the Study of the Repertory will be given by AGNES MONCRIEFF, M.B., Ch.B.Glasg., F.F.Hom., Assistant Physician for Diseases of Children to the London Homoeopathic Hospital, Fridays, at 3.30 p.m., October to December, commencing October 12.

CLINICAL TUTORIALS

On Monday and Thursday afternoons at 2 o'clock throughout the year the Medical Tutors to the Hospital, J. DOUGLAS KENYON, M.B., Ch.B., B.Sc. (Vict.), M.F.Hom.; WILLIAM L. TEMPLETON, M.D., Ch.B.(Glas.), F.F.Hom., conduct an Out-patient Clinic for the purpose of instruction in the application of Homoeopathic principles.

THE SIR HENRY TYLER SCHOLARSHIP COMMITTEE

offer Scholarships to Medical Men in the Provinces desirous of taking a Postgraduate Course at the London Homoeopathic Hospital during the Ten Compton-Burnett Lectures. Prospectus and further information regarding Scholarships may be obtained on application to the Secretary, London Homoeopathic Hospital, W.C.1.

CORRESPONDENCE COURSE

For the benefit of Doctors unable to attend the Postgraduate Lectures a Postgraduate Correspondence Course has been inaugurated under the auspices of the British Homoeopathic Association. For particulars apply to the Secretary, British Homoeopathic Association, 43, Russell Square, London, W.C.1.

THE INSTITUTE OF LARYNGOLOGY AND OTOLOGY

330/332, Gray's Inn Road, London, W.C.1

in association with

THE ROYAL NATIONAL THROAT, NOSE AND EAR HOSPITAL

(Golden Square, W.1, and Gray's Inn Road, W.C.1)

FOUR WEEKS' COURSE IN LARYNGOLOGY, RHINOLOGY, AND OTOLOGY (29th October to 30th November, 1945), for senior post-graduate students—especially those taking Part II of the D.L.O. Examination. Full syllabus from the Secretary. Fee £15 15s.

DEMONSTRATION AND DISCUSSION OF CLINICAL CASES on Friday afternoons, open to all medical practitioners without fee; list of dates from the Secretary.

CLINICAL ASSISTANTSHIPS AND OUT-PATIENT ASSISTANTSHIPS are available at both Gray's Inn Road and Golden Square Hospitals.

These appointments offer valuable opportunities to general practitioners and senior post-graduates of acquiring an extended clinical knowledge of the speciality. Further particulars may be obtained from the Secretary.

THE QUEEN'S UNIVERSITY OF BELFAST

FACULTY OF MEDICINE SESSION 1945-46

Vice-Chancellor: D. LINDSAY KEIR, M.A.

Dean: Professor W. J. WILSON

Anatomy: T. Walmsley, M.D., F.R.S.E. *Operative Surgery and Applied Anatomy:* H. P. Malcolm, M.B., M.Ch. *Physiology:* H. Barcroft, M.A., M.D. *Medicine:* W. W. D. Thomson, M.D., B.Sc., F.R.C.P.(Lond.). *Surgery:* P. T. Crymble, M.B., F.R.C.S.(Eng.). *Materia Medica and Therapeutics:* J. T, Lewis, M.D., B.Sc., F.R.C.P.(Lond.). *Midwifery and Gynaecology:* C. G. Lowry, M.D., F.R.C.S.I. *Pathology:* J. H. Biggart, M.D., D.Sc. *Medical Jurisprudence:* J. H. Biggart, M.D., D.Sc. *Ophthalmology and Otology:* J. R. Wheeler, M.B., F.R.C.S.(Edin.). *Public Health Administration:* C. S. Thompson, M.D., D.P.H. *Public Health:* W. J. Wilson, B.A., D.Sc., M.D., D.P.H. *Physics:* K. G. Emeleus, M.A., Ph.D.; R. H. Sloane, D.Sc. *Zoology:* T. T. Flynn, D.Sc.; G. Williams, M.Sc. *Botany:* James Small, D.Sc.; Mary J. Lynn, D.Sc. *Chemistry:* A. W. Stewart, D.Sc. *Biochemistry:* D. C. Harrison, D.Sc., Ph.D. *Organic Chemistry:* H. Graham, D.Sc. *Vaccination:* S. R. Armstrong, M.D. *Bacteriology:* N. C. Graham, M.B. *Psychological Medicine:* Dorothy Gardner, M.B., D.P.H. D.P.M. *Infant Hygiene and Diseases of Children:* F. M. B. Allen, M.D., F.R.C.P.(Lond.).

The Lectures of Winter Session 1945-46 will commence on Tuesday, October 2. The Fees for a complete Medical Course (including Hospital Fees) amount to about £250. Scholarships will be open for competition at the Winter and Summer Professional Examinations. The Entrance Scholarship Examinations are held in June of each year.

RIDDEL HALL, situated a short distance from the University, offers residence for women students Full particulars can be obtained from the Warden, Riddel Hall, Stranmillis, Belfast.

HOSPITALS RECOGNISED FOR CLINICAL INSTRUCTION

Royal Victoria Hospital, Mater Infirmorum Hospital, Belfast Union Infirmary, City Fever Hospitals, Purdysburn, and Union Fever Hospital, Royal Maternity Hospital, Belfast Hospital for Sick Children, Ulster Hospital for Diseases of Children and Women, Belfast Ophthalmic Hospital and Eye and Ear Dispensary, Benn Ulster Eye, Ear and Throat Hospital, Samaritan Hospital, Forster Green Hospital for Diseases of the Chest, Belfast Hospital for Diseases of the Skin, Belfast Mental Hospital.

The Calendar, containing full information regarding the new Regulations for Courses, Fees, Scholarships, etc., can be had on application to the Bursar, Queen's University, Belfast, price 3s., postage 6d. extra.

RICHARD H. HUNTER, M.D., M.Ch., Ph.D.,
Secretary.

THE MIDDLESEX HOSPITAL MEDICAL SCHOOL

(UNIVERSITY OF LONDON.)

The Hospital and Medical School are fully equipped for teaching the entire medical curriculum, including instruction in Maternity Wards and all Special Departments.

SCHOLARSHIPS AND PRIZES

Two ENTRANCE SCHOLARSHIPS, value £100 each, and Four UNIVERSITY SCHOLARSHIPS, value £100 each, are awarded annually. In addition numerous Prizes are also awarded each year and exceed £1,000 in value.

The Tutors assist all Students, especially those who are preparing for Examinations, without extra fee.

Special attention is given to Students studying for Higher Degrees and Diplomas.

Common Rooms, a Gymnasium, and a Restaurant are provided in the School Buildings. A Squash Racquets Court is available in the Hospital.

Athletic Ground: Chislehurst, Kent.

The Students' Amalgamated Clubs include Rugby and Association Football, Golf, Cricket, Hockey, Sailing, Fencing, etc., etc.

SESSIONS 1945-46

Classes begin on October 1. Clinical Appointments are made every three months, beginning on November 1, and are held at the Middlesex Hospital, and at the Sector Hospitals at Aylesbury, Mount Vernon Hospital, Northwood, and Central Middlesex Hospital, Acton Lane, London.

Further particulars, Scholarship Regulations, and detailed Prospectus may be obtained on application to R. A. FOLEY, F.C.C.S., School Secretary, Middlesex Hospital, W.1.

H. E. A. BOLDERO, M.A., D.M., F.R.C.P.,
Dean of the Medical School.

THE WINTER SESSION COMMENCES
TUESDAY, OCTOBER 2, 1945

This Hospital and School, situated in the centre of a large population, and within a few minutes of University College Hospital, is admirably adapted for the teaching of students in every branch of the Science and Art of Dental Surgery. The mechanical laboratory, conservation room, and X-ray departments are replete with all the latest approved appliances.

Students (men and women) enter as students of University College Hospital, and attend classes in anatomy and physiology at University College Hospital Medical School.

Each student serves as a dresser in the extraction, anaesthetic, conservation and X-ray departments, which provides him with the opportunity of observing and actually carrying out the methods of work in all branches.

Four House Surgeons are appointed half-yearly.

The Calendar, containing full information as to lectures, fees, prizes, etc., may be had on application to the Sub-Dean of Dental Students, who attends the University College Hospital Medical School, University Street, Gower Street, W.C.1, on Fridays at 11 a.m.

UNIVERSITY OF EDINBURGH

FACULTY OF MEDICINE

The University grants the Degrees of Bachelor of Medicine and Bachelor of Surgery (M.B., Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.).

Opportunities for Hospital Practice are afforded in Hospitals in the City, and upwards of 3,800 beds are available for Clinical Instruction of Students of the University.

The approximate cost of the course, extending over five years, for the Degrees of M.B., Ch.B., is £275. Prospective students are normally required to make application for admission on a prescribed form not later than July 1 of the year in which they wish to enter, but men students who will reach the age of 18 years and women students who will reach the age of 19 years between January 1 and August 31 of the year in which they wish to begin the course should apply by the middle of December of the previous year.

The University also grants a Diploma in Medical Radiology, and a full course of instruction for the Diploma is provided.

In the various Departments of the Faculty of Medicine provision is made for research by students of graduate standing.

A copy of the Faculty Programme may be obtained from the Dean of the Faculty of Medicine, University, Edinburgh, 8. Programmes regarding Degrees in other Faculties may be obtained from the Matriculation Office, University, South Bridge, Edinburgh 8.

W. A FLEMING, Secretary to the University.

INCORPORATED 1505

ROYAL COLLEGE OF SURGEONS OF EDINBURGH

COPIES OF REGULATIONS for the Fellowship, Licence, Higher Dental Diploma, and Licence in Dental Surgery, containing Dates of Examinations, may be had on application to

Surgeon's Hall,
18, Nicholson Street,

THE WINTER SESSION
WILL COMMENCE ON TUESDAY,
OCTOBER 2, 1945

The School is for Final Students only. Students are prepared for the degrees of the Universities of—Oxford, Cambridge, London, and Durham, and for the Diplomas of other qualifying bodies.

FEES. The fees for the complete Clinical Course are £135 9s. 0d. Oxford or Cambridge Students who have completed their Course in Pathology, £120 9s. 0d. The fees are payable, if desired, in three annual instalments of £45 3s. 0d. or £40 3s. 0d. respectively. There are no extras as the fees include: (1) Courses of instruction in Pharmacy, Vaccination, and Fevers; (2) Life Subscription to the Medical Society; (3) Subscription to the U.C.H. Magazine.

SCHOLARSHIPS, EXHIBITIONS and Prizes (value over £1,000) are awarded annually. Among the most important are:

I. Goldsmid Entrance Scholarships, entitling the holder to the Final Course of Medical Study, are offered for competition annually in July, and are open to Students who are preparing for the Degrees of the Universities of London, Oxford, Cambridge, Durham, or other British Universities, or for the Diplomas of the Royal Colleges of Physicians and Surgeons.

II. Goldsmid Entrance Exhibition (value £80), entitling the holder to a reduction by £80 of the fees due for the Full Course of Final Medical Study.

III. Filliter Entrance Scholarship in Pathology (value £52 10s.), entitling the holder to a reduction by £52 10s. of the fees due for the Full Course of Final Medical Study.

Candidates will be examined in any two of the following subjects: Anatomy, Physiology, General Pathology, and Biochemistry. Candidates need take the examination in Pathology alone if they desire to enter only for the Filliter Entrance Scholarship in Pathology.

All further information and Prospectus can be obtained from the Secretary, and the Dean can be interviewed at any time by appointment.

Dean: S. Cochrane Shanks, M.D., F.R.C.P., F.F.R.

Vice-Dean: Prof. S. J. Cowell, M.B., F.R.C.P.

Sub-Dean for Dental Students: Alan Shefford, O.B.E., L.D.S.R.C.S.Eng.

Secretary: R. Slolfy.

ROYAL COLLEGE OF PHYSICIANS OF EDINBURGH

The EXAMINATIONS for the LICENCE of the College (as a single qualification) for the ensuing year will be held on the *First Wednesday* and the following days of every month (except September and October).

Candidates must be registered medical practitioners. Applications must be lodged with the Secretary one week before the date of the examination at which they propose to appear.

The EXAMINATIONS for the MEMBERSHIP of the College are held *quarterly during the second week of January, April, July* and *October.*

Candidates for the MEMBERSHIP must submit their applications and testimonials to the Secretary one month before the date at which they wish to appear for Examination.

For the Regulations in regard to the various qualifications granted by the College and all other information, application may be made to the Secretary.

LONDON (ROYAL FREE HOSPITAL) SCHOOL OF MEDICINE FOR WOMEN

(University of London)
Hunter St., Brunswick Square, London, W.C.1.
ELIZABETH BOLTON, C.B.E., M.D., B.S., Dean

FULL COURSES are arranged for the London M.B., B.S. Degrees, and certain Examinations of other qualifying bodies.

The CLINICAL COURSE is pursued at the Royal Free Hospital, and at present at its Emergency Medical Service Base Hospital, Arlesey, Beds, with additional experience at some special hospitals.

Appointments at the Hospital and Medical School are open to Students after qualification.

Scholarships, Bursaries and Prizes of the value of £2,000 are awarded annually.

The SESSION begins on OCTOBER 1, each year

Application for admission on the prescribed form must be made before January 1 for the following October.

The Prospectus and full information can be obtained from the Warden and Secretary.

WESTMINSTER HOSPITAL MEDICAL SCHOOL

(UNIVERSITY OF LONDON)

The new and enlarged School was completed in May 1939, in order to meet the demands of the latest developments in medical education. The buildings offer all the facilities required by the student for his social life, and the lecture theatres, class rooms, and laboratories are specially designed for his instruction.

SCHOLARSHIPS.—The David de Souza Scholarship to the value of £25 per annum is awarded on the results of an examination in Applied Physiology held in September. Four Scholarships to the value of £75 each are awarded on the result of an examination held in May of each year in First Year Subjects. Four Scholarships are also awarded annually as the result of examinations in Anatomy and Physiology in April and September.

FEES.—Entrance fee, 13 guineas (for those taking Clinical studies only, 8 guineas). Annual fee, 44 guineas, which includes membership to the Sports Union Club with its various branches—football, cricket, tennis, hockey, swimming, fencing, boxing, sailing, squash rackets, rowing, and Guthrie Society. The Sports Ground is within 20 minutes of the Hospital.

RESIDENT APPOINTMENTS.—Paid appointments as Medical, Surgical, and Obstetric Registrars, Casualty Officers, House Physicians, House Surgeons, and Anaesthetist are available for Students upon qualification. There are excellent opportunities for research work in the endowed Carlill Laboratories. The number of students is strictly limited to ensure the maximum advantages of individual clinical teaching and to afford the large majority of those who qualify the opportunity to secure one of these very valuable appointments.

The Dean or Sub-Dean will be pleased to arrange for intending Students and Parents to inspect the Hospital and Medical School at any time.

Only male students are admitted.

A Prospectus and full particulars may be obtained on application to the Dean—G. H. MacNab, M.B., Ch.B., F.R.C.S., Westminster Hospital Medical School, Horseferry Road, Westminster, London, S.W.1. *Telephone:* VICtoria 6041-2.

KING'S COLLEGE HOSPITAL MEDICAL SCHOOL

(UNIVERSITY OF LONDON)

Dean: JOHN B. HUNTER, *M.C.*, M.Ch., F.R.C.S.

THE NEW MEDICAL SCHOOL contains Lecture Rooms, Lecture Hall, Museum, Research Rooms and Laboratories, Bio-Chemical Research Laboratory, Common Rooms, and Refectory. Two Squash Rackets Courts adjoin the School.

FOURTEEN ENTRANCE SCHOLARSHIPS, total value £1,530, are awarded annually.

RESIDENT HOSPITAL APPOINTMENTS, numbering forty-one, are made during each year.

ATHLETIC GROUND. The Athletic Ground of the Medical School is within ten minutes' walk of the Hospital, and has accommodation for cricket, football, hockey, and lawn tennis.

SCHOOL HOSTEL. "The Platanes," standing in large grounds, with three lawn tennis courts, provides residence for 80 students, and is within five minutes' walk of the Hospital.

The Dental School provides full Courses in preparation for Dental Degrees and Diplomas.

For Particulars, Calendar of the School, and Appointments to see the School and Hospital, application should be made to the Secretary, S. C. RANNER, M.A., King's College Hospital Medical School, Denmark Hill, London, S.E.5.

THE ROYAL DENTAL HOSPITAL OF LONDON

SCHOOL OF DENTAL SURGERY

(University of London), Leicester Square, London, W.C.2.

Men and Women Students are admitted for the Curriculum for the B.D.S. Degree and the L.D.S. Diploma in October, January, and May.

HOSPITAL PRACTICE.—The school is furnished with modern equipment, and the Clinic of the Hospital is unrivalled. Students may attend the operations in the In-patient Department, and chair-side instruction is given in Advanced Operative Technique and Orthodontics.

DENTAL PROSTHETICS.—The Mechanical Laboratory is a spacious and fully equipped department under the direction of the Lecturer in Prosthetics.

HOUSE APPOINTMENTS—Six Senior House Surgeons and fifteen ordinary House Surgeons are appointed every year.

SCHOLARSHIPS.—A number of Scholarships, Bursaries, and Prizes are awarded annually, including an open Entrance Scholarship of £50.

Applications for further particulars and School Calendar are invited by THE DEAN.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE

UNIVERSITY OF LONDON

WINTER SESSION BEGINS OCTOBER 1, 1945

WAR-TIME ARRANGEMENTS

All the pre-clinical Departments of the College are now temporarily established at Cambridge, where full courses have been arranged to meet the requirements of the Regulations of the University of London, and are carried out by St. Bartholomew's teachers.

The clinical work of the senior students continues to be based on St. Bartholomew's Hospital, but is also carried on in two large Hospitals in Sector III of the Emergency Medical Service, viz., at New Southgate and St. Albans, which provide a larger number of beds than normally. Adequate facilities for the teaching of Pathology and Midwifery have been arranged. All Out-Patient Departments at St. Bartholomew's are open.

Special arrangements are made for the housing of students.

A full Staff of clinical teachers is distributed over the Hospitals. Lecture courses are arranged in all Hospitals.

STUDENTS' UNION

The Union possesses a Club Ground of seventeen acres at Chislehurst, and athletic amenities are available in the newly-purchased site in Charterhouse Square, five minutes' walk from the Hospital.

HIGHER EXAMINATIONS

Special Classes are held for Primary F.R.C.S., etc.

For further particulars apply, personally or by letter, to The Dean of the Medical College, St. Bartholomew's Hospital, London, E.C.1.

UNIVERSITY OF LONDON

OPHTHALMIC HOSPITAL MEDICAL SCHOOL ROYAL LONDON OPHTHALMIC HOSPITAL (Moorfields Eye Hospital)

City Road, E.C.1

Qualified Medical Practitioners and Registered Medical Students may enter on the Practice of the Royal London Ophthalmic Hospital (Moorfields) at any time, and are, on certain conditions, eligible for appointment as Chief Clinical Assistant, Clinical Assistant, and Junior Assistant.

Courses of Instruction, extending over a period of five months, begin in October and March.

DIPLOMA IN OPHTHALMIC MEDICINE AND SURGERY AND OTHER DEGREES IN OPHTHALMOLOGY

A complete curriculum is specially designed to meet the requirements of candidates entering for these examinations.

Fees for the Practice of the Hospital: Perpetual, £5 5s. 0d.; three to six months, £3 3s. 0d.; two months, £2 2s. 0d.; one month, £1 1s. 0d.

Clinical work begins at 9 a.m. daily. Operations are performed between 10 a.m. and 1 p.m.

For further particulars apply to the Secretary to the Medical School at the Royal London Ophthalmic Hospital, City Road, E.C.1; or to the Dean, Robert Davenport, M.B., B.S., F.R.C.S.

ST. GEORGE'S HOSPITAL MEDICAL SCHOOL

(UNIVERSITY OF LONDON)
HYDE PARK CORNER, S.W.

The Hospital and Medical School occupy the finest site in London and are readily accessible from all parts of the Metropolis.

The entire teaching in the School is devoted to the subjects of the Final Examination; in other words, is specially adapted to the interests of men from the Universities who have passed their Examination in Anatomy and Physiology.

St. George's students attend at King's College for tuition in the Preliminary and Intermediate subjects.

SEVEN ENTRANCE SCHOLARSHIPS IN ANATOMY AND PHYSIOLOGY, AND GENERAL PATHOLOGY, of the value of £120, £80 (3), £60 (2) and £50 respectively, and MANY VALUABLE PRIZES ARE AWARDED EACH YEAR.

The ST. GEORGE'S HOSPITAL CLUB incorporates the RUGBY FOOTBALL, CRICKET, LAWN TENNIS, BOXING, RIFLE and other Clubs, and possesses an ATHLETIC GROUND within easy reach of the Hospital, and Smoking and Luncheon Rooms on the School Premises.

Annual Composition Fee, which covers all courses lectures, etc., in the Hospital and School, £42 Annual Club Subscription, £3 13s. 6d.

The Winter Session will begin on October 1, but students can enter at any time.

Further information may be obtained from the Dean of the Medical School.

H. W. GORDON, *M.C.*, B.Ch., F.R.C.P.
Dean.

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.

B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.

A—Whole-time resident house appointments open to practitioners without previous experience.

B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

HIS MAJESTY'S COLONIAL SERVICE. The Colonial Medical Service. Vacancies for MEDICAL OFFICERS. The maintenance of an efficient COLONIAL MEDICAL SERVICE constitutes a vital part of the national war effort, and it is most important that the Service should be assured of an adequate supply of doctors. The Secretary of State for the Colonies therefore invites applications from doctors possessing a medical qualification registrable in the United Kingdom who are British subjects and who are under 35 years of age. Medical Officers are appointed in the first instance for general service, but there are ample opportunities for work in special branches of medicine and surgery, in public health, and in medical research. The normal salary scale is from £600 to between £1,000 to £1,120. There are large numbers of super-scale posts to which promotion is made on merit and which carry higher salaries. Government quarters, in many cases free of rent, and first-class passages to and from the Colonies are provided, and an adequate pension scheme is in force. Selected candidates are normally required to attend a course of instruction in Tropical Medicine and Hygiene, either before or after proceeding overseas or during their first period of leave. Further particulars, including the regulation governing admission to the Colonial Medical Service, may be obtained from the *Director of Recruitment (Colonial Service)*, 2, Park Street, London, W.1.

AUCKLAND HOSPITAL BOARD, New Zealand.—Applications addressed to the undersigned and closing at noon on Monday, September 17, 1945, are invited from registered medical practitioners for two appointments as SENIOR RADIOLOGISTS at the Board's Institutions, at commencing salaries of £1,000 per annum, rising by two annual increments of £100 to £1,200 per annum, living out. (New Zealand currency.) Applicants must hold Diploma of Radiology. The appointments are whole-time and are for diagnostic radiology only. The Board's Institutions include: (1) The Auckland Hospital of 1,000 beds (with a Director of Radiology and an Assistant Radiologist already appointed). (2) The Green Lane Hospital of 600 beds, including a Chest Diseases Department. (3) The Middlemore Hospital of 300 beds, including an Orthopaedic Department. New *X*-ray Departments are being opened in the two latter hospitals this year. Conditions and memorandum of appointment may be obtained from the office of the High Commissioner for New Zealand, New Zealand House, the Strand, London, W.C.2. Applications should be endorsed "Senior Radiologist" and sent to New Zealand direct by air mail.—R. F. Galbraith, Secretary.

MUNICIPAL COUNCIL OF NAIROBI (Kenya Colony). ASSISTANT MEDICAL OFFICER OF HEALTH.—The Municipal Council of Nairobi in the Colony of Kenya invites applications from qualified and experienced persons for the post of Assistant Medical Officer of Health. Candidates must possess a diploma in Public Health. The salary attached to the post is £840 per annum, rising by annual increments of £40 to £920 per annum, but a candidate with special qualifications may be allowed to enter the scale at an appropriate point higher than the initial salary. After a probationary period of six months, the person appointed, if confirmed in the appointment, will be required to contribute 7½% of his salary to the Municipal Provident Fund, into which the Council will contribute a similar amount. The person appointed will be entitled to six months' oversea leave on full pay with passages paid after each period of four years' service. Eighteen days annual local leave is also granted. Applications, stating age, experience and qualifications and accompanied by a recent photograph, medical certificate, and certified copies (not originals) of testimonials, should be addressed to the undersigned.—W. W. Ridout, Town Clerk, Town Hall, Nairobi, Kenya Colony.

CITY OF PLYMOUTH, City General Hospital.—Applications are invited from duly qualified and registered medical practitioners, male and female, including practitioners within three months of qualification and liable under the National Service Acts, for the appointment of CASUALTY OFFICER AND ASSISTANT RESIDENT (A) in the Maternity and Gynaecological Department at the City General Hospital. The appointment will be for a period of six months, but terminable by one month's notice on either side at any time. Salary is at the rate of £250 per annum, plus war bonus, and full residential emoluments All fees received by the officer must be refunded to the Council. Further details may be obtained from the Medical Superintendent of the Hospital. Forms of application are not provided. Applications must be addressed to the undersigned as soon as possible—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

THE OTAGO HOSPITAL BOARD. University of Otago and Dunedin Hospital, New Zealand.—Applications are invited for the following positions, viz:

(A) FULL-TIME TUBERCULOSIS OFFICER, at a salary at the rate of £1,500 per annum (plus travelling allowance), plus £100 per annum payable by the Otago University Council for teaching duties.

(B) FULL-TIME PSYCHIATRIC PHYSICIAN, at a salary at the rate of £1,500 per annum (plus travelling allowance), plus £100 per annum payable by the Otago University Council for teaching duties.

Applications are also invited for the position of RESIDENT SURGICAL OFFICER (Senior). Candidates must hold a degree in Medicine of a British University, must have been qualified for three years, and have held reesident hospital appointments for at least one year. Preference given to unmarried applicants. The duties will be those of superintending house surgeons with, in addition, certain tutorial work under the direction of the Professor of Surgery. Salary to be at the rate of £600 (N.Z. currency) per annum, with board and residence.

Full details may be obtained on application to the High Commissioner's Office, New Zealand Govt., 415, Strand, London.—John Jacobs, Secretary, Otago Hospital Board, Dunedin.

PAPWORTH VILLAGE SETTLEMENT, Nr. Cambridge.—Applications are invited from registered medical practitioners for the appointment of a RESIDENT SURGICAL OFFICER (B1). Applicants should have held house appointments and had experience in tuberculosis and thoracic surgery. Preference will be given to candidates holding the Diploma of F.R.C.S. Suitably qualified R practitioners now holding B2 posts may apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The appointment is for one year in the first place, salary £600 p.a., rising to £800 p.a. by £100, with board, lodging, and laundry. Applications should be sent to the Medical Director, Papworth Village Settlement, Papworth Hall, Cambridge.

CITY AND COUNTY OF BRISTOL. Department of Public Health. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the appointment of Assistant Resident Medical Officer (B2), which is vacant now at Ham Green Hospital, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will be held for a period of one year. Salary £200 per annum, plus full residential emoluments. Application forms may be obtained from the undersigned, to whom they must be returned, accompanied by copies of not more than three recent testimonials, forthwith.—R. H. Parry, Medical Officer of Health, Kenwith Lodge, Westbury Park, Bristol, 6.

COUNTY BOROUGH OF BOLTON. Townleys Hospital, Farnworth. TEMPORARY ASSISTANT RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered male medical practitioners for the above appointment. Suitably qualified R practitioners holding B2 appointments, also R practitioners now holding B1 appointments and rejected by the R.A.M.C., may apply. An interest in obstetrics is desirable. The salary will be £350 per annum, plus bonus, with emoluments valued at £130 per annum. Applications must be made on a form which may be obtained from the Medical Officer of Health, Civic Centre, Bolton, accompanied by copies of two recent testimonials, and must reach the undersigned as soon as possible.—Philip S. Rennison, Town Clerk, Town Hall, Bolton.

COUNTY BOROUGH OF ROTHERHAM. Municipal General Hospital. RESIDENT ASSISTANT MEDICAL OFFICER (A).—Applications are invited from fully registered medical practitioners with the necessary knowledge and experience of hospital work, including practitioners within three months of qualification and who are liable for service under the National Service Acts, for the above appointment. The appointment will be for a period of six months. Salary is at the rate of £200 per annum, together with full residential emoluments and a temporary cost-of-living bonus in accordance with the Council's scale. Forms of application may be obtained from the Medical Superintendent, Municipal General Hospital, Moorgate, Rotherham, and must be returned to the undersigned endorsed "Assistant Medical Officer" not later than Sept. 12, 1945.—Charles Des Forges, Town Clerk, Municipal Offices, Rotherham.

CITY OF LEEDS. St. James's Hospital (1,296 beds).—LOCUM TENENS HOUSE PHYSICIAN required immediately for holiday duty (4 to 6 weeks). Fee £5 5s. per week, with full residence and board in addition. Apply Medical Officer of Health, Public Health Dept. (Hospitals Administration Section), 12, Market Buildings, Vicar Lane, Leeds, 1.

CITY OF MANCHESTER. Public Health Department. Crumpsall Hospital (1,400 beds). TEMPORARY VISITING CONSULTANT EAR, NOSE, AND THROAT SURGEON (PART-TIME).—The Public Health Committee invites applications for the above-mentioned appointment at the Crumpsall Hospital (adult, general), Manchester, 8, which will become vacant on October 12, 1945. It does not carry with it right of entry into the Corporation Superannuation Fund. The remuneration will be £250 per annum. Two normal sessions at the hospital will be required each week with emergency sessions in addition, as required. Forms of application and copies of a memorandum on the terms and conditions of the appointment may be obtained from the Medical Officer of Health, Hospitals Administration Section, G.P.O. Box 399, Town Hall, Manchester 2, by whom applications must be received not later than September 15, 1945. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF CARLISLE. City General and Fusehill Emergency Hospitals, Carlisle (100 civilian beds, 200 E.M.S. and reserve beds).—Applications are invited for the following appointment: RESIDENT MEDICAL OFFICER (B1), vacant September 1, for the care of civilian beds. The chief duties are in the Maternity and Gynaecological Wards, and the appointment offers excellent experience of abnormal midwifery. The person appointed will also have charge of some medical and surgical wards. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless rejected by R.A.M.C. Salary at the rate of £350 per annum, plus full residential emoluments. The appointment is for six months in the first instance. Applications should be sent to the Acting Medical Officer of Health, 22, Fisher Street, Carlisle, as early as possible.

CITY OF PLYMOUTH. Mount Gold Orthopaedic and Tuberculosis Hospital (200 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ASSISTANT RESIDENT SURGICAL OFFICER (B2) at Mount Gold Hospital. Salary is at the rate of £250 per annum, plus war bonus, with full residential emoluments. All other fees received by the officer must be refunded to the Council. Married quarters are not provided. Preference will be given to applicants who have had some experience of orthopaedic and fracture work. The duties are mainly in the orthopaedic and E.M.S. sections of the Hospital, but may include some duties in the pulmonary tuberculosis wards. R and W practitioners who now hold A posts may apply, when the appointment will be limited to six months, otherwise it will be renewable for a further period of six months, terminable by one month's notice on either side at any time. Applications should be sent as soon as possible to T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF LEEDS. Public Health Department. St. Mary's Infirmary. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male, for the post of Resident Medical Officer (B2) for the above hospital, including R practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of twelve months. Preference will be given to candidates who have held an A post in a maternity hospital. The salary is at the rate of £250 per annum, plus a cost-of-living bonus, together with full residential emoluments. The hospital comprises a maternity unit of 98 beds and 102 beds for chronic sick. It is a Part 1 Training School under the regulations of the C.M.B., and the duties of the officer will include instruction of pupil midwives. All fees received by the officer must be paid into City funds. Applications, endorsed "R.M.O.," to be forwarded to the undersigned.—J. Johnstone Jervis, Medical Officer of Health, Public Health Department (Hospitals Administration Section), 12, Market Buildings, Leeds, 1.

COUNTY BOROUGH OF DERBY. Derby City Hospital. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the appointment of Resident Medical Officer (B2); including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it may be extended to twelve months. The salary is at the rate of £200 per annum, with full residential emoluments, plus war bonus. The hospital is a 1A Casualty Hospital with a normal complement of 312 beds, plus casualty beds for acute medical and surgical cases, and with a large obstetrical department. Applications should be sent to the Medical Superintendent, City Hospital, Derby, as early as possible.—C. Ashton, Town Clerk, Town Hall, Derby

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 11

AMENDED ADVERTISEMENT

BOROUGH OF WIMBLEDON. TEMPORARY ASSISTANT MEDICAL OFFICER.—Applications are invited from suitably qualified persons, men or women, for the above appointment. Candidates already holding a whole-time Public Health appointment under a local authority are not eligible. The successful candidate will also be required to carry out the duties of an Assistant School Medical Officer in the Borough of Wimbledon, for which area the County Council are the responsible authority. The commencing salary will be between £650 and £700 per annum, according to qualifications and experience A car allowance at the rate of £75 per annum will be paid in addition. Further particulars and forms of application may be obtained from the Medical Officer of Health, to whom applications should be returned by first post on Wednesday, September 12, 1945.—Edwin M. Neave, Town Clerk, Town Hall, Wimbledon, S.W.19.

COUNTY BOROUGH OF WEST HAM. Whipps Cross Hospital, Leytonstone, E.11 (1,300 beds).—The Council invite applications from registered medical practitioners, including those serving in H.M. Forces, for the post of MEDICAL SUPERINTENDENT of the above general hospital. In accordance with the Council's resolution the post will be designated temporary until the conclusion of the war, but if satisfactory service has been given the post will be made permanent. The consent of the Minister of Health has been obtained to the making of the appointment. The salary for the post is £1,100 per annum, together with a house valued for superannuation purposes at £100 per annum. On the publication of the revised "Askwith Scale" the Council will amend the salary in accordance with that scale. Candidates must have had both wide clinical and administrative experience, and the possession of higher degrees will be considered an advantage. Preference will be given to candidates who have held already the post of Medical Superintendent to a general hospital. The appointment will be subject to the Council's regulations as made from time to time regarding holidays, sick pay, etc., and the successful candidate will be required to pass a medical examination. Forms upon which application must be made can be obtained from the Medical Officer of Health, 223-225, Romford Road, West Ham, E.7, on receipt of a stamped addressed envelope, and returned to him not later than October 8, 1945. Canvassing members of the Council is prohibited and will disqualify.—Charles E. Cranfield, Town Clerk, Town Hall, West Ham, E.15.

CORPORATION OF DUNDEE. Public Health Department. Dundee Mental Hospital.—Applications are invited from registered medical practitioners for the appointment of SENIOR ASSISTANT MEDICAL OFFICER (B1). Salary is at the rate of £500 p.a., with war bonus and full residential emoluments. Suitably qualified R and W practitioners holding B2 or B1 appointments are invited to apply, but they must have obtained the sanction of the Scottish Central Medical War Committee, Edinburgh, to their application. Applications should be sent to the Medical Superintendent, Mental Hospital, Westgreen, Dundee. No married quarters are available.

CITY OF NORWICH. Woodlands Hospital (311 beds). ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners for the appointment of Assistant Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of one year. The salary is at the rate of £250 per annum, with full residential emoluments. Further particulars of appointment to be obtained from the Senior Medical Officer, Woodlands Hospital, Bowthorpe Road, Norwich, and to whom applications should be sent.—Bernard D. Storey, Town Clerk, City Hall, Norwich.

CITY OF SHEFFIELD. King Edward VII Hospital for Crippled Children, Sheffield, 6. RESIDENT MEDICAL OFFICER (B1), female.—Applications are invited from registered medical practitioners for the appointment of Resident Medical Officer to the above Hospital (140 beds), which is for the treatment of surgical tuberculosis and other orthopaedic conditions. Suitably qualified W practitioners holding B2 appointments are invited to apply. Salary £350 p.a., rising by £25 to £550, with residential emoluments valued £150. Post vacant now. Applications should be sent immediately to the Medical Superintendent.

WEST SUSSEX COUNTY COUNCIL.—Applications are invited for the appointment of PART-TIME PSYCHIATRISTS (approximately 4 sessions a week) for Child Guidance Clinics. Candidates should have recognized medical qualifications and the Diplomas in Psychological Medicine. They should have had a training in Child Psychiatry and Child Guidance work. Remuneration on a sessional basis at £2 12s. 6d. per session or more, according to experience and qualifications, plus reasonable travelling expenses from London. Applications should be forwarded to the undersigned as soon as possible.—T. C. Hayward, Clerk of the County Council, County Hall, Chichester.

KINGSTON-UPON-HULL CORPORATION HEALTH DEPARTMENT. City Hospital and Sanatorium.—Applications are invited for the appointment of a TEMPORARY RESIDENT MEDICAL OFFICER (B1) at the above. The appointment is open to registered medical practitioners of either sex, who must be single and have had experience in general hospital work. Possession of the Diploma in Public Health, or similar qualification, and previous experience in a fever hospital or sanatorium will be regarded as additional qualifications. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The appointment is for a period of one year and the salary is £350 per annum, together with board, laundry, and residence. The appointment may be extended for more than one year, in which case the salary, subject to satisfactory service, will be increased by annual increments of £25 to a maximum of £450 per annum, plus increased cost-of-living bonus. Application forms may be obtained from, and should be returned to, the Medical Officer of Health, Guildhall, Kingston-upon-Hull, as early as possible.

KENT COUNTY COUNCIL. Public Health Department. SENIOR MEDICAL OFFICER (B1).—Applications are invited for the above appointment at the County Hospital, Sheppey, which has 150 beds. Applicants should have had previous surgical experience and be capable of undertaking major surgical work. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The salary will be £600 a year, and if the successful candidate possesses a higher qualification in surgery will rise, subject to satisfactory service, by annual increments of £50 to £750 a year. A temporary war addition in accordance with the County Council scale is paid in addition, together with a payment of £120 a year to cover living out. Superannuation can be arranged, if necessary, and the successful candidate will be required to pass a medical examination. Applications, stating age, qualifications, experience, nationality, and the names and addresses of two responsible persons to whom reference may be made as to professional ability, should be sent to the County Medical Officer, County Hall; Maidstone, not later than September 18, 1945.—W. L. Platts, Clerk to the County Council, County Hall, Maidstone.

KENT COUNTY COUNCIL. County Hospital, Dover (130 beds). ASSISTANT MEDICAL OFFICER (B1).—Applications are invited from suitably qualified registered practitioners for the above appointment. Applicants should have had previous hospital experience. Suitably qualified R and W practitioners holding B2 appointments are invited to apply, but applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary £350 to £450, by increments of £25, with full residential emoluments, plus a temporary war addition at present £29 19s. 7d. a year. Married quarters for wife can be provided if necessary, in which case a charge of 25s a week would be made for the board-residence provided for wife. Superannuation can be arranged, in which event medical examination will be necessary. The successful candidate will, from time to time, be required to undertake relief work in the hospitals administered by the Council in the Ashford and Folkestone areas. Applications, stating age, qualifications, experience, nationality, and the names and addresses of two responsible persons to whom reference may be made as to professional ability, to be sent to the County Medical Officer, County Hall, Maidstone, by September 18, 1945.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

NORFOLK COUNTY COUNCIL. Attleborough Emergency Hospital. TEMPORARY RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered medical practitioners of either sex. Salary £500, rising by £25 to £550 per annum, together with board, residence and laundry, valued at £100 per annum. Preference will be given to applicants reading for the Fellowship. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The practitioner appointed may also be required to do work outside the hospital. Applications should be addressed to the County Medical Officer, 29, Thorpe Road, Norwich, Norfolk.

UNIVERSITY COLLEGE HOSPITAL. Radiotherapy Department.—Applications are invited for the post of PART-TIME ASSISTANT RADIOTHERAPIST for five afternoon sessions per week at a salary of £400 per annum. Applicants must have had experience in Radiotherapy and hold the Diploma of Radiology. Applications from R practitioners now holding B1 appointments cannot be considered unless they are medically unfit. Details of the duties are available on application. Applications to the Secretary, University College Hospital, Gower Street, W.C.1 not later than Sept. 22, 1945.

GLAMORGAN COUNTY COUNCIL. West Glamorgan County Hospital, Neath. — Applications are invited for the post of TEMPORARY JUNIOR RESIDENT ASSISTANT MEDICAL OFFICER (B2), male or female, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise will be for a period not exceeding one year. Inclusive salary of £225 per annum, rising by annual increments of £25 to £325, plus prevailing cost-of-living bonus and residential emoluments. All fees whatsoever received by the successful applicant whilst holding the appointment must be handed over to the County Council. The appointment will be terminable by one month's notice on either side. Applications should be sent to the County Medical Officer, County Hall, Cardiff, within ten days of the publication of this advertisement.—D. J. Parry, Clerk of the County Council, Glamorgan County Hall, Cardiff.

NORTHUMBERLAND COUNTY COUNCIL. Wooley Sanatorium, Nr. Hexham.—Applications are invited from registered medical practitioners for the appointment of TEMPORARY MEDICAL SUPERINTENDENT at Wooley Sanatorium (184 beds). Applicants should have had special experience in the diagnosis and treatment of pulmonary tuberculosis and in institutional administration. The candidate appointed will also be required to act as Tuberculosis Officer for the Hexham Division of the County. The salary will be £650, rising by biennial increments of £50 to £850 per annum, with emoluments, house, coal, and light, valued for superannuation purposes at £150 per annum. The commencing salary on this scale will be determined according to experience. The appointment is subject to the provisions of the Local Government Superannuation Act, 1937, and the successful candidate will be required to pass a medical examination. The appointment will be determinable by three months' notice on either side. This is a temporary appointment, but there is a vacancy on the permanent establishment. Applications, accompanied by copies of three recent testimonials, upon forms to be obtained from the County Medical Officer at the address below, should be returned to him not later than September 28, 1945.—C. Harold Carter, Clerk of the County Council, County Hall, Newcastle-uupon-Tyne.

SURREY COUNTY COUNCIL. St. Luke's Hospital, Guildford (500-600 beds). WHOLE-TIME PATHOLOGIST.—Applications are invited from suitably qualified practitioners, male and female, for the appointment of Whole-time Pathologist to the St. Luke's Hospital, Guildford (which includes the large B.M.S. Radiotherapy Unit). Applicants should have had wide pathological experience and be of senior standing in the profession. The person appointed will be in charge of the work of the Pathological Laboratory at the hospital, where there are at present two Technicians employed, and will be required to perform all autopsies. The appointment will be temporary and subject to three months' notice on either side, but any Local Government Superannuation rights will be preserved. The permanent appointment will be re-advertised later in order to give doctors at present serving with H.M. Forces an opportunity to apply after their discharge. Commencing salary according to experience on the grade £1,000 by £50 to £1,500 p.a. Apply to the County Medical Officer, County Hall, Kingston-upon-Thames, by October 15, 1945. This temporary appointment is advertised by permission of the Ministry of Health.

SURREY COUNTY COUNCIL. Epsom County Hospital, Dorking Road, Epsom (350 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ASSISTANT MEDICAL OFFICER (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Applicants must have held house appointment, with general experience, and should be capable of administering anaesthetics. Salary at the rate of £250 p.a., plus full residential emoluments and war bonus. Apply to the Medical Superintendent at the hospital by September 12, 1945.

ROYAL SUSSEX COUNTY HOSPITAL, Brighton. Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (B2), now vacant. There will be opportunities for gaining experience in general surgery, fractures and orthopaedic work. The salary is at the rate of £200 per annum, with full residential emoluments. R and W practitioners who now hold A posts may apply, when appointment will be limited to six months, otherwise may be extended. Applications to L. L. W. Lancaster-Gaye, Secretary-Superintendent.

ALTRINCHAM GENERAL HOSPITAL (100 beds), Nr. Manchester.—Applications are invited for the appointment of RESIDENT SURGICAL OFFICER (B1). The post offers considerable scope in operative surgery, and the holder must have had experience to enable him to undertake the work. Salary £250 p.a., with full residential emoluments. Suitably qualified R practitioners holding B2 appointments, those holding B1 appointments and rejected by the R.A.M.C., and those discharged from the Forces may apply. Applications to General Superintendent.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 11

UNIVERSITY OF LONDON,
KING'S COLLEGE.
FACULTY OF MEDICAL SCIENCE.

The Medical Faculty at this College of the University gives instruction in the subjects of medical science for all the usual pre-medical and intermediate examinations in medicine, surgery, and dentistry. Through the four associated hospitals, students of the College have clinical facility of over 1,000 beds. The Medical Faculty of the College provides a *general university education* in touch with other faculties, classes of which medical students are permitted to attend. There are many college societies, clubs, and functions, in which students of all faculties have opportunity of meeting each other. The College has an excellent athletic ground at Mitcham with a new and well-equipped pavilion. The first year subjects are taught in the departments of the Faculty of Natural Science and those for the second and third years in the Faculty of Medical Science. This consists of the Hambleden Department of Anatomy and the extensive Department of Physiology. The buildings of these Departments provide the College with a complete Medical Faculty which embodies the newest up-to-date ideas in laboratory construction and equipment. Valuable scholarships and prizes are awarded on the results of examinations held annually.—S. T. Shovelton, M.A., Secretary, Strand, W.C.2.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY SEPTEMBER 8 1945

HEARD AT HEADQUARTERS

Committee for Northern Ireland

A B.M.A. Standing Committee for Northern Ireland, after the pattern of the Scottish Committee, is being inaugurated. Its members will consist of the principal central officers of the Association, the president and secretary of the Northern Ireland Branch, members of the Council who are resident in Northern Ireland (two at the moment), and one representative from each of the Divisions. Three members specially qualified to assist the business of the committee may be added, and these co-opted members will have full voting powers. The committee may elect any of its members as chairman, but if the chairman is not a member of the central Council someone who is a member of the Council must be appointed as deputy.

The business of the committee will be to consider all matters that concern Northern Ireland and to deal with them in conformity with the decisions of the Representative Body, or, on matters raising new points of principle or new policy, to make a recommendation to the Council. It will also be required to report to the Council on its work.

The Northern Ireland Branch was constituted in 1878, four years later than the South of Ireland Branch.

Medical Insurance in the U.S.A.

During the past seven years the enrolment of U.S. citizens in what is known as the Blue Cross hospital plan—a sort of mammoth Hospital Saving Association—has reached the impressive total of 17,500,000. These people make small regular payments of from 8 to 10 dollars a year for each person or from 18 to 24 dollars for each family, and then the haunting fear of hospital expense is lifted from their minds. But the hospital is only one of the major costs of illness, the other being the fees of doctor or surgeon, and this side of the question has not been dealt with to the same extent. There are not more than 4,000,000 subscribers insured against the charges of a physician or surgeon. In some areas, however, the idea has “ caught on ” more widely, and in Michigan, for a payment of rather less than half a dollar a week per family, over three-quarters of a million people are insured for surgical and obstetric care.

The L.C.C. and the Education Act

The L.C.C. is completing its arrangements for the medical treatment of schoolchildren under the new Education Act. An existing regulation provides that fee-paying pupils from (former) secondary schools may receive medical treatment at the school treatment centres provided the parents cannot afford to make the necessary private arrangements. The payment is the average full cost of the case. Under this regulation a few fee-paying pupils from secondary schools have been treated, mainly for visual dental defects. It is considered now that there will probably be some demand for similar facilities for pupils attending non-maintained schools, and it has been decided that, provided accommodation and staff are available at the centres, this arrangement should be continued and extended to all pupils (including fee-paying pupils) attending any recognized school.

The Education Act allows the local education authority to make such arrangements with the proprietors of any school or educational establishment in its area which is not maintained by the authority. It also empowers an authority to make arrangements for the medical inspection of pupils attending non-maintained schools; and the county council proposes that, on request by the proprietors, the council school medical and nursing staff shall carry out such inspection.

Postgraduate Correspondence Courses

The idea of postgraduate correspondence courses has been taken up rather enthusiastically in Australia during the war. From a publication of the New South Wales Postgraduate Committee in Medicine, which it attached to the University of Sydney and receives a grant from the N.S.W. Government, it appears that a whole series of such courses—primarily for members of the Services—has been started and has proved of real educational value in the special circumstances and disabilities in which most of the candidates have been placed. One of the courses is in medicine suitable for candidates for examination for membership of the Royal Australasian College of Physicians. A course in anatomy has been given in the same way, with a set of 25 *x*-ray films, followed by about 40 dossiers, sent to each candidate, each dossier containing numerous drawings to illustrate its text. There are correspondence courses in physiology, in neurology, and in biochemistry, and one correspondence course is being started for general practitioners who are at present on service. Another correspondence course is arranged for examination for the diploma in psychological medicine, and yet another for candidates seeking the diploma in anaesthesia. There is also a composite correspondence course suitable for candidates for examination for Part I of the M.S. degree.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Dr. William Brockbank, F.R.C.P., at 2, St. John Street, Manchester, 3; Dr. Douglas McAlpine, F.R.C.P., at 27, Harley Street, London, W.1; Mr. J. Leslie Orr, F.R.F.P.S., at 15, Royal Terrace, Glasgow, C.3; Dr. George Riddoch, F.R.C.P., at 16, Devonshire Place, W.1; Mr. Everard Williams, at 97, Harley Street, London, W.1; and Mr. Geoffrey Keynes, F.R.C.S., at 31, Weymouth Street, London, W.1.

E.M.S. BEDS IN VOLUNTARY HOSPITALS

The Minister of Health has now reviewed the position concerning the beds held at voluntary hospitals for the purposes of the Emergency Hospital Scheme, and hospitals are being notified in a circular letter either that they will not be required to reserve any beds for E.M.S. purposes after October 1 or that only a reduced number need be so held after that date. Each hospital is being individually informed according to the decision taken in its particular case.

The circular also contains a statement on the financial position of the hospitals after this reduction or cancellation has taken effect, and we quote below the relevant paragraphs:

> “ The Minister understands that there may be cases in which the reduction or cancellation of these emergency bed reservations may so affect a voluntary hospital financially as to make it difficult for it to continue to provide proper hospital services of the type and on the scale needed from it by the public. As is well known, the Government have under consideration the long-term arrangements for hospital services in the future National Health Service, including the financial arrangements affecting voluntary hospitals participating in that service. These arrangements, clearly, cannot come into operation in the immediate future. Equally clearly, the present scale of bed reservations and consequent payments to hospitals from public funds should not be artificially prolonged beyond the proper needs of the diminishing Emergency Scheme. There is, therefore, bound to be an interim period during which the emergency arrangements contract or disappear before the new long-term arrangements begin to operate.
>
> “ To assist the hospitals during this interim period, the Minister proposes to seek Parliamentary authority to make Exchequer grants during the financial year beginning in April, 1946, to such voluntary hospitals as establish their need for such assistance in order to maintain proper services. The details of these grants, and of the machinery for their administration, are under consideration.
>
> “ The Minister contemplates that in establishing their individual needs for this interim grant assistance it will be for the hospitals to indicate *inter alia* the arrangements proposed by them for the payment of medical staff and generally for the maintenance of any new or improved services developed in them during the working of the Emergency Scheme. It is important, in the Minister's view, not only that the continuance of the present standards of hospital service should be assured, but that the improved facilities and valuable new developments of the wartime period be fully kept in being until the long-term reorganization of hospital services can absorb and enlarge them. In particular the Minister attaches importance to the continuance and development of the practice, which the Emergency Scheme has fostered, of the remuneration of both visiting and other specialist medical staff in hospitals. It seems certain that this practice will be a feature of any long-term hospital reorganization, and the

Minister trusts that during the interim period hospitals will make adequate arrangements to this end in substitution for any payments which have hitherto been made to such staff under the Emergency Scheme and which might otherwise cease with the reduction of the Scheme's requirements. It would be appropriate, for the interim period, that such arrangements might accord with the scales and conditions applicable within the Emergency Medical Service."

Correspondence

The New Government and the Negotiations

SIR,—We have every reason to be grateful to Mr. Greenwood and Mr. Bevan for making it perfectly plain that agreements entered into by any Minister have no binding power on his successor. If there are any left who imagine that things would have been different had a National Health Service Act been actually on the Statute Book, it is only necessary to remind them that Acts of Parliament can be quite easily repealed in whole or in part.' The present Government has already announced its intention of thus dealing with the Trades Disputes Act, and it is fresh within all our memories how one of Mr. Bevan's predecessors by unilateral action dealt with the N.H.I. Act. Indeed, we should have been in a far worse case had a N.H.S. Act been already in force, for we should then have been reduced to an ineffectual protest as we were in the case of the N.H.I. Act mentioned above. As it is we are still free men and women with power to fight for our freedom.

Another illuminating remark of Mr. Greenwood's is that Mr. Willink made "unnecessary concessions" to us. It is obvious to the meanest intelligence that no National Health Service can be worked without our aid. That being so, one would have thought that any Minister would go to very great lengths to obtain our co-operation. Apparently Mr. Greenwood does not think so, and is prepared, if necessary, to order us in. It would be interesting to know what methods of compulsion he proposes to adopt. It is thus very necessary for us to reconsider our own attitude, always bearing in mind that any "concessions" that may be made to us now have only temporary value, and can be revoked at any time by any Minister with a Parliamentary majority behind him. In that case, obviously, the less we commit ourselves the better.

There was a very useful motion passed at the December meeting of the R.B. which was then allowed quietly to drop. I suggest that it should be brought out of cold storage and re-presented as a *sine qua non*. It is so important that I will quote it in full from the Minutes (No. 95). "That health legislation should proceed by evolution, and the R.B. is of the opinion that the objects aimed at will be achieved by completion of the N.H.I. service to embrace institutional, specialist, and all auxiliary services; and when this is accomplished the expansion and extension of N.H.I. to dependants of those insured and to others of similar economic status." That would at any rate give us breathing space. Another good motion passed at the same meeting, which advocated separate legislation for health services and for social security (No. 241), could also well be dug out again. The proposal that people should be allowed to "contract out" of the new scheme would be much more effective if it was reversed and the scheme made voluntary with permission to anybody to "contract in."

Lastly, while I am convinced that with discipline and unity we need not fear the odds against us, without them we can accomplish nothing. The danger is grave, not only to our own liberties but to those of the community at large. If we are subjected to State control, our patients must necessarily be likewise, at least to a certain extent. It is therefore not only in our interests, but also in theirs, that we should defend our position with determination against both blandishments and threats. As I read it, Dr. Hill's article in the *Daily Mail* of Aug. 29 is in agreement with this, but it is a point which cannot be too much or too often stressed, for I do not believe that the nation at large realizes that with our freedom theirs goes also.—I am, etc.,

Andover. J. A. BALCK-FOOTE.

Medical Demobilization

SIR,—On what would appear to be the eve of victory this communication may seem to be outside the prevailing mood of the moment, but it states what I have felt for some time.

I should like to associate myself with the opinions expressed in recent numbers of the *Supplement* by serving Naval medical officers. I refer to the letter by Surg. Lieut. R. Alexander (June 23, p. 127) and one by "Two Naval Doctors" (April 28, p. 70). The accusation of "window-dressing" is, I think, a fair one. I feel that in Naval shore establishments there is medical overmanning, and I can call to mind many tiny establishments in the United Kingdom with complements of 300 men, but each with its medical officer employed solely for these numbers.

I am serving in the East Indies, although in Group 20, and there are numerous medical officers of this and lower groups in like case. Most of us were volunteers in 1939, and have served upwards of five years. Most of my colleagues with whom I have discussed this are agreed on the point of over-manning, always excepting the case of ships, where the position is different. Another feature which is a source of some discontent is that those of us who are temporary serving officers, even of considerable experience before the war, have in most cases served throughout without having hospital appointments. On the other hand, it is relatively common for medical officers within three years of qualification (I can think of one within 18 months) to be employed as "specialists." Most of us fear our retention for an unnecessarily long time after hostilities cease, for one reason or another. There is no doubt that relief work will be necessary, and one does not grudge that, but all the same the feeling of insecurity for those of us who have lost our practices and must start afresh grows daily.

I feel, Sir, and am confident that my feelings are shared by the majority of my colleagues among temporary officers, that a more energetic investigation into Service medical manning is long overdue. There is so much dead wood to be cut away.—I am, etc.,

"NAVAL M.O., EAST INDIES FLEET."

The Army Specialist and Release

SIR,—You have printed a large number of letters on demobilization. I would like to point out that there is a good chance of many Army specialists being victimized owing to the fact that conscription is not as rigidly applied as it should be. I am one of the unfortunates who have been informed that I am to be retained on the grounds of military necessity. I have been given no date of possible demobilization; all I know is that I am retained in spite of the fact that my release was applied for under Class B, and refused. I am not to be allowed out even in my normal Class A group because a replacement cannot be found.

I do feel that this is unfair to us, most of whom are "old-timers" and many Territorials. We do feel that conscription must go on and should be in higher age groups than at present.—I am, etc.,

"TERRITORIAL."

A Debt to the R.M.O.

SIR,—I have read with interest the majority of the letters in the *Supplement* on the forcible retention of medical officers in the Forces (the so-called demobilization scheme and/or reallocation of man-power), and as I have an axe to grind may I be allowed a little space in the already overburdened columns of the *Supplement*.

Even a superficial analysis of the letters reveals that the medical officers—the majority regimental medical officers—chiefly concerned are of two types: (*a*) the recently (1939 and early war) qualified; and (*b*) the middle-aged general practitioner. A few months ago I asked a very young-looking captain in the R.A.M.C. how old he was when he qualified. "Twenty-four," he replied, and startled me when he went on grimly, "But I am over 30 now." He had spent the time between qualifying and conscription as a locum-tenent. During his entire Army life he had been living a healthy open-air existence as R.M.O. to an "Ack-Ack" regiment which had disbanded without ever going into action, so that he looked no older than 25. He lamented the fact that on demobilization he would have neither the time nor the money to specialize, and all he could hope for was an assistantship in a practice.

The doctor between the ages of 35 and 40 who, for one reason or another, joined the Forces on or shortly after the outbreak of war is now middle-aged. The majority, never having achieved any specialist qualifications, must necessarily have remained captains (other than the small number who were fortunate, or unfortunate, enough to be promoted D.A.D.M.S., or those who achieved a "crown" by being posted to, and remaining in, a field ambulance unit), and how they, mostly married men with families, have managed to exist on their captain's pay and meet their commitments (mess bills, insurance, house, schooling, clothes, etc.) will either remain a mystery or will emerge later as an interesting or (possibly to some) a sordid story.

A few years ago Sir Henry Tidy wrote a letter to you, Sir, eulogizing the splendid work of the modern regimental medical officer. The contents of this letter were thought to be so important that copies of the full text were circulated to R.A.M.C. officers serving anywhere in the world. My copy arrived in the Desert, where I was then stationed, in the form of Appendix B to D.M.S. Administrative Instructions No. 89 of 1942. A few quotations from this encomium will not be out of place.

> "The health and physical efficiency of the Army lies not in the hands of the hospital surgeon and physician or others of higher rank, but in those of the regimental medical officers. To perform their duties efficiently requires considerable judgment and knowledge. . . . A good regimental medical officer can do more for man-efficiency and man-power than any other officer in the R.A.M.C. The duties of a regimental medical officer are laid down in the Regulations for the Medical Services of the Army. The pages form a somewhat bald and unconvincing narrative, for no touch of human nature is discernible. . . . I repeat, the health and physical efficiency of the Army lie in the hands of the regimental medical officers."

Quite recently I read an account in the *Journal* of a special medical meeting (in India) called to put on record the excellent work done by regimental medical officers. The meeting voted the regimental medical officers as being the backbone of the R.A.M.C., thus comparing them with the Infantry soldiers in the last war. It may be that the Infantry have been soothed by the abracadabra of the capital "I" as recently allowed to them and by hypocritical speeches in the House by members with an eye on their constituencies, but no such cabalistic signs nor unctuous rhetoric will serve to mollify the angry mood of the more intelligent regimental medical officers. For not the 8th Army alone became aware of the invaluable work done by the R.A.M.C. in general and the untiring and persistent efforts of the regimental medical officers in particular. Rommel and his Afrika Corps must also have realized, too late, the colossal dividends those efforts had brought us: first, in the dust and torrid heat of the Western Desert, where not the superior guns, tanks, and planes, nor yet the courage and bravery of our troops were alone responsible for victory, but the effective control of flies trailing dysentery, the prevention of which spelt that essential health and physical fitness to which Sir Henry Tidy referred, and which is the prerequisite for the high morale of a successful campaign; and later in Sicily, where the Hun, not yet having learnt his lesson, treated the ubiquitous mosquito with the same unhealthy contempt.

After six years of such effort a grateful Government is showing its intense appreciation by offering the medical officer, a professional man, the gigantic sum of a few hundred pounds for services rendered. America, Australia, Canada, and South Africa appear to have arranged to pay their regimental medical officers in a manner more commensurate with their knowledge and work.

This letter has been written in the mood of the moment. A return to that high dignity normally associated with the medical profession will recur when those high-ranking representatives of the Government receive another letter, written by another with the same shrewd perception and profound knowledge of men and medicine as Sir Henry Tidy, (is it too much to hope that he himself will write such a letter?) who with Socratic wisdom might counsel: "You owe a debt to Aesculapius; see that it is paid"—in hard cash.—I am, etc.,

Washford. J. B. LURIE, Capt., R.A.M.C.

Terms of Service

SIR,—As one who, on the grounds of ill-health, is leaving the Services after ten years and views the future of the profession with something akin to horror, may I be permitted to add my voice to those crying in the wilderness of apathy and "gutlessness" into which so many of our brethren seem to have strayed. More power to J. A. Balck-Foote, W. R. E. Harrison, Guy Bousfield, and others. Who is the Minister of Health to dictate to the medical profession the terms on which they shall live and work? Agree, yes; dictate, no. If we are to be Government servants let us demand now a full public statement of the proposed terms of service, the proposals for the selection of both patient and doctor, the hours of work, the selection of areas, etc. This secret Nazi type of dictatorship and boot-licking is not good enough. Let the Ministry try such tactics on a trade union and see the answer that would be returned. We doctors need something of that type to protect our interests. Why does not the G.M.C. take it up, get the proposals, and then circularize all on the *Register* and all medical students for their opinions? Make the filling up of the form obligatory if necessary. United the medical men could defy any Ministry, and the public would support us if they were made to see the full implications of such a service. As civil servants let us demand a closed shop, a 46-hour week, holidays with pay, the right to strike if our few remaining privileges are curtailed by some future Ministry, and other similar claims. The labour machine from which we have suffered so often might be no bad thing for us to copy now in this hour of democracy.—I am, etc.,

"MAJOR, I.M.S."

First Things First

SIR,—In the welter of controversy over details the medical profession bids fair to lose sight of fundamentals in the planning of a medical service. Those fundamentals, rarely formulated, are instinct in the tradition of medicine, and have informed the whole of the profession's past behaviour. Few could be found to deny that the medical profession, in its record of devoted service to the community, in its outstanding scientific and clinical progress, and in its response to the appeal *ad misericordiam*, is equalled by few professions and by no trades. And that record is the result of individual effort and of self-developed co-operation.

The fundamentals remain, and will remain so long as medical men are powered by conscience and the sense of vocation. Because they will remain, because the profession is still true to the spirit of the Hippocratic oath, any medical service planned and imposed from without will work, in the sense that the sick will continue to be treated. But the inevitable sequel of bureaucratic control is the progressive atrophy of the conscience, and the time is not far distant, if medicine is governed by regulation, when the appeal *ad misericordiam* will go unanswered. Then, Sir, we shall be no longer a profession but a trade.

Can there not be put in the forefront of our councils, be read and subscribed to by each of our negotiating bodies at every meeting, be observed in the spirit in all our deliberations, these fundamental principles of the medicine that all have respected in the past?

A. The adequate treatment of the sick is our pre-eminent care and duty and a privilege that we guard jealously.

B. The principle of justice applies, equally with others, to the medical profession.

C. Freedom, which is the individual's right to have justice, is still worth fighting for.

D. In unity alone is strength, and to unity much must be sacrificed.—I am, etc.,

Southsea. NIGEL CRIDLAND.

Question and Answer

SIR,—I would like to add my support to the letter of Dr. Guy Bousfield (*Supplement*, July 28, p. 18). I feel very strongly that we are in danger of drifting into a State medical service, which, once instituted, will be irrevocable, when there has been insufficient opportunity offered to practitioners to vote either for or against such a service.

My own particular case is no doubt typical of many other medical practitioners. I returned to this country in 1944 after a period of oversea service in the R.A.M.C. to find a White Paper being published which formulated proposals for a State medical service. As a doctor, and consequently a very interested person in this revolutionary scheme with all its implications regarding my future career, I would have expected to receive a copy of the White Paper and also to have an opportunity to vote either for or against State medicine. It was not, however, until some months later that, feeling my name had been overlooked, I made written inquiry about the matter, and I received a copy of the White Paper and the questionary, which, I believe, was to have been sent to all members of the profession.

What I wish to point out are the two following facts: (1) With my own case as an example, a great many doctors, especially those in the Services, have never had an opportunity to express their opinion either for or against a State medical service. (2) The results of the questionary, which will presumably be used as a basis for discussion with the Ministry of Health if the proposal for State medicine goes forward, are themselves unsatisfactory and inconclusive, since the document was too bulky, and many of the questions were incapable of being answered sincerely by younger doctors who had qualified either just before or during the war years, and who, consequently, could have insufficient knowledge of the detailed answers demanded, their time heretofore having been spent in the Services and not in general practice.

I certainly consider with Dr. Guy Bousfield that for the present one question only should be submitted to every member of the profession: "Are you or are you not in favour of a State medical service?" And each doctor should be placed under a moral obligation to answer "Yes" or "No." A majority vote one way or the other having thus been obtained, negotiations with the Government could either proceed or be dropped according to the expressed wish of the profession as a whole. Those of us who had hitherto been forgotten would at least have the satisfaction of knowing that we had been allowed to express an opinion on a matter which affects our future so vitally.—I am, etc.,

Harrogate. HARRY R. W. HAWSON.

Medical Man-power

SIR,—Most of us appreciate the difficulties encountered by the Central Medical War Committee in its negotiations to ensure a just and speedy demobilization of serving medical officers. I hesitate to add to its burden, but I would like to suggest that it again stresses the need for a thorough search of the Service Departments to check the gross wastage of medical man-power as revealed in your correspondence columns.

May I add a further instance. At the present time a large number of doctors are engaged in the medical examination and disposal of all returned prisoners of war. Each man is seen by no fewer than five medical officers—one on arrival in this country, two whilst on leave, and two on return to an Army unit. Any man requiring a specialist's opinion is examined by more than five. Even taking into account the prolific clerical duties required of these medical officers it is difficult to see the reason why this wealth of medical opinion should be necessary. Now that the war is ended there would appear to be no justification for continuing to retain large numbers of medical officers either as a potential "reserve" or employed in reduplicating each other's work.

Some of us, about to enter our seventh year of service in the junior ranks, would do so more willingly if there were any evidence that the higher Service authorities were prepared to listen to reasonable suggestions of economy from those of us directly concerned. I regret that I can find no such evidence, with the result that urgent civil medical requirements will remain unsatisfied this winter, while many of us in the Services will be wasting our time.—I am, etc.,

"WRITER'S CRAMP."

War Gratuities

SIR,—Dr. Edgar Rentoul (*Supplement*, Aug. 18, p. 47) queries my contention that it is unfair to give a larger gratuity to medical officers than to others. As he points out, the short-service gratuity was given not on grounds of justice but purely to satisfy the laws of supply and demand. At the outbreak of war patriotism, the National Service Acts, or a mixture of both, replaced the gratuity as an incentive to recruitment.

If justice is to be invoked then all branches should get the same war gratuity, but, as we have seen, there was never any question of justice. Expediency was the only reason for giving the short-service gratuity, and it is no longer expedient. In any event the argument is purely academic. Even if one converted the Treasury no politician would give preferential treatment to 26,000 men leaving 7,000,000 unsatisfied.

The only constructive suggestion I can make is that in addition to the gratuity surplus war stores should be distributed amongst all Reserve and Territorial officers and men. There are obvious drawbacks to such a scheme, but it might be made workable, and a car and/or drugs and instruments might well be almost as valuable as the ready cash.—I am, etc.,

C. J. ROBARTS,
Surg. Lieut.-Cmdr., R.N.

It has been announced by the War Office that the release of medical officers will be proceeded with up to Group 23 by Jan. 20, 1946, in step with the rest of the Army.

BRITISH MEDICAL ASSOCIATION

Election of Member of Council by the Metropolitan Counties Branch

The following candidates have been nominated for the vacancy in the Council (Group I):

C. G. Martin (Lambeth).
R. Scott Stevenson (Marylebone).

Voting papers will be issued to all members of the Metropolitan Counties Branch on Sept. 15, 1945.

CHARLES HILL,
Secretary.

Branch and Division Meetings to be Held

WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—At Clayton Hospital, Sunday, Sept. 16, 11 a.m., Postgraduate Lecture by Dr. Leslie Watson: Assessment of Albuminuria.

H.M. Forces Appointments

ROYAL ARMY MEDICAL CORPS

Lieut. (War Subs. Capt.) B. S. Powell, from Emergency Commission, to be Lieut. (Nov. 29, 1941) and to be Capt. (Nov. 29, 1942).

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

War Subs. Capt. G. S. Seed to be a Consultant and is granted the local rank of Brigadier.

War Subs. Major W. H. Bradfield to be Major.

War Subs. Capt. H. D. Crosswell has relinquished his commission on account of disability, and has been granted the honorary rank of Capt.

TERRITORIAL ARMY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Capt. F. J. Whitelaw has relinquished his commission on account of disability, and has been granted the honorary rank of Major.

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

War Subs. Capt. W. K. Chalmers has relinquished his commission on account of disability, and has been granted the honorary rank of Major.

War. Subs. Capts. S. Ross and R. A. Morea have relinquished their commissions on account of disability, and have been granted the honorary rank of Capt.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

War Subs. Major A. W. Woolley, from Supplementary Reserve of Officers, to be War Subs. Major.

ROYAL AIR FORCE

Wing Cmdrs. (Temp. Group Capts.) G. P. O'Connell and A. Dickson to be Group Capts.

Wing Cmdrs. J. D'I. Rear and C. J. S. O'Malley, C.B.E., to be Group Capts. (Temp.).

Squad. Ldrs. (Temp. or War Subs. Wing Cmdrs.) J. F. Sandow and A. M. Weston to be Wing Cmdrs.

Squad. Ldrs. J. C. Bowe, F. L. Whitehead, and C. E. G. Wickham to be Wing Cmdrs. (Temp.).

RESERVE OF AIR FORCE OFFICERS

Squad. Ldr. A. Muir to be Wing Cmdr. (Temp.).

ROYAL AIR FORCE VOLUNTEER RESERVE

Squad. Ldr. J. H. Hunt to be Wing Cmdr. (Temp.).

Squad. Ldr. (Temp.) J. B. Shield to be War Subs. Squad. Ldr.

Fl. Lieuts. to be Squad. Ldrs. (Temp.): J. H. O'Connell, R. Piper, D. S. Young, H. F. S. Beadles, S. J. Hadfield, H. Halson, B. S. Kent, W. J. Lawrence, J. H. McIlrath, R. W. K. Purser, C. R. Savage, A. G. Leigh, E. J. Blair, J. D. Jenkins, T. Fenwick, W. B. Waterfall, A. T. M. Roberts, C. H. Stewart-Hess, J. P. Bentley, R. S. Carpenter, C. H. George, M. J. Greenberg, J. Whitehead, M. N. Phillips, J. M. Sword, C. A. Dowding, D. N. Matthews.

Flying Officers J. H. Playne, C. H. Gattie, D. A. Patel, and B. C. Smith to be War Subs. Fl. Lieuts.

AUXILIARY AIR FORCE

Squad. Ldr. W. D. Coltart to be Wing Cmdr. (Temp.).

WOMEN'S FORCES

EMPLOYED WITH MEDICAL BRANCH, R.A.F.

Flying Officers V. Auld, J. I. M. Macauley, E. E. McGuinness, E. M. McKechnie, E. C. S. Williams, M. Williams, M. Armstrong, A. B. Lornie, and E. C. Strang to be War Subs. Fl. Lieuts.

SCOTTISH COMMITTEE, SESSION 1945–6

Election of three representatives by the Group of seven Divisions comprising Orkney, Shetland, Caithness and Sutherland, Inverness, Outer Islands, Ross and Cromarty, and Argyllshire.

In accordance with the Standing Orders of the Scotish Committee nominations for these three vacancies shall be in writing, and may be (*a*) made by a Division or (*b*) signed by not fewer than three members of the group. Nomination forms have been sent to the Hon. Secretaries of the Divisions in the Group, and can also be obtained on application to the Scottish Office.

If more than three members are nominated the election shall be by voting papers sent by post from the Scottish Office to each member of every Division in the Group.

Nominations should be sent to me at the Scottish Office, 7, Drumsheugh Gardens, Edinburgh, not later than Sept. 22, 1945.

R. W. CRAIG,
Scottish Secretary.

POSTGRADUATE NEWS

The Fellowship of Medicine announces the following courses: (1) Revision course in anaesthetics at Royal Cancer Hospital, Fulham Road, S.W., Oct. 8 to 20, with lectures and/or demonstrations daily. (2) All-day course in children's diseases at Princess Louise Hospital, Kensington, Sat. and Sun., Sept. 29 and 30. (3) All-day course in rheumatism at Rheumatic Unit, St. Stephen's Hospital, Fulham Road, S.W., Sat and Sun., Oct. 20 and 21.

The Institute of Laryngology and Otology (330–332, Gray's Inn Road, London, W.C.), in association with the Royal National Throat, Nose and Ear Hospital, has arranged a four-weeks course in laryngology, rhinology, and otology for senior postgraduate students, especially those taking Part II of the D.L.O. examination, from Oct. 29 to Nov. 30. The fee for the course is £15 15s., and the full syllabus may be obtained from the secretary of the institute. Demonstrations and discussions of clinical cases are held on Friday afternoons, and are open to all medical practitioners without fee. A list of dates may be had from the secretary. Clinical assistantships and out-patient assistantships are available at both the Gray's Inn Road and the Golden Square Hospitals.

WEEKLY POSTGRADUATE DIARY

EDINBURGH POSTGRADUATE LECTURES.—At Edinburgh Royal Infirmary, *Thurs.*, 4.30 p.m., Dr. W. Levinthal: The Problem of Bacterial Variability

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTH

BENNIE.—At Stobhill Hospital, Glasgow, on Aug. 29, 1945, to Janet Todd, M.B., D.A., wife of Capt. Thomas Y. Bennie, R.A.M.C., a son.

DEATHS

CARRELL.—On Aug. 28, 1945, suddenly, at his home, Cranbrook, Kingswood, Surrey, G. N. P. Carrell, M.R.C.S., L.R.C.P., aged 89.

POWELL.—On Aug. 2, 1945, James Powell, M.R.C.S., L.R.C.P., D.P.H., much-loved husband of Bess Powell, Hillcrest, Senny Bridge, Breconshire.

READDIE.—On Aug. 27, 1945, very suddenly, at War Memorial Hospital, Scunthorpe, Lincs, Dr. David Readdie, the beloved husband of Hilda (*née* Garside) and dearly loved and only son of Dr. Andrew F. and Mrs. Readdie, of "Danecourt," Lee Mount, Halifax, aged 25 years. Interred at Dukinfield Cemetery, Cheshire, Wednesday, Aug. 29.

The Central Medical War Committee is informed that the rate of release of medical officers from the Royal Air Force has been accelerated. The following age and service groups will be released by the dates shown: By Oct. 31, Groups 13 and 14 (i.e., additional to Groups 11 and 12); by Nov. 30, Groups 15 and 16; by Dec. 31, Groups 17 and 18; by Jan. 31, 1946, Group 19; by Feb. 28, 1946, Group 20.

VASOCONSTRICTION IN MINUTES . . .
BACTERIOSTASIS FOR HOURS

'SULFEX'

FOR INTRANASAL USE

(A *suspension* of microcrystalline ('Mickraform') sulphathiazole, 5%, in an isotonic solution of 'Paredrinex,' 1%)

The intranasal instillation of 'Sulfex' has proved strikingly effective in the treatment of nasal and sinus infections. The suspension has the following advantages :—

(1) **Prolonged Bacteriostasis.** The 'Mickraform' crystals of sulphathiazole are not quickly washed away, but form an even frosting over the nasal mucosa, thus providing bacteriostasis where most needed.

(2) **Non-Stimulating Vasoconstriction.** While 'Paredrinex' exerts a rapid and complete shrinking action, it does not produce nervous side-effects.

(3) **Therapeutically Ideal pH (5.5 to 6.5).** 'Sulfex' does not cause stinging or irritation. Its slightly acid pH range is identical with that of normal nasal secretions.

Samples and further details on *signed* request of physicians

PYREX
REGD TRADE MARK. BRAND
SCIENTIFIC GLASSWARE
A valuable aid in the Laboratory!

THE successful outcome of any test or experiment in the laboratory depends entirely upon the reliability of the glassware used.

• • •

PYREX Brand Scientific Glassware creates confidence by the fact that it possesses the amazingly low co-efficient of expansion of .0000032, and is thus almost completely immune from the effects of sudden and violent thermal changes. At the same time, acids (except hydrofluoric and glacial phosphoric) have no effect upon the surface of this famous glassware.

• • •

Owing to the low co-efficient of expansion of PYREX Brand Scientific Glassware, it has been possible to make the many various vessels of more robust build than that of ordinary glass, thus reducing the risk of breakage due to continuous everyday handling.

PYREX Brand Scientific Glassware is supplied only through Laboratory Furnishers, but illustrated catalogue and two free copies of our Chemist's Notebook will be sent direct on application to us.

Ask for PYREX Brand and see that you get it!

NOTICE.—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.

B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.

A—Whole-time resident house appointments open to practitioners without previous experience.

B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with the Indian Medical Service for the duration of the war. Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a minimum period of 6½ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office to whom all inquiries should be addressed

---

AUCKLAND HOSPITAL BOARD, New Zealand.—Applications addressed to the undersigned and closing at noon on Monday, October 15, 1945, are invited from registered medical practitioners for two appointments as SENIOR RADIOLOGISTS at the Board's Institutions, at commencing salaries of £1,000 per annum, rising by two annual increments of £100 to £1,200 per annum, living out. (New Zealand currency.) Applicants must hold Diploma of Radiology. The appointments are whole-time and are for diagnostic radiology only. The Board's Institutions include: (1) The Auckland Hospital of 1,000 beds (with a Director of Radiology and an Assistant Radiologist already appointed). (2) The Green Lane Hospital of 600 beds, including a Chest Diseases Department. (3) The Middlemore Hospital of 300 beds, including an Orthopaedic Department. New *X*-ray Departments are being opened in the two latter hospitals this year. Conditions and memorandum of appointment may be obtained from the office of the High Commissioner for New Zealand, New Zealand House, the Strand, London, W.C.2. Applications should be endorsed "Senior Radiologist" and sent to New Zealand direct by air mail.—R. F. Galbraith, Secretary.

ADMINISTRATIVE COUNTY OF ESSEX. MEDICAL STAFF.—The County Council invite applications for the appointment at the Oldchurch County Hospital, Romford, of a temporary resident Junior Assistant Medical Officer (B2). Salary £200 a year, plus residential emoluments, valued at £160 a year. R and W practitioners now holding A posts may apply. If held by an R practitioner the appointment will be limited to six months, otherwise it will be for a period of one year. Details of duties can be obtained from the Medical Superintendent of the Hospital. All applications, which must contain full information as to the applicant's position in relation to military service, should be addressed to Mr. G. E. Pegram, Administrative Offices, Laurie Square, Romford.—John E. Lightburn, Clerk of the County Council, County Hall, Chelmsford.

GLOUCESTERSHIRE JOINT BOARD FOR TUBERCULOSIS. Standish House Sanatorium, Stonehouse, Glos.—Applications are invited from registered medical men or women, including R and W practitioners who now hold A posts, for the post of JUNIOR ASSISTANT MEDICAL OFFICER (B2) at the above institution. No previous professional experience is necessary. There are at present 250 beds, including men, women, and children. There is an orthopaedic block. Salary £250 per annum, plus bonus, with board, furnished apartments, and laundry in addition. The appointment is for six months and may be terminable within that period by one month's notice on either side. Closing date Sept. 21, 1945.—Guy H. Davis, Clerk of the Joint Board, Shire Hall, Gloucester.

CITY OF MANCHESTER. Public Health Department. Booth Hall Hospital for Sick Children (760 beds). TEMPORARY VISITING EAR, NOSE, AND THROAT SURGEON (PART-TIME).—The Corporation invites applications for the appointment of Temporary Visiting Ear, Nose, and Throat Surgeon (part-time) at Booth Hall Hospital, Blackley, Manchester, 9, in connexion with the scheme of operative treatment of tonsils and adenoids in school-children. The salary for the appointment will be at the rate of £125 per annum in respect of one weekly session. Forms of application may be obtained from the Medical Officer of Health, Hospitals Administration Section, P.O. Box 399, Town Hall, Manchester, 2, by whom all applications must be received on or before September 26, 1945. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

THE OTAGO HOSPITAL BOARD. University of Otago and Dunedin Hospital, New Zealand.—Applications are invited for the following positions, viz:

(A) FULL-TIME TUBERCULOSIS OFFICER, at a salary at the rate of £1,500 per annum (plus travelling allowance), plus £100 per annum payable by the Otago University Council for teaching duties.

(B) FULL-TIME PSYCHIATRIC PHYSICIAN, at a salary at the rate of £1,500 per annum (plus travelling allowance), plus £100 per annum payable by the Otago University Council for teaching duties.

Applications are also invited for the position of RESIDENT SURGICAL OFFICER (Senior). Candidates must hold a degree in Medicine of a British University, must have been qualified for three years, and have held resident hospital appointments for at least one year. Preference given to unmarried applicants. The duties will be those of superintending house surgeons with, in addition, certain tutorial work under the direction of the Professor of Surgery. Salary to be at the rate of £600 (N.Z. currency) per annum, with board and residence.

Full details may be obtained on application to the High Commissioner's Office, New Zealand Govt., 415, Strand, London.—John Jacobs, Secretary, Otago Hospital Board, Dunedin.

PAPWORTH VILLAGE SETTLEMENT, Nr. Cambridge.—Applications are invited from registered medical practitioners for the appointment of a RESIDENT SURGICAL OFFICER (B1). Applicants should have held house appointments and had experience in tuberculosis and thoracic surgery. Preference will be given to candidates holding the Diploma of F.R.C.S. Suitably qualified R practitioners now holding B2 posts may apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The appointment is for one year in the first place, salary £600 p.a., rising to £800 p.a. by £100, with board, lodging, and laundry. Applications should be sent to the Medical Director, Papworth Village Settlement, Papworth Hall, Cambridge.

READING EDUCATION COMMITTEE. TEMPORARY SCHOOL DENTIST.—Applications are invited from qualified Dental Surgeons, men or women, for the temporary post of full-time School Dentist, to replace an officer who is now on war service. Salary scale, £500 by £25 increments to £650. Commencing salary will be fixed having regard to qualifications and experience. It is possible that the appointment will eventually be made permanent. The candidate appointed will work under the administrative direction of the School Medical Officer and will be required to give his or her whole time to the duties of the post. Applications should reach the undersigned not later than fourteen days after the appearance of this advertisement.—Chief Education Officer, Education Office, Blagrave Street, Reading.

CITY OF STOKE-ON-TRENT. CITY GENERAL HOSPITAL. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners (single, male or female), including R and W practitioners who now hold A posts, for the appointment of Assistant Resident Medical Officer (B2), at the City General Hospital, Stoke-on-Trent. If offered to an R or W practitioner the appointment will be limited to a period of six months, otherwise will be for a period of one year. The salary is at the rate of £250 per annum, plus bonus, with full residential emoluments. The Hospital, which is an Emergency Hospital, has approximately 1,200 beds, and there is excellent scope for medical, surgical, and obstetrical work.—Applications endorsed "Medical Officer, City General Hospital," to be sent to the undersigned immediately.—Harry Taylor, Town Clerk.

CITY OF NOTTINGHAM. The Firs Maternity Hospital.—Applications are invited from registered medical practitioners, male or female, for the appointment of OBSTETRIC HOUSE SURGEON (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Salary at the rate of £300 per annum, plus war bonus, with full residential emoluments. The appointment is not permanent, but may, nevertheless, be determined by either party by one month's notice at any time. Applications should be sent to J. E. Richards, Town Clerk, The Guildhall, Nottingham.

CITY OF BRADFORD. Infectious Diseases Hospitals.—Applications are invited from registered medical practitioners for the post of RESIDENT ASSISTANT MEDICAL OFFICER (B2). Salary £200 per annum, with full residential emoluments. R and W practitioners holding A posts may apply, when appointment will be limited to six months, otherwise it will be for a period not exceeding one year. Applications must be received by the Medical Officer of Health, Town Hall, Bradford, not later than September 18, 1945.—N. L. Fleming, Town Clerk, Town Hall, Bradford.

CITY OF MANCHESTER. Public Health Department. ASSISTANT TUBERCULOSIS OFFICER (TEMPORARY).—Applications are invited for the position of Assistant Tuberculosis Officer (Temporary). Candidates must be registered medical practitioners having special knowledge of medical and surgical tuberculosis, and should state whether they possess the Diploma of Public Health. The commencing basic salary is £675 per annum, but three annual increments of £25 may be granted at the discretion of the Council. A temporary cost-of-living award, which at the present time is £60 per annum, is payable in addition to the foregoing salary. The appointment is subject to the Manchester Corporation conditions of service. The consent of the Minister of Health has been obtained to the making of this appointment. Although the vacancy is on the permanent assignment of staff, the appointment will be temporary for the time being, and subsequently the officer appointed will be eligible to apply for the permanent post. Attention is drawn to Ministry of Health Circulars 2818 and 2881, which require that whole-time Public Health Officers who are of military age must, before applying for any other post, first obtain the prior permission of the Minister of Health. Applications (no special form is issued), endorsed on the envelope "Assistant Tuberculosis Officer," must be addressed to the Medical Officer of Health, Town Hall, Manchester, 2, and not to members of the Committee or Council, and must be received by him not later than September 29, 1945. The gentleman appointed will be under the administrative control of the Medical Officer of Health, and the immediate control of the Senior Tuberculosis Officer. He will be required to devote the whole of his time to the duties of his position, to execute the Deed of Service, to contribute to the Corporation Superannuation Fund, and, if under the age of 30, to the Widows and Orphans Pensions Scheme. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF EDINBURGH. Public Health Department. Mass Radiography Unit.—Applications are invited for the position of JUNIOR MEDICAL OFFICER, to serve in the Mass Radiography Unit of the Corporation. Candidates should preferably have had experience in mass radiography and/or in a tuberculosis department or sanatorium. By agreement with the Department of Health the appointment in the first instance will be on a temporary basis. Salary scale £500 by £25 to £700 plus war bonus at present amounting to £60 per annum. Placing on the scale in relation to the candidate's experience may be given. Candidates already in the Public Health Service will require the consent of the Secretary of State in terms of D.H.S. Circular No. 65/1943. Candidates in England and Wales will require the permission of the Minister of Health. Applications should be sent not later than October 6, 1945, to the Medical Officer of Health, Johnston Terrace, Edinburgh, 1.

CITY OF BIRMINGHAM MENTAL HOSPITAL. Winson Green, Birmingham, 18.—Applications are invited, male or female, for the post of TEMPORARY RESIDENT ASSISTANT MEDICAL OFFICER (B1). Salary £350, rising by annual increments to £450, with full residential emoluments plus £50 for the D.P.M. and war bonus £39 4s. 8d. male, £35 11s 11d. female. Suitably qualified R and W practitioners holding B2 appointments, also R practitioners holding B1 appointments and rejected by the R.A.M.C., may apply. Applications to be sent to the Medical Superintendent by September 22, 1945.

CITY OF NORWICH. Woodlands Hospital (311 beds). ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners for the appointment of Assistant Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of one year. The salary is at the rate of £250 per annum, with full residential emoluments. Further particulars of appointment to be obtained from the Senior Medical Officer, Woodlands Hospital, Bowthorpe Road, Norwich, and to whom applications should be sent.—Bernard D. Storey, Town Clerk, City Hall, Norwich.

CORPORATION OF DUNDEE. Public Health Department. Dundee Mental Hospital.—Applications are invited from registered medical practitioners for the appointment of SENIOR ASSISTANT MEDICAL OFFICER (B1). Salary is at the rate of £500 p.a., with war bonus and full residential emoluments. Suitably qualified R and W practitioners holding B2 or B1 appointments are invited to apply, but they must have obtained the sanction of the Scottish Central Medical War Committee, Edinburgh, to their application. Applications should be sent to the Medical Superintendent, Mental Hospital, Westgreen, Dundee. No married quarters are available.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10

COUNTY BOROUGH OF WEST HAM. Whipps Cross Hospital, Leytonstone, E.11 (1,300 beds).—The Council invite applications from registered medical practitioners, including those serving in H.M. Forces, for the post of MEDICAL SUPERINTENDENT of the above general hospital. In accordance with the Council's resolution the post will be designated temporary until the conclusion of the war, but if satisfactory service has been given the post will be made permanent. The consent of the Minister of Health has been obtained to the making of the appointment. The salary for the post is £1,100 per annum, together with a house valued for superannuation purposes at £100 per annum. On the publication of the revised "Askwith Scale" the Council will amend the salary in accordance with that scale. Candidates must have had both wide clinical and administrative experience, and the possession of higher degrees will be considered an advantage. Preference will be given to candidates who have held already the post of Medical Superintendent to a general hospital. The appointment will be subject to the Council's regulations as made from time to time regarding holidays, sick pay, etc., and the successful candidate will be required to pass a medical examination. Forms upon which application must be made can be obtained from the Medical Officer of Health, 223-225, Romford Road, West Ham, E.7, on receipt of a stamped addressed envelope, and returned to him not later than October 8, 1945. Canvassing members of the Council is prohibited and will disqualify.—Charles E. Cranfield, Town Clerk, Town Hall, West Ham, E.15.

COUNTY COUNCIL OF DURHAM. Holywood Hall Sanatorium, Wolsingham (183 beds).—A LOCUM TENENS is required for the post of Assistant Resident Medical Officer (B1) at the above Sanatorium. Salary, to be fixed in accordance with qualifications and experience, will be at the rate of 10 to 12 guineas per week, payable monthly, with board, residence, and laundry in addition. Suitably qualified R and W practitioners holding B2 appointments and W practitioners holding B1 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Candidates must have held hospital and sanatorium appointments, and have had practical experience in the diagnosis and treatment of tuberculosis. Practical experience in radiology is also required. The appointment will be subject to the regulations for the time being of the County Council relative to the payment of salary in the case of sickness, and will be terminable by one calendar month's notice on either side. Applications to be sent as soon as possible to the County Medical Officer of Health, Shire Hall, Durham.—J. K. Hope, Clerk of the County Council, Shire Hall, Durham

COUNTY BOROUGH OF NEWPORT. Social Welfare Committee.—Applications are invited from registered medical practitioners, male or female, for the temporary appointment of JUNIOR RESIDENT MEDICAL OFFICER (A) at Wooloston House Emergency Hospital, Newport, Mon. Salary £150 per annum, with full residential emoluments. All fees, with the exception of coroners' fees, are payable to the Social Welfare Committee. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months, otherwise twelve months. Applications should be sent at once to Tom Kay, Director of Social Welfare, Town Hall, Newport, Mon.

CITY OF CARLISLE. City General and Fusehill Emergency Hospitals, Carlisle (100 civilian beds, 200 E.M.S. and reserve beds).—Applications are invited for the following appointment: RESIDENT MEDICAL OFFICER (B1), vacant now, for the care of civilian beds. The chief duties are in the Maternity and Gynaecological Wards, and the appointment offers excellent experience of abnormal midwifery. The person appointed will also have charge of some medical and surgical wards. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless rejected by R.A.M.C. Salary at the rate of £350 per annum, plus full residential emoluments. The appointment is for six months in the first instance. Applications should be sent to the Acting Medical Officer of Health, 22, Fisher Street, Carlisle, as early as possible.

CITY AND COUNTY OF BRISTOL. Department of Public Health. ASSISTANT RESIDENT MEDICAL OFFICER.—Applications are invited from registered medical practitioners, male or female, for the immediate appointment of Assistant Resident Medical Officer (B2) at Ham Green Hospital, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will be held for a period of one year. Salary £200 per annum, plus full residential emoluments. Application forms may be obtained from the undersigned, to whom they must be returned, accompanied by copies of not more than three recent testimonials, forthwith.—R. H. Parry, Medical Officer of Health, Kenwith Lodge, Westbury Park, Bristol, 6.

CITY OF COVENTRY. Gulson Road Municipal General Hospital, Gulson Road, Coventry.—Applications are invited from male registered medical practitioners, including practitioners within three months of qualification and liable under the National Service Acts, for the appointment of JUNIOR ASSISTANT RESIDENT MEDICAL OFFICER (A) at the above hospital. The post will be for a period of six months, but terminable at any time by one month's notice. Salary will be at the rate of £250 per annum, plus war bonus and full residential emoluments. Applications should be made at once to the undersigned.—A. Massey, Medical Officer of Health, Council House, Coventry.

COUNTY BOROUGH OF IPSWICH. Borough General Hospital.—Applications are invited from registered medical practitioners, male and female, for the appointment of RESIDENT ASSISTANT MEDICAL OFFICER (B1). Applicants should have held house appointments and had medical experience. Salary at the rate of £350 per annum, plus full residential emoluments. Suitably qualified R and W practitioners holding B2 appointments, also R practitioners holding B1 appointments and rejected by the R.A.M.C., may apply. Applications to the Medical Officer of Health, Public Health Department, Elm Street, Ipswich.

KENT COUNTY COUNCIL. County Hospital, Chatham. TEMPORARY RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners of either sex for the above appointment, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Applicants should have held house appointments and had surgical experience. The salary is £300 a year, with full residential emoluments, plus a temporary war addition at present £29 19s 7d a year for males and £24 2s 4d for females. Applications should state age, qualifications, experience, and the names and addresses of two responsible persons to whom reference may be made as to professional ability, and should be addressed to the County Medical Officer, County Hall, Maidstone, so as to reach him by September 18, 1945.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

KENT COUNTY COUNCIL. County Hospital, Dartford (344 beds). TEMPORARY RESIDENT MEDICAL OFFICER (A).—Applications are invited from suitably registered medical practitioners of either sex for the above appointment. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. The salary is £200 a year, plus a temporary war addition of £29 19s. 7d., with full residential emoluments. Superannuation can be arranged, and the successful candidate will be required to pass a medical examination. Applications should state age, qualifications, experience, and the names and addresses of two responsible persons to whom reference may be made as to professional ability, and should be addressed to the County Medical Officer, County Hall, Maidstone, so as to reach him by September 18, 1945.— W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

MIDDLESEX COUNTY COUNCIL.—TEMPORARY ASSISTANT MEDICAL OFFICER (B1), male, required at NAPSBURY MENTAL HOSPITAL, Nr. St. Albans, Herts. Salary £440 to £510 p.a., plus war bonus according to qualifications and experience, with board, lodging, laundry and attendance. In addition £50 p.a. is paid for D.P.M. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applications to the Medical Superintendent, "Z."—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

SURREY COUNTY COUNCIL. St. Luke's Hospital, Guildford (500-600 beds). WHOLE-TIME PATHOLOGIST.—Applications are invited from suitably qualified practitioners, male and female, for the appointment of Whole-time Pathologist to the St. Luke's Hospital, Guildford (which includes the large E.M.S. Radiotherapy Unit). Applicants should have had wide pathological experience and be of senior standing in the profession. The person appointed will be in charge of the work of the Pathological Laboratory at the hospital, where there are at present two Technicians employed, and will be required to perform all autopsies. The appointment will be temporary and subject to three months' notice on either side, but any Local Government Superannuation rights will be preserved. The permanent appointment will be re-advertised later in order to give doctors at present serving with H.M. Forces an opportunity to apply after their discharge. Commencing salary according to experience on the grade £1,000 by £50 to £1,500 p.a. Apply to the County Medical Officer, County Hall, Kingston-upon-Thames, by October 15, 1945. This temporary appointment is advertised by permission of the Ministry of Health.

SURREY COUNTY COUNCIL. St. Helier County Hospital, Carshalton (862 beds). CASUALTY OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the above appointment, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Previous experience in E.N.T. work desirable. Salary is at the rate of £250 p.a., plus war bonus, plus full residential emoluments.

Applications are also invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), including practitioners within three months of qualification who are liable under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. Salary is at the rate of £120 p.a. plus residential emoluments.

Apply to the Medical Superintendent.

SURREY COUNTY COUNCIL. Farnham County Hospital, Hale Road, Farnham (230 beds).—Applications are invited from registered medical practitioners for the appointment of RESIDENT ASSISTANT MEDICAL OFFICER (B1) to the above general hospital. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applicants must have had previous surgical experience, preferably including orthopaedic work. The appointment will be on the Council's temporary staff and subject to one month's notice on either side, but any Local Government Superannuation rights will be preserved. Salary at the rate of £550 p.a., plus war bonus, plus full residential emoluments. Apply to the Medical Superintendent by September 20, 1945.

SURREY COUNTY COUNCIL. Epsom County Hospital, Dorking Road, Epsom (350 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ASSISTANT MEDICAL OFFICER (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Applicants must have held house appointment, with general experience, and should be capable of administering anaesthetics. Salary at the rate of £250 p.a., plus full residential emoluments and war bonus. Apply to the Medical Superintendent at the hospital by September 12, 1945.

STAFFORDSHIRE MENTAL HOSPITALS BOARD. County Mental Hospital, Burntwood, Near Lichfield. MEDICAL SUPERINTENDENT.—The Staffordshire Mental Hospitals Board invite applications for the permanent post of Medical Superintendent of the County Mental Hospital at Burntwood, near Lichfield, from duly registered male medical practitioners, who must hold the Diploma in Psychological Medicine. Applicants must be experienced in the treatment of all mental disorders and capable of controlling and administering a large mental hospital. The successful candidate must devote his whole time to the performance of his duties as Medical Superintendent, including attendance at out-patient clinics as may be required, and must not engage in any professional or other business or employment other than that of the Hospital, except with the approval of the Visiting Committtee of the Hospital, and all fees received are to be paid over to the Board. He will be required to own a car, for which he will be paid an approved mileage allowance in respect of journeys necessarily performed in the carrying out of his duties. Salary £1,400 per annum, rising by four annual increments of £50 to a maximum of £1,600 per annum, together with emoluments valued at £100 per annum, consisting only of an unfurnished house, rent and rates free. The appointment will be subject to the provisions of the Asylums Officers' Superannuation Act, 1909, and to three months' notice on either side. Applications, endorsed "Medical Superintendent, Burntwood Mental Hospital," must be received by me the undersigned not later than Friday, January 4, 1946. Candidates must state whether they are related to any member of the Mental Hospitals Board, and canvassing, directly or indirectly, will be a disqualification.—T. H. Evans, Clerk to the Mental Hospitals Board, County Buildings, Stafford.

WILTS COUNTY COUNCIL. County and Emergency Hospital, Stratton St. Margaret, nr. Swindon (300 beds). JUNIOR SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners for the appointment of Junior Surgical Officer (B1), male, now vacant. Applicants should have held house appointments, with some experience in anaesthetics. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £350 per annum, with usual residential emoluments. Applications should be sent to the County Medical Officer, County Hall, Trowbridge, as soon as possible.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10

AMENDED ADVERTISEMENT.

BOROUGH OF WIMBLEDON. TEMPORARY ASSISTANT MEDICAL OFFICER.—Applications are invited from suitably qualified persons, men or women, for the above appointment. Candidates already holding a whole-time Public Health appointment under a local authority are not eligible. The successful candidate will also be required to carry out the duties of an Assistant School Medical Officer in the Borough of Wimbledon, for which area the County Council are the responsible authority. The commencing salary will be between £650 and £700 per annum, according to qualifications and experience. A car allowance at the rate of £75 per annum will be paid in addition. Further particulars and forms of application may be obtained from the Medical Officer of Health, to whom applications should be returned by first post on Monday, September 17, 1945.—Edwin M. Neave, Town Clerk, Town Hall, Wimbledon, S.W.19.

LANCASHIRE COUNTY COUNCIL. Jericho Hospital, Bury. RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered medical practitioners for the above appointment. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. UNIVERSITY OF LONDON:
KING'S COLLEGE.
FACULTY OF MEDICAL SCIENCE.

The Medical Faculty at this College of the University gives instruction in the subjects of medical science for all the usual pre-medical and intermediate examinations in medicine, surgery, and dentistry. Through the four associated hospitals, students of the College have clinical facility of over 1,000 beds. The Medical Faculty of the College provides a *general university education* in touch with other faculties, classes of which medical students are permitted to attend. There are many college societies, clubs, and functions, in which students of all faculties have opportunity of meeting each other. The College has an excellent athletic ground at Mitcham with a new and well-equipped pavilion. The first year subjects are taught in the departments of the Faculty of Natural Science and those for the second and third years in the Faculty of Medical Science. This consists of the Hambleden Department of Anatomy and the extensive Department of Physiology. The buildings of these Departments provide the College with a complete Medical Faculty which embodies the newest up-to-date ideas in laboratory construction and equipment. Valuable scholarships and prizes are awarded on the results of examinations held annually.—S. T. Shovelton, M.A., Secretary, Strand W.C.2.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY SEPTEMBER 15 1945

MR. BEVAN'S HOPES FOR NATIONAL HEALTH SERVICE

The new Minister of Health, the Rt. Hon. Aneurin Bevan, M.P., made his maiden speech in that capacity at the annual dinner of the Royal Medico-Psychological Association, held at the Savoy on Sept. 5, with Col. A. W. W. Petrie, president of the association, in the chair.

Mr. Bevan said that he had noticed during the past few weeks a tendency on the part of political speakers to adopt a depressing attitude to health and housing problems. He, on the contrary, felt distinctly optimistic. He was convinced that a nation which had achieved so much during the last six years would not fail to surmount these difficulties. War, whatever evil it might entail, was good for mental health. As the late Wilfred Trotter had said, it brought men together in moral unity, concentrating their energies against an outside foe. It induced a psychological buoyancy, a dedication of the spirit. But the war was now over, and the moral unity which had sustained us was in danger of fragmentation. It was now for the Government to provide the British people not only with work, but with work informed by design, so that to the tasks of peace the same dedication might be brought.

It was not to be expected (Mr. Bevan continued) that he would say much about the National Health Service. His mind was not fully made up, and any definite conclusions he formed must first be given to his colleagues in the Cabinet and to the House of Commons. But when they got to principles and administrative details he did not think very much would be found to separate him from the medical profession. On both sides they were anxious to provide the people with the best kind of medical service. He knew that the doctors felt anxious lest there should close upon them a national machine which would obliterate their individuality.

"They need have no fear—no fear at all. I conceive it the function of the Ministry of Health to provide the medical profession with the best and most modern apparatus of medicine and to enable them freely to use it, in accordance with their training, for the benefit of the people of the country. Every doctor must be free to use that apparatus without interference from secular organizations. The individual citizen must be free to choose his doctor and the doctor must be able to treat his patient in conditions of inviolable privacy. I look upon the general practitioner as the most important man in the medical profession, but I hope—and I trust this will not be regarded as tendentious—that we shall be able to organize a service which will take general practitioners away from the isolation in which at present many of them live and work, and that more group associations will be organized amongst them."

Long Discussions

It would be necessary to have very lengthy discussions with the medical profession. He would say this without any desire to be controversial, that he hoped the general body of doctors would turn up at the meetings of their own organizations, and not allow their spokesmen to speak for silent thousands. The generality of the profession should attend the meetings of their associations and make their point of view quite clear, so that when the leaders of the B.M.A. met him they would speak for a united profession.

He knew that there were doctors who felt that with a State medical service they were likely to be too much under the control of a bureaucracy.

"After all—I need not remind you of this—I am a Socialist, and, being a Socialist, I believe in industrial democracy; and because I believe in industrial democracy I believe that doctors as a profession must have a greater and greater say in the management of their own services. I want for the miners, the railwaymen, the engineers, a far greater share in the management of their work and the policies that govern it, and I claim no less for the doctors. The doctors themselves must have a recognized status in the new service. Therefore I hope they will not come and meet me as if I were an antagonist on the other side of the table; on the contrary, I am one whose enthusiasm for democratic medicine is as great as their own.

"At the same time we are going to do some unorthodox things—a good many unorthodox things. Whatever reputation I have managed to achieve, it has not been a reputation for orthodoxy. Undoubtedly we shall try a number of experiments, but in such experiments I hope to obtain the enthusiastic co-operation of the profession. There is something seriously wrong with the health service of Great Britain when free treatment is given to the insured person, and the members of his family are left to find treatment as they can. I should have thought—indeed I am convinced—that this job of organizing a good medical and hospital service for all the people of Great Britain will inspire the idealism of all worth-while members of the profession."

After an allusion to difficulties, especially the difficulty arising from shortage of hospital nursing and domestic staff, which, he said, "haunted" the Ministry of Health, Mr. Bevan concluded by saying that he knew he would not succeed in his task by the adoption of any bullying methods.

"I have to meet doctors across the table and try to break down their suspicions, but I am satisfied that before another year is over we shall be able to lay before the people a structure of medical and hospital services which will make Great Britain the envy of all other countries in the world. I hope that you will all try to dissipate the atmosphere which has been created during the last few months by the suggestion that the new Minister is going to come into head-on collision with members of the medical profession. No such thing. We are going to show that there exists amongst us a fund of knowledge and good will upon which we shall be able to call in order to provide the people with a medical service of which we shall all be proud."

A Fully Co-operative Profession

Dr. Charles Hill, Secretary of the British Medical Association, replying to a later toast, said that Mr. Bevan's human and reassuring speech must have given great pleasure to the members of the medical profession there assembled. It would, of course, be idle to pretend that the announcement of Mr. Bevan's appointment as Minister of Health raised in the collective medical breast a confident expectation that the next few months would be a placid time. The south-west wind would blow, bringing with it cloud and rain and short bursts of sunshine. When he first read of Mr. Bevan's appointment his small daughter asked him whether he were pleased about it; he paused before replying, and, strangely enough, the line of a hymn came into his mind, "God moves in a mysterious way His wonders to perform"! Of one thing they could be sure, that they had in the Minister a man of energy, drive, and vision, and they would be ready and pleased to meet him in discussion of the problems they all had at heart.

When Mr. Bevan met the doctors he would find a group of men no less earnest than himself for the good health of the people. As a profession they had been subject to a good deal of criticism. It had become fashionable to regard individual doctors with love and respect and doctors collectively as a reactionary crowd opposed to the best public interest. They would soon, he hoped, be able to convince yet another Minister that the profession had the fullest intention and desire to co-operate in obtaining the best possible health service. He agreed that it was important to secure the widest possible expression of opinion from the profession, and he hoped that the time-table might be so arranged that it would be possible to speak for that one-third of the profession still serving in H.M. Forces. It had been found a matter of some difficulty to represent fully the views of the profession when so large a proportion—a larger proportion than in any other section of the community—was away on service. Mr. Bevan would not find in the profession a spirit of suspicion, but a cordial desire to discuss the matters at issue.

"We do not, in the main, believe that the best public interest will be served by the translation of an independent profession into a branch of central or local government. We shall seek to maintain the integrity and intellectual freedom of our profession. We shall attach ourselves to fundamental principles, and a master of penetrating criticism like the present Minister will not fail to assess the real value of the criticism we shall bring forward. I speak for the profession in wishing him, not godspeed, for that might be misunderstood, but good luck in the immensely difficult task which he will face in years to come."

Psychiatry and General Medicine

Replies to the toast of "The Guests" were also made by Dr. G. Krause (Holland) and Dr. Noel Péron (France). Sir Alfred Webb-Johnson, President of the Royal College of Surgeons, in proposing the health of the Royal Medico-Psychological Association, confessed his long personal interest in psychiatry, and said how proud he was of the fact that when he was Dean of the Middlesex Hospital he was able to arrange a psychiatric out-patient clinic and beds for psychiatric patients. He was convinced that association with a general hospital rather than with a special hospital for mental disorders was the right method of approach in dealing with the early stages of mental disease. He begged the members of the specialty not to become isolated from the general body of medicine and surgery, but to maintain their links with the Royal Colleges and with the British Medical Association, and to insist that those desiring to specialize should first have a sound training and experience in general medicine. Dr. Gordon Masefield, retiring honorary secretary of the association, responded to the toast, and pleaded for an amendment of sect. 5 of the Mental Treatment Act. Temporary treatment, he said, had proved its worth, but only for a very small proportion of mental patients. It was hedged about with so many restrictions that it could not fulfil the purpose hoped for it. If it could be extended so that a medical man in charge of mental patients was trusted still further and had all patients who were non-voluntary on a temporary basis, doing away with the certification stigma, for the first six months, he believed they would really be making progress.

MEDICAL STUDENTS AND THE HEALTH SERVICE PROPOSALS

Medical students have been discussing the Government's proposed National Health Service since the summer of 1944 at meetings in their own medical schools and at regional delegate meetings. A questionary on the subject was distributed to every school (*Supplement*, Aug. 19, 1944, p. 40), and the Minister of Health spoke and answered questions on it at the annual general meeting last November. The British Medical Students' Association has issued the following statement of its views, pointing out first that the Association's membership represents 93% of British medical students.

"We are in favour of a National Health Service based on the health centre as its fundamental unit.

"We agree with the Government's proposal for central administration: responsibility shall rest with the Minister of Health, together with the Central Medical Board, an executive body mainly medical and appointed by the Minister. Such an arrangement is necessary to ensure a national cohesion in planning. We consider it equally necessary that the Central Health Services Council, elected by the profession as an advisory body, should be free to publish its reports and recommendations. This principle, we believe, should be applied at every level; while the service is administered by elected representatives of the public as well as by professional men, and ultimate responsibility rests with Parliament and the municipal authorities, there should be independent advisory bodies of professional people free to publish their advice.

"We consider that a scheme to provide the country with health centres should be started without delay, the first centres being placed in areas where there is at present a shortage of doctors. It will be impossible immediately to build all the health centres that are needed, as indeed it may be difficult to find the doctors to staff them, but a beginning should be made with the doctors willing and able to enter the service. Where centres cannot be built, they should be set up in previously existing buildings. The fact that it is impossible to build them all immediately need be no disadvantage. This is of necessity an experimental period, and provided we lose no time in starting the experiment, the experience gained should ensure that mistakes are avoided when permanent health centres can be built. Consideration should be given to the experience of countries—e.g., Scandinavia and South Africa—where health centres exist.

"There must be no compulsion for either doctor or patient to enter the service, and private practice must therefore be allowed to continue, and with it the buying and selling of practices. There can be no question of buying and selling practices in health centres. The team of doctors working in a health centre and having at their disposal the increased facilities provided out of public funds must be in the public service. We favour payment of salary plus capitation fee.

"We are not unaware of the difficulties involved, chief among which would appear to be the impingement of a National Health Service on private practice, but we fail to see that postponement of the problem in any way alleviates the position. We would point out that many young doctors coming out of the Forces have never been in private practice and would want to enter the service, whereas if, on the other hand, no such service exists, they will be compelled to embark on private practice, and the problem of subsequently establishing a public service with the number of private practitioners thus reinforced would become even more formidable. The setting up of the first health centres where there is at present a shortage of doctors will fulfil a real need and necessitate no drastic readjustment in private practice. Such a proposal involves the direction of doctors who have chosen to enter the service to the places where they are most needed, and this we consider reasonable.

"We recognize that more can be done to improve the health of the nation by raising the standard of housing, nutrition, and conditions of work than by purely medical means. Nevertheless medical reforms should not wait upon more general changes."

HEARD AT HEADQUARTERS

Minister's Inaugural

The new Minister of Health in his first speech announced himself as unorthodox. He was right. Not one of his 13 predecessors had begun by remarking, as Mr. Aneurin Bevan did, that his permanent officials had prepared three separate speeches for him for the occasion—there they were, on the table in front of him, beautifully typewritten—but that he would have none of them. He said that such indiscretions as he might make would be his own. Thereupon Mr. Bevan spoke without a note for nearly half an hour—one of the most candid, disarming, and engaging speeches we have ever listened to from a Minister. Could this really be the stormy figure from Ebbw Vale? Of course the speech (reported on another page) was in terms of generalities, but it had its flashes of insight, more than a touch of eloquence, and abundant confidence. "I believe myself to be a good doctor," he said; "I have got a therapy—that is the word, isn't it?" He promised that within a year a structure of medical and hospital services would be laid before the people which will make Great Britain the envy of the world. He also spoke confidently of having five years at his job. The average tenure of Ministers of Health since Dr. (now Lord) Addison first took on the job in 1919 has been just over two years. The only Minister who held the portfolio for five years was Mr. Neville Chamberlain, and his tenure of the office was broken into three periods, under different Governments.

A Gleam in the Eye

One point on which Mr. Aneurin Bevan seems unduly apprehensive is lest he should be regarded as antagonistic to the medical profession. He was at pains to assure his audience more than once that quite the contrary was the case. He said that on meeting Dr. Charles Hill on that occasion he had detected a certain gleam in his eye. Dr. Hill, when it came to his turn to speak, explained that the gleam in his eye on meeting Mr. Bevan was not a sign of belligerency; nor, on the other hand, he was bound to admit, did it betoken inordinate affection. It was in fact the gleam of relief. Five minutes earlier, on arriving at the hall where the meeting was held, Dr. Hill had found that he was being treated with unusual deference, and then discovered, to his horror, that he was being mistaken for the Minister of Health himself!

Social Conscience

The Secretary of the B.M.A. has done well to refer in public to what has become known, thanks to enterprising reporters, as the "Beveridge incident." Many people continue to express various degrees of surprise and disapprobation at the action of the representatives at the A.R.M. in cheering the announcement of the defeat of Sir William Beveridge at Berwick. The circumstances seemed to give point to one of Low's recent cartoons in which the B.M.A. is depicted as a corpulent patient being examined by a doctor who says, "Don't worry, you will not die from enlargement of the social conscience."

The facts about the Beveridge episode ought to be told. The General Election results were being announced from the platform of the A.R.M., and at the end came a list of eminent politicians who had lost their seats. The final name was that of Sir William Beveridge, and at the end of the reading of the list there was an audible expression of astonishment not unmingled with dismay. It is true that from a very tiny section of the meeting there was a feeble cheer. So small a minority was concerned that had it been occasioned by anything else the cheer would not have been noticed, hardly heard. But it was enough to furnish headlines in the Press that the doctors had cheered the defeat of the architect—or should it be quantity surveyor?—of social security. It was an instance of that kind of misrepresentation in which there is enough fact to give a faint colouring of the genuine article. Whatever their views on policy, the members of the medical profession have a closer acquaintance than most with the effects of poverty and economic insecurity as affecting the health and happiness of the community, and are the last to welcome the fall of any who seriously labour to redress them.

Electing the I.A.C.

The election of direct representatives on the Insurance Acts Committee is taking place this month, the latest date for nominations being Sept. 24, and if there is a contest in any of the territorial groups the voting papers will be posted on Oct. 11. These representatives are elected from the different areas by the members of the Local Medical and Panel Committees in each area. The grouping of areas resembles, but is not the same as, the grouping of Branches for election to Council. There are 21 groups, of which Scotland has 4, Wales 2, and Northern Ireland 1, leaving 14 for England. Thus what is sometimes called the Celtic fringe is over-represented at the expense of the predominant partner, which, on the basis of doctor-population, should have 16 of the groups. The predominant partner has not been heard to complain about this, but there has been criticism of the arrangement of the English groups, though (the facts of geography being as stubborn as they are) no strictly equitable system seems possible.

The voters in this election are the individual members of the Local Medical and Panel Committees, and each vote carries a value equal to the number of insurance practitioners in the area divided by the number of members of the committee. Thus in an area with 300 practitioners and a committee of 10, the value of each vote will be 30. Which seems about as fair a method as can be devised.

Where Every Prospect Pleases

In one of the medical journals from over-seas an advertisement of a medical appointment in the Dickoya district of Ceylon holds out the prospect to a medical practitioner with experience in medicine, surgery, and gynaecology of an assured income of upwards of £4,000 a year. This sum, it is stated, was earned by the previous incumbent in the medical service there. As if that were not sufficient attraction, it is added that the Dickoya district lies 4,000 ft. above sea level and can claim the best climate in the world.

Close Sittings

The central Council of the B.M.A. sets a good example of hard work, its members travelling from all parts of the country for a long day's meeting, but some of its daughters overseas appear to be even more strenuous. I have just received 45 closely typed foolscap pages of minutes of a recent meeting of the Federal Council of the British Medical Association in Australia. The meeting began at 2 o'clock in the afternoon of Monday, and adjourned at 10 at night until 9.30 on Tuesday morning, going on until 6 in the evening, then reassembling at 9.30 on Wednesday and continuing until 10 at night, and resuming at 9.30 on Thursday until a closing hour not stated. The twelve members represented all the six States, and except the two from Victoria they must have travelled to Melbourne many hundreds of miles.

"Free Medicines" in Australia

The medical profession in Australia has been much exercised over the Pharmaceutical Benefit Act, which has inaugurated a "free medicine" scheme by the Government. The objection of the profession is that the only medicines which are "free" are those included in the list or formulary which the Government has issued; on the other hand, if a doctor prescribes for his patient a special medicine which he considers necessary for the particular case the patient has to pay for it in full. A statement has been issued for exhibition in doctors' waiting-rooms throughout Australia informing patients of the true meaning of the measure, and pointing out that "no self-respecting doctor would allow a decision as to what medicine his patient should or should not have to be taken out of his hands by Government officials. "It is this glaring injustice to yourself as a member of the public," the notice goes on, "which the medical profession is seeking to rectify. If and when the Government produces a scheme under which *all* medicines will be free, the doctors will be prepared to reconsider the position. In the meanwhile we ask for your support in the stand we have taken." The Federal Council of the B.M.A. at its last meeting resolved to make a further approach to the Commonwealth Government requesting the removal or amendment of those features of the Act which are objected to by the profession.

Dr. Haden Guest is chairman of the Medical Personnel (Priority) Committee in succession to Sir Geoffrey Shakespeare.

Correspondence

Medical Demobilization

SIR,—Among the many letters on this subject I have been surprised to see no recognition of the "medical bottleneck" as a factor in delaying demobilization of the Forces in general and of medical officers in particular. Since the group release scheme began to operate the numbers falling to be discharged daily has rapidly increased, and though no actual figures have yet been published it may be estimated that a goal of 10,000 to 15,000 discharges daily is being approached.

Each of these men is receiving a medical examination, recorded on a form A.F.B. 3149, the equivalent of a life assurance company's medical report on a proposal for insurance. (Incidentally a life assurance company would pay a fee of one or two guineas, and a practitioner would spend 40 to 60 minutes in earning that fee. To the R.A.M.C. officer it is just another chore.)

Medical officers vary in the speed with which they complete these examinations, but experience at a centre staffed by several M.O.s has shown that on the average 15 to 20 minutes are required to do the work adequately, and much longer to do it thoroughly. Now simple arithmetic shows that 15,000 times 20 minutes means 5,000 man-hours of medical work to be done each day, or rather more than 800 doctors employed full-time on this task alone. Even now there are not 800 surplus medical officers available for this employment, and as demobilization procedes the "bottleneck" will become ever more constricted.

Twenty-seven per cent. of medical officers, but only 10% of the Army, are in the first 20 age-and-service groups: if 27% of M.O.s are discharged with their groups 63% will be left to provide medical service for 90% of the Army. Whence, then, will the surplus M.O.s be found for this task of examination on discharge? In the circumstances can anything better than the "vague statements" of which your correspondents complain be expected? It is pleasant to read the forecasts for release of the age-and-service groups published in the daily press: for my part I remain sceptical.—I am, etc.,

"GROUP 20."

Release of Doctors

SIR,—The Central Medical War Committee has issued yet a further list of demobilization groups for medical officers in the R.A.F. This time it is Groups 11 to 14 in October, which still leaves the demobilization of doctors far behind any other Service trade.

Thanks to the British Medical Association, many appointments are now advertised long before they will be required to be filled, to enable serving medical officers in any theatre to apply. But how can we in the slightly higher demobilization groups apply for these posts when we have no idea when we can reasonably expect to be released from harness? Surely the C.M.W.C. has by now formed its plan for our demobilization. Then why will it not issue in advance the expected dates of demobilization of the higher groups? We in the Forces would be very grateful if they would. Obviously they cannot announce it in the lay press, but I see no reason why the information could not be passed to us through the medium of the medical journals, or even by a personal letter from the B.M.A. to all doctors in the Forces, in the same way as it did when the White Paper on a National Health Service was under discussion.

We are broad-minded and far-seeing enough to realize that any dates given far in advance could only prove very approximate, and be liable to some alterations, but it would relieve the mental tension at present being forced upon us by the mysterious silence of the C.M.W.C. It would give us some approximate idea when we might reasonably expect to return to civilian life; and then those of us who so desired would know which of the advertised posts we could apply for with a reasonable hope of being free to accept if successful.—I am, etc.,

"Higher Demob."

⁂ The Secretary of the Central Medical War Committee writes: The "plan" for demobilization is made by the Government, *not* the C.M.W.C. The B.M.A. is pressing for expedited demobilization and the announcement of a long-term plan.

Reallocation and Release

Sir,—Allow me to add my moan to that of others on the subject of reallocation of medical officers in the Forces. From recent announcements there is little doubt that the release of medical officers will be allowed to lag very much behind the releases in the vast majority of other branches. The gross unfairness of this situation does not need stressing. I am convinced not only that this is unnecessary and undesirable but that were the problem tackled properly medical officers could be released in higher age-service groups than could the majority of officers in other branches.

I deliberately refrain from speaking about other relevant factors connected with this subject; I confine myself to the equity of it. I shall, however, try to speak for others who have given reasonably long service in this war. We view the present state of affairs with despondency and almost without hope. The B.M.A. is our only mouthpiece and refuge, but to date its efforts have been unavailing. Lest, however, we should continue to be indefinitely members of a Service where soon there will be one medical officer for every 100 personnel, I write this but withhold my name and simply sign myself,

"Sixth-year R.A.F. M.O."

Slow Release

Sir,—You have recently published several letters in the *Supplement* on the subject of the disadvantageous position of Naval medical officers in the "demobilization stakes." This is further underlined by the announcement in this week's *B.M.J.* that the Army hope to release M.O.s up to Group 16 by mid-October. The best that the Navy can offer is the demobilization of Group 7 by a similar date and, so far, only a handful of elderly retired "regulars" have actually been released.

The situation is unjust and intolerable, and I hope that you will find space to publish this and other letters on the same subject in order that this justifiable grievance may be ventilated. The remedy is simple; (1) direction of all non-specialist entries into the Navy; (2) transfer of junior Army M.O.s to the Navy; (3) ruthless pruning in the medical staffs of ships and establishments; and (4) a revision of the ancient Navy superstition that it is necessary to have a fully qualified medical practitioner in the near vicinity whenever anybody has to move an object weighing more than five pounds!

Those of us who have been serving for nearly six years are downhearted indeed when we see our contemporaries in the Army returning to civilian life whilst we "soldier on" without anyone appearing to be interested in our fate. Will the C.M.W.C. please let us know what, if anything, is being done about it.—I am, etc.,

"S.M.O."

⁂ The Secretary of the Central Medical War Committee writes: The C.M.W.C. entirely sympathizes with the complaints regarding the slow rate of release. It has taken the matter up with the Government and is pressing for Government decisions on this and other release problems. The Committee is of course most willing to adjust its recruitment programme in any way that may be necessary to facilitate a fair plan of release of medical officers from the three Services. It has no authority to determine the plan, this being the responsibility of the Government

Waiting for Release

Sir,—The weeks pass and still Service medical officers are given no concrete information concerning their release from the Services. The weeks pass and the pile of letters expressing concern and dissatisfaction increase in the files of your *Journal*. These apparently have no effect, yet all that is being demanded is information, so that men may make some sort of arrangements for the future. There is no shadow of excuse for this.

It is clear that the three Services know their immediate commitments, for they have all published their release programme up to January, 1946. It is true that up to three weeks ago actual medical release was running concurrently with general release in the Army, but no official assurance has been forthcoming that this will continue. Even this has been managed with the maximum of uncertainty. There was a halt at Group 11, then a hurried release for Groups 12 and 13, followed by a quick warning to Groups 15 and 16, by which time general release group 18 had been warned, so that again medical release was lagging behind.

High-ranking visiting officers can only say that they hope that medical release will keep parallel with general release, but apparently no one is empowered to say that it will.

The Central Medical War Committee send us letters of sympathy and maintain that they also are without information. The C.M.W.C. is the body entrusted with the allocation of medical man-power; if they are unable to carry out their function by reason of lack of co-operation from the Government then they should at once resign. Should they have the courage and honesty to take this course I have no doubt that this melancholy muddle would soon be given the attention it deserves.—I am, etc.,

"Major, R.A.M.C."

British Army of the Rhine.

Colonial Medical Service

Sir,—"Old Soldier's" letter (*Supplement*, Aug. 25, p. 50) will interest many. An entrant to the Colonial Service with more postgraduate experience than the minimum necessary to secure appointment loses by just that much in salary, seniority, and pension without any compensation other than the personal satisfaction of being better equipped for his work. Men in their thirties would start at the bottom of the salary scale, be subordinate to younger men, have no chance of promotion, and not serve long enough to earn an adequate pension.

In the years 1925–9 there was a large influx (West African Service) of men who qualified in 1924–5. Of those who joined in 1925–6 very soon after qualification all who remain in the service are now S.M.O.s or higher, and are "blocking" the promotion of those who spent two or more years acquiring further postgraduate experience and joined in 1927 or later. Thus those who "responded" to the Colonial Office appeal, most of them young and inexperienced, and so escaped military service, will have a great advantage over the old soldiers.

I suggest to "Old Soldier" that, if he wishes to work over-seas, service with a mine or other commercial undertaking offers greater attractions. His age and experience would be appreciated, and remunerated accordingly; and he would be regarded and treated as a valuable member of the organization, not (the most irksome feature of most public services) merely as a subordinate official.—I am, etc.,

G. L. Alexander,
Colonial Medical Service.

Clifton.

Release of Students

Sir,—I should be grateful for an opportunity to voice my support of Dr. James Melvin's letter (*Supplement*, Aug. 25, p. 51) in which he appealed for the release of medical students from the Services. I know personally four medical and dental students who have: (1) been classified as unfit for the duties for which they entered their respective Services: (2) already been promised admission by their medical schools if only they can obtain their discharges by this October; and (3) have an average of four years' service each. Although the release of 1,500 theological students has been arranged, it appears that not a single fit medical student will be able to return to school from the Services this October.—I am, etc.,

London, S.W.1. John Ball.

Replacement and Indispensability

Sir,—On very high authority (Lord Moran's party which made a tour of the B.L.A. not so many months since) we were given to understand one of the causes (we of the B.L.A. concluded the *main* cause) of the delay in releasing doctors from the Services was the insurmountable difficulty of "replacement"; it was alleged that while nearly every mother's son of them was struggling might and main to serve in the Royal Navy, the Army, or the R.A.F. the young specialists (and others) could not leave the teaching and E.M.S. hospitals, etc., because they were indispensable.

Needless to say, this assertion caused amazement—and, among some, derision.

For my part I cannot recognize "indispensability." A man is indispensable only to himself alone—and "there are as good fish in the sea . . .": a Stalin replaces a Lenin, a Truman a Roosevelt, and an Attlee a Churchill, and yet the world goes forward. Nor can I believe that all these teachers, lecturers, etc., are so inspired and inspiring or have such transcending gifts that they could not be replaced reasonably adequately by other men. Such, at least, is my observation after my three decades in the medical business.—I am, etc.,

Coulsdon. "VETERAN."

In and Out

SIR,—Now that the excitement of VE and VJ Day has ended and we are faced with the realities of rehabilitation, the moment has arrived when Service medical officers require definite mobilization and demobilization figures to be issued by the Central Medical War Committee every month.

We have been informed in the R.A.F. that Group 10 is to be released by the end of September. The fact that only ten groups of medical officers are to be released up to this period is not fully understood, when the following factors are taken into consideration: (1) Non-active-service conditions; (2) the huge reduction of Dominion and Colonial personnel in this country; (3) large numbers of Class B releases, and releases of married W.A.A.F. The only conclusions one can draw are that there have been a large number of Class B releases from the medical service, or that the medical service is over-established. The fact that release medical examinations have to be carried out is not sufficient justification for the retention of large numbers of medical officers.

A considerable number of Service medical officers have sacrificed their professional knowledge, financial standing, and family life, and are in no mood at this stage to be "toyed with" by those wishing to cling to "establishments." It is the duty of the C.M.W.C. to look after the interests of the serving M.O. in this respect, and not to be dictated to by those in control of Service medical organization. It is obvious that those in control of Service medicine do not wish to lose doctors—nature is only human, more particularly if it strikes at a loss of income due to reduction of establishment.

The answer to the whole problem of medical demobilization is simplified by the fact that a doctor is a doctor whether he be in civilian clothes or in uniform. Hence mobilization of those doctors under 40 for service is not too much to demand. This could easily be arranged by the Local Medical War Committees—the mobilized practitioner being replaced by a demobilized practitioner from the same area. What a heaven-sent opportunity for those who have worked so hard for so much money to replace those who have worked so little for such a little money!—I am, etc.,

"FL. LIEUT., R.A.F.V.R."

Professional Secrecy

SIR,—Having recently been reading about the new proposals for the better ordering of things medical, it occurs to me that some of them are likely to come up against the Hippocratic Oath sooner or later. Personally I have always taken this old-fashioned obligation seriously, and still do. Consequently I have been up against it inconveniently on occasions. It may interest some of your readers to know how I managed.

For a good many years I practised in a town where there was a relatively large body of civil servants; a number of these were patients of mine. At the end of the first visit it was customary to hand the doctor a form to be filled up and signed. Among the statements demanded by the form was "Diagnosis." I well remember the first time that this produced an acute difficulty. I had filled in the space with "Early phthisis." My patient remarked, "But, Doctor, this will ruin my career in the Civil Service." I took the signed form back and tore it up.

Fortunately, anticipating trouble, I had already taken some steps. These were to interview three or four of the "top-row" civil servants and explain that I intended to fill in such forms as it suited myself and my patients, irrespective of the reality of the case. I asked that my intentions should be communicated to others of the "top-row" concerned. Neither then, nor at any time during the years I practised in that town, was there ever any protest as to my methods. I forget now what the substitute diagnosis was. It may have been "Dysentery."—I am, etc.,

J. F. R. GAIRDNER.

National Health Service

SIR,—It would appear that a fresh start must now be made with the negotiations regarding the proposed National Health Service. It therefore seems opportune that attention be directed once more to the fact that the Negotiating Body is not representative of our profession. It would, I think, be accurate to say that none of its members is under 40 and few, if any, under 50. There is also, so far as I am aware, nobody at all to speak for the 13,000 doctors who are or have been serving with the armed Forces. I submit that this omission should be corrected forthwith. It is, moreover, of particular importance now that we have to deal with a Minister who is himself young—younger in fact than many who have worn the King's uniform.—I am, etc.,

E. A. GERRARD,
Surg. Cmdr., R.N.V.R.

Terms of Full-time Salaried Service

SIR,—Views concerning conditions of service and remuneration for doctors are of interest to the profession, but it is obvious that these views may vary with the individual doctor. In my judgment the majority of doctors outside those already in full-time employment would prefer to be as they are at present because they fear: (1) a drastic cut in their remuneration; (2) bureaucratic control.

While the present N.H.I. conditions of service are irksome to many, men who feel that they are not adequately remunerated, the fact remains that these same men would prefer remaining in the frying-pan rather than be made to jump into the fire. On the other hand the advocates of a complete full-time salaried national medical service are of opinion that: (1) the conditions for the doctor will be better; and (2) the services obtainable by the public much improved. With regard to the above two points there is a sharp cleavage of opinion, the reasons for which are well known and need not be reiterated.

From my own point of view I am content to allow matters to remain as they are for the simple reason that in my particular case I am satisfied. This does not mean that things cannot be improved; obviously improvement is necessary, judging from the various reports one hears in many directions. On the other hand I am equally agreeable to a national medical service on a full-time salaried basis provided the following considerations are met:

1. Adequate salary based on the number of years' service which a man has already given to the profession.
2. Compensation for the capital value of his practice, which he would normally expect to dispose of for a substantial premium on his retirement.
3. A fortnight's holiday per annum with pay and a locumtenent to be supplied by the service.
4. A fortnight's postgraduate work (this should be compulsory) at a recognized institution with pay and expenses. A locumtenent to be provided as above.
5. Adequate arrangements for illness; provision of locumtenent, etc.
6. Pensions at 65, when the practitioner will retire from the service. (With the present number of doctors available I am told that 65 will be too young an age to retire any doctor; but a doctor should be permitted to retire at 65 if he so desires. If he does not retire at 65 he carries on as before, but cannot claim his pension until he does retire.)
7. Conditions of work should provide for definite hours of duty and definite off-duty time—i.e., there should be a rota arrangement in the district to which the doctor belongs, probably worked through a health centre.
8. At death there must be some provision by way of a pension for his widow.

I think that if a national service can give us these advantages a doctor would be willing to sacrifice a considerable portion of his present income in exchange.

But in spite of all that has been said there is still one aspect of the business that makes one somewhat cautious about accepting a new national service. I refer to the control of the profession. By whom are we to be controlled? There are so many serious objections to the local doctors of the town being under the control of the local councillors of the town that I can well understand the fierce antagonism of the medical profession to a procedure which, I believe, is part of the Labour Party's policy; which brings me to my final point. The Labour Party are in complete power with an absolute majority and they have already published their "National Service for Health," and, presumably, they will put this into practice. Assuming that the medical profession cannot swallow the whole of this policy, are the doctors prepared to fight as an organized compact body against the Government?—I am, etc.,

"TWENTY-FIVE YEARS' SERVICE."

The Medical Situation in India

SIR,—I should be obliged if you would allow me to reply to Lieut.-Col. C. J. Lodge Patch (*Supplement*, Aug. 18, p. 47), for whose humanitarian work at the Lahore Mental Hospital I have nothing but admiration, although I have no personal knowledge of that institution. He falls into the same psychological error into which many retired I.M.S. men, after their periods of valued service in India, fall when commenting on matters Indian. They adopt the easy path of recrimination instead of that of reconstruction.

In a large country like India, with, moreover, a long and continuous history of culture, a modern European, himself accustomed to small and excessively uniform States, will find much that appears out of date and bizarre. Further, the Indian social system is entirely different from the modern European without being necessarily inferior. If it were a precondition of progress to obliterate the past at one blow the outlook for progress would in any country be very pessimistic. The only way compatible with freedom (the democratic way) is gradually to replace the past so that it is no longer necessary.

Whether the Indian people should take the opinion of a British Commission to be final once and for all as to the standard of university medical education in India is a matter of opinion; although—in view of the fact that this education has until lately been largely controlled by British teachers (mainly recruited from the I.M.S.) the stressing of such an opinion appears a little surprising, and the blame, if any, must be shared by the British teachers themselves. In any case, no one can say —and in this I can speak from considerable experience of general practice here —that the standard of skill shown in general practice in India is lower than in this country. The main difficulty there, as Col. Lodge Patch points out, and as I did in my letter, is personnel, particularly in the rural districts. The vast majority of the poor people who attend the practitioners of old-fashioned systems do so because they either cannot find a doctor or cannot afford one. Once an extended general-practitioner and hospital service has been established the older systems will automatically disappear. This is the way of reconstruction. The example of Russia shows that once a Government is determined to carry out such a plan it can be done comparatively quickly. It is not fair to put down to prejudice or ignorance what is in reality due to lack of capital and central planning.

Not only is the extreme aptitude for science of the Indian intelligentzia well recognized, but the easy adaptability of the Indian peasant to modern conditions is also a fact of common observation. Ask those who have charge of the modern Indian armies, recruited largely as they are from among the peasants, of the ease with which they hold their own, with modern weapons, in any part of the world, East or West. Does anyone believe that the Indian peasant, with the alternatives clearly available before him at equal cost, would prefer the bullock-cart to the motor-car or the railway, the plough to the tractor, or the old-fashioned "hakim" or "ved" to the modern doctor?

The joke at the end of Col. Lodge Patch's letter about the Punjab Government wishing to commandeer and thus (according to him "appropriately") admit themselves to the mental hospital which he helped to build, and his reference to "an obtuse and obstructive Indian Government," appear to be in doubtful taste at the end of a war in which this same Government, of all the Indian Governments, sustained most consistently and vigorously the Indian war effort, and sent the sons of Punjab to fight for Britain (and, one hopes, for freedom) in every theatre of the war. This Government was referred to only the other day by the Viceroy, during the recent political conference, as the model on which he hoped the other Provinces would build up theirs. Incidentally, Col. Lodge Patch is in error in calling Punjab a "Muslim Province," as the followers of this religion form only half the population, the Government being a Coalition.

Neither the Indian Governments nor the Indian people are in general either "obtuse" or "obstructive," and I.M.S. men who served India well in their younger days can continue the good work on retirement by helping with proposals for reconstruction. The joint authors (Indian industrialists) of *A Plan of Economic Development for India* (now available in the Penguin series) have made a business-like analysis of the medical situation, and have estimated the *cost* of the minimum requirements of the medical services, which everyone knows is the crux of the matter.—I am, etc.,

Rasheed Ahmad, M.R.C.S., L.R.C.P.
Dagenham, Essex.

Doctors' Car Repairs

Sir,—Having seen the footnote to Dr. Richardson Billings's letter (*Supplement*, Sept. 1, p. 56), I think my experience of the working of the scheme to expedite repairs to doctors' cars should be known. In March this year I had to have my car rebored and the crankshaft ground. As the firm doing the work could not obtain new pistons, I applied to the Ministry of War Transport. On *Aug. 29* I received a postcard to say the Ministry had advised that the parts had been sent on *June 23* to a London firm through whom my garage had applied for pistons. On that day (Aug. 29) the firm had still not received the parts. Fortunately I had been able to obtain pistons through a patient in the meanwhile or I should still be without my car. A note at the bottom of the postcard says that in case of delay I should apply again to the Regional Officer!—I am, etc.,

G. Humphry Ward.

A Disclaimer

We have received a letter from Lieut.-Col. H. H. Broome, C.I.E., F.R.C.S., I.M.S.(ret.) disclaiming the story attributed to him in the *Supplement* of Aug. 18 (p. 47) and expressing much concern that his name should have been associated with it because it might offend his many Indian friends.

H.M. Forces Appointments

ROYAL ARMY MEDICAL CORPS

Lieut.-Col. J. M. MacKenzie, C.B.E., M.C. having attained the age for retirement, is retained on the Active List, supernumerary.

Major (War Subs. Lieut.-Col.) J. E. Rea to be Lieut.-Col. (Substituted for the notification in a *Supplement* to the *London Gazette* dated July 31.)

Major G. T. L. Archer to be Lieut.-Col.

Major H. L. Mann has relinquished his commission, and has been granted the honorary rank of Lieut.-Col.

LAND FORCES: EMERGENCY COMMISSIONS

Royal Army Medical Corps

War Subs. Capts. I. C. Middleton and J. N. Swainston have relinquished their commissions on account of disability, and have been granted the honorary rank of Major.

War Subs. Capt. P. J. Waddington has relinquished his commission on account of disability, and has been granted the honorary rank of Capt.

To be Lieuts.: P. Allebone, M. K. Alexander, J. T. D. Allen, T. J. Boag, J. W. Bullimore, J. P. Carri, B. Cashman, M. D. Cremin, G. G. Doel, E. D. Edmondson, I.-J. C. Frew, H. L. Harris, C. R. Helsby, J. Herd, J. D. Holdsworth, D. R. Humphreys, L. Jacobs, J. B. Jeffries, H. A. Jones, R. Kean, M. V. Kramer, L. W. A. Lankester, M. W. Leivers, A. H. R. Muir, J. P. Philp, H. H. Pilling, W. L. Sanders, J. V. Walker, A. G. Wolstenholme, S. R. Wood, and T. M. Wood-Robinson.

WOMEN'S FORCES

Employed with the R.A.M.C.

The following M.O.s have been granted commissions in the rank of Lieut.: Janet E. Bottomly, Mary D. G. Jones, and Margaret G. Thomson.

ROYAL AIR FORCE

Royal Air Force Volunteer Reserve

Fl. Lieuts. T. H. Whitsitt and H. Paterson have relinquished their commissions on account of medical unfitness for Air Force service, retaining their rank.

INDIAN MEDICAL SERVICE

Lieut.-Col. B. H. Singh, M.C., has retired from the Service.

POSTGRADUATE NEWS

The Fellowship of Medicine announces the following courses: (1) Revision course in anaesthetics, Oct. 8 to 20; demonstrations and/or lectures daily at various London hospitals. (2) Week-end course in diseases of children, all day, Sat. and Sun., Sept. 29 and 30. (3) Week-end course in rheumatic diseases, all day, Sat. and Sun., Oct. 20 and 21, at Rheumatic Unit, St. Stephen's Hospital, Fulham Road, S.W.

A course of instruction will open at the Middlesex Hospital Medical School on Nov. 5 for graduates intending to sit for the Primary F.R.C.S. examination. The candidates will be required to take the whole course, and will not be admitted to parts of it. Fee, 25 guineas.

A series of lectures on ophthalmology to be held in the Department of Ophthalmology of the University of Glasgow will commence on Sept. 19, at 8 p.m., and continue on Wednesdays until Oct. 24. Details of these lectures will be published in the Diary column of the *Supplement* week by week. A discussion follows each address, and the meetings are open to all medical practitioners and senior students interested in ophthalmology.

WEEKLY POSTGRADUATE DIARY

Glasgow University: Department of Ophthalmology.—*Wed.*, 8 p.m., Prof. W. J. B. Riddell: Synthetic Mydriatics.

B.M.A.: Branch and Division Meetings to be Held

Westminster and Holborn Division.—At Alhambra House, Charing Cross Road, W.C.: Thursday, Sept. 27, Meeting of the Executive Committee to follow meeting of Local Medical War Committee at 4 p.m.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTHS

Patey.—On Sept. 4, 1945, at Middlesex Hospital, W.1, to Jean (*née* Mason), F.R.C.S.Ed., and Squad. Ldr. John Patey, a son.

Thubron.—On Aug. 3, 1945, at Plymouth, to Marjorie (*née* Furze), wife of Surg. Lieut.-Cmdr. Thubron, R.N.V.R., a son.

MARRIAGES

Kearon—Edmond.—On Sept. 8, 1945, in London, Capt. Hubert V. Kearon to Meta Helen Edmond, M.B., Ch.B., widow of the late J. J. B. Edmond, Colonial Medical Service, and only child of Mr. and Mrs. Ernest Thomson of Edinburgh.

Whitney—Bannister.—On Aug. 30, 1945, at Chester, Rupert Underwood Whitney to Freda Bury Bannister.

DEATH

White.—On Aug. 27, 1945, Cresswell FitzHerbert White, M.B., C.M.Aberd. 1887, at Bury, Sussex, aged 84.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Mr. E. V. Oulton, at 21, Lansdowne Place, Hove, 2; Dr. C. S. D. Don, at 24a, St. John Street, Manchester, 3; Mr. C. J. Cellan-Jones, F.R.C.S.Ed., at c/o Dr. J. D. Robertson, 2, Uplands Crescent, Swansea.

Dr. E. L. Bartleman, late of 9, Old Burlington Street, London, W.1, will resume practice on Oct. 1, at 58, Portland Place, W.1.

BRITISH PHARMACEUTICAL CODEX 1934

Upwards of 1,000 monographs are included, covering the whole field of therapeutics. In addition to particulars regarding the source, the chemical and physical properties or botanical characters of the substance concerned, each monograph includes a section on action and uses compiled from the most authoritative information available. A separate formulary section contains formulæ for hundreds of preparations widely used in medicine. With the Supplements described below, the B.P.C. is an invaluable and indispensable source of reference.

PRICE **40s.** POST FREE

Supplements to B.P.C. 1934:

Dressings Supplement. Additions to the Surgical Dressings in Part II of the B.P.C. 1934 (June, 1940.) **Price 2s.** *Postage* 2d.
Second Supplement. Part III—Formulary. Additions and Amendments to the Formulæ in Part III of the B.P.C. 1934 (November, 1941.) **Price 2s. 6d.** *Postage* 2d.

Third Supplement. Part I—Monographs. Monographs additional to those in the B.P.C. 1934, and additions and corrections to the Trade Names. (February, 1942.) **Price 5s. 6d.** *Postage* 2d.

Fourth Supplement. Part I—Monographs. Amendments to the Monographs in the B.P.C. 1934. (May, 1942.) **Price 4s. 6d.** *Postage* 2d.

Fifth Supplement—Quinine Preparations and Cumulative Index. Amendments to the Formulary, together with additions and amendments to Monographs in Part I and Part II. (November, 1942.) **Price 2s. 6d.** *Postage* 2d.

Sixth Supplement. Additions and amendments to Parts I, II, III, including Monographs on Surgical Catgut. (January, 1944.) **Price 2s. 6d.** *Postage* 2d.

PRICE OF BRITISH PHARMACEUTICAL CODEX, 1934, COMPLETE WITH SIX SUPPLEMENTS

50s. POST FREE

Cost of the Six Supplements only, 19s. 6d. Postage 6d.

All Orders must be accompanied by Remittance.

GREATEST PROPERTY PROTECTION SCHEME EVER EVOLVED . . .

To-day, Property, Equipment and Stock are more valuable than ever. If lost, they cannot be replaced for a long time, during which period revenue is also lost, goodwill may go and capital appreciation and interest vanish. The Pyrene Company have, therefore, evolved a Hire Maintenance Plan which gives such assets the most thorough protection from the ravages of fire. The plan includes not only the provision of the best and most suitable Fire Extinguishers but twice a year inspection by experts, supply of spare parts, repairing, repainting and, when necessary, replacing; your staff may be trained in the proper use of fire appliances and Certificates are issued after inspection . . . all for an inclusive annual fee. In your own interest you should investigate this plan now!

Tavistock House South, Tavistock Square, London, W.C.I

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.
B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.
A—Whole-time resident house appointments open to practitioners without previous experience.
B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

HIS MAJESTY'S COLONIAL SERVICE. The Colonial Medical Service. Vacancies for MEDICAL OFFICERS. The maintenance of an efficient COLONIAL MEDICAL SERVICE constitutes a vital part of the national war effort, and it is most important that the Service should be assured of an adequate supply of doctors. The Secretary of State for the Colonies therefore invites applications from doctors possessing a medical qualification registrable in the United Kingdom who are British subjects and who are under 35 years of age. Medical officers are appointed in the first instance for general service, but there are ample opportunities for work in special branches of medicine and surgery, in public health, and in medical research. The normal salary scale is from £600 to between £1,000 to £1,120. There are large numbers of super-scale posts to which promotion is made on merit and which carry higher salaries. Government quarters, in many cases free of rent, and first-class passages to and from the Colonies are provided, and an adequate pension scheme is in force. Selected candidates are normally required to attend a course of instruction in Tropical Medicine and Hygiene, either before or after proceeding overseas or during their first period of leave. Further particulars, including the regulation governing admission to the Colonial Medical Service, may be obtained from the *Director of Recruitment (Colonial Service)*, 2, Park Street, London, W.1.

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with the Indian Medical Service for the duration of the war. Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a minimum period of 6¼ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office to whom all inquiries should be addressed

---

GOVERNMENT OF IRAQ.—The following staff is required by the Government of Iraq for the Royal College of Medicine, the Royal Hospital at Baghdad, and the larger institutes and hospitals in the Provinces: PROFESSORS of Clinical Surgery; Diseases of the Ear, Nose, and Throat; Surgery; Obstetrics and Gynaecology; Clinical Pathology; Clinical Ophthalmology; ASSOCIATE PROFESSOR of Medicine; SURGICAL SPECIALISTS (for the Provinces); DIRECTOR of the Parasitological Laboratory: SPECIALIST in Children's Diseases. Appointment will be for three years in the first instance, but a contract for a shorter period may be considered. Salary Iraq Dinars 150 a month, plus high cost-of-living allowance, at present I.D. 24 a month (I.D. 1 = £1). Free first-class passages and liberal leave on full salary. The posts are not pensionable, but there is a Provident Fund. Candidates should be Professors in possession of a professor's degree from a recognized college or alternatively specialists in their branch who have worked as such for not less than 8 years at a recognized college, institute or instructional hospital, or who have occupied a post of Assistant Professor at a recognized college for a similar period. Practitioners now serving in H.M. Forces may apply. Write, stating age and full particulars of qualifications and experience, to Overseas Manpower Committee, York House, Kingsway, London, W.C., before January 15, 1946.

CITY OF STOKE-ON-TRENT. CITY GENERAL HOSPITAL. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners (single, male or female), including R and W practitioners who now hold A posts, for the appointment of Assistant Resident Medical Officer (B2), at the City General Hospital, Stoke-on-Trent. If offered to an R or W practitioner the appointment will be limited to a period of six months, otherwise will be for a period of one year. The salary is at the rate of £250 per annum, plus bonus, with full residential emoluments. The Hospital, which is an Emergency Hospital, has approximately 1,200 beds, and there is excellent scope for medical, surgical, and obstetrical work.—Applications endorsed "Medical Officer, City General Hospital," to be sent to the undersigned immediately.—Harry Taylor, Town Clerk.

BRITISH POSTGRADUATE MEDICAL SCHOOL (University of London).—Applications are invited from registered medical practitioners, male and female, for the appointment of a HOUSE SURGEON (A) in Obstetrics and a HOUSE SURGEON (A) in Gynaecology, both becoming vacant on November 1, 1945. This includes practitioners liable to service under the National Service Acts who have not yet completed three months since date of qualification. The appointment is for six months. The salary is at the rate of £105 per annum, plus full residential emoluments.

Applications are also invited from registered medical practitioners, male and female, for the appointment of two HOUSE PHYSICIANS (A), both becoming vacant on November 1, 1945. This includes practitioners liable to service under the National Service Acts who have not yet completed three months since date of qualification. The appointment is for six months. The salary is at the rate of £105 per annum, plus full residential emoluments.

Apply, the Dean, British Postgraduate Medical School, Ducane Road, W.12, before September 29, 1945.

BOROUGH OF ILFORD. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH AND RESIDENT MEDICAL OFFICER at the Isolation Hospital and Sanatorium.—Applications are invited from qualified medical practitioners for the appointment of a Temporary Assistant Medical Officer of Health and Resident Medical Officer at the Borough Isolation Hospital and Sanatorium at a salary of £600 per annum, plus a bonus of £24 14s. per annum, with free board and residence at the Council's Isolation Hospital (valued at £100 per annum), for duties in connexion with the Isolation Hospital and general public health work as required. The consent of the Minister of Health has been obtained to the making of this temporary appointment. The person appointed will be required to work under the direction of the Medical Officer of Health, who is Medical Superintendent of the Hospital. Candidates who are already in whole-time Public Health employment by local authorities will not be eligible. The appointment will be subject to the provisions of the Local Government Superannuation Act, 1937, and to the staff regulations of the Council for the time being in force. The selected candidate will be required to pass a medical examination by and to the satisfaction of the Medical Officer of Health. The appointment will also be subject to one month's notice on either side. Applications stating age, qualifications, and experience, present employment and salary, accompanied by copies of three recent testimonials, must be received by me at the Town Hall, Ilford, not later than September 27, 1945. Canvassing directly or indirectly will be a disqualification.—Charles N. Roberts, Town Clerk, Town Hall, Ilford.

BOROUGH OF WALTHAMSTOW. Thorpe Coombe Maternity Hospital (54 beds). ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from qualified medical women, including W practitioners who now hold A posts, for the above B2 post, at a salary of £250 plus bonus £24 2s. 4d., with board, residence, and laundry. The appointment will be for a period not exceeding one year. Forms of application, to be obtained from the undersigned, should be completed and returned with copies of three recent testimonials as soon as possible.—G. A. Blakeley, Town Clerk, Town Hall, Walthamstow, E.17.

CITY OF EDINBURGH. Public Health Department. Mass Radiography Unit.—Applications are invited for the position of JUNIOR MEDICAL OFFICER, to serve in the Mass Radiography Unit of the Corporation. Candidates should preferably have had experience in mass radiography and/or in a tuberculosis department or sanatorium. By agreement with the Department of Health the appointment in the first instance will be on a temporary basis. Salary scale £500 by £25 to £700 plus war bonus at present amounting to £60 per annum. Placing on the scale in relation to the candidate's experience may be given. Candidates already in the Public Health Service will require the consent of the Secretary of State in terms of D.H.S. Circular No. 65/1943. Candidates in England and Wales will require the permission of the Minister of Health. Applications should be sent not later than October 6, 1945, to the Medical Officer of Health, Johnston Terrace, Edinburgh, 1.

CITY OF COVENTRY. Gulson Road Municipal General Hospital, Gulson Road, Coventry.—Applications are invited from male registered medical practitioners, including practitioners within three months of qualification and liable under the National Service Acts, for the appointment of JUNIOR ASSISTANT RESIDENT MEDICAL OFFICER (A) at the above hospital. The post will be for a period of six months, but terminable at any time by one month's notice. Salary will be at the rate of £250 per annum, plus war bonus and full residential emoluments. Applications should be made at once to the undersigned.—A. Massey, Medical Officer of Health, Council House, Coventry.

MINISTRY OF PENSIONS.—Applications are invited from registered medical practitioners, men and women, including R and W practitioners who already hold A posts, for appointment as HOUSE PHYSICIANS AND SURGEONS (B2) at the following hospitals: Childwall Hospital, Liverpool (medical and surgical). Queen Alexandra Hospital, Cosham, Hants (surgical). Dunston Hill Hospital, Gateshead (surgical). Llandrindod Wells Hospital, Radnor, Wales (surgical). Newquay Hospital, Cornwall (surgical). Rookwood Hospital, Llandaff (surgical). Ronkswood Hospital, Worcester (surgical). Stoke Mandeville Hospital, Aylesbury (surgical). The appointments offer opportunities for experience in general medicine and in general and orthopaedic surgery. If held by an R practitioner, the appointment will be limited to six months. Salary £300 per annum, plus Civil Service war bonus and free board and lodging or an allowance of £100 per annum if permission is given to live out. Vacancies also exist at the above mentioned hospitals for House Surgeons (A). Applications are invited from registered medical practitioners, men and women, including practitioners within three months of qualification who are liable for service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for a period of six months. Salary £150 per annum, plus Civil Service war bonus and free board and lodging or an allowance of £100 per annum if permission is given to live out. Applications should be addressed to the Secretary, Ministry of Pensions, Medical Services Division, Norcross, Blackpool, Lancs.

CORPORATION OF GLASGOW. MEDICAL OFFICER OF HEALTH.—Applications are invited for the post of Medical Officer of Health for the City of Glasgow from qualified medical practitioners who are registered in the *Medical Register* as holders of a Diploma in Sanitary Science, Public Health, or State Medicine. The Medical Officer of Health is also Port Medical Officer for the Port of Glasgow. The duties comprise the administration of all the statutory health and sanitary services of the Corporation. The post is due to fall vacant at the end of March, 1946; and the new Medical Officer of Health will be expected to take up duty at the beginning of April, 1946, or as soon thereafter as possible. Salary at the rate of £1,500 per annum, rising by annual increments of £50 to £2,000 per annum, plus war increase, and with £50 per annum additional for Port duties. The appointment is subject to the provisions of the Corporation's Superannuation Scheme, and the successful candidate will be required to pass a medical examination. In order to allow time for candidates now abroad or in H.M. Forces to apply, the last date for receipt of applications has been fixed for October 1, 1945.—William Kerr, Town Clerk, City Chambers, Glasgow.

GLOUCESTERSHIRE JOINT BOARD FOR TUBERCULOSIS. Standish House Sanatorium, Stonehouse, Glos.—Applications are invited from registered medical men or women, including R and W practitioners who now hold A posts, for the post of JUNIOR ASSISTANT MEDICAL OFFICER (B2) at the above institution. No previous professional experience is necessary. There are at present 250 beds, including men, women, and children. There is an orthopaedic block. Salary £250 per annum, plus bonus, with board, furnished apartments, and laundry in addition. The appointment is for six months and may be terminable within that period by one month's notice on either side. Closing date Sept. 21, 1945.—Guy H. Davis, Clerk of the Joint Board, Shire Hall, Gloucester.

COUNTY COUNCIL OF INVERNESS. LOCAL MEDICAL OFFICER, Barra.—Applications are invited from registered medical practitioners for the appointment of Local Medical Officer of the Parish of Barra. An income of £420 per annum plus war supplement of £52 is available from the Highlands and Islands Medical Service Fund and County Council. In addition there is a panel practice worth approximately £170, and also club and private practice. Further particulars will be supplied on request. A suitable house (two public rooms, four bedrooms, kitchen, waiting room, and dispensary) is provided rent free at Castlebay. Applications should be lodged with the undersigned not later than October 12, 1945.—J. W. McKillop, County Clerk, County Buildings, Ardross Street, Inverness.

COUNTY OF DENBIGH. Wrexham Emergency Hospital (350 beds, excluding Annexes).—Applications are invited from registered medical practitioners for the appointment of a HOUSE PHYSICIAN (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by practitioner who is liable under these Acts, appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. Salary is at the rate of £200 per annum, plus cost of living bonus, together with the usual residential emoluments. Applications to be sent immediately to Dr. H. Arwel Thomas, County Medical Officer of Health, 40, Well Street, Ruthin, Denbighshire

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10

CITY OF MANCHESTER. Public Health Department. ASSISTANT TUBERCULOSIS OFFICER (TEMPORARY).—Applications are invited for the position of Assistant Tuberculosis Officer (Temporary). Candidates must be registered medical practitioners having special knowledge of medical and surgical tuberculosis, and should state whether they possess the Diploma of Public Health. The commencing basic salary is £675 per annum, but three annual increments of £25 may be granted at the discretion of the Council. A temporary cost-of-living award, which at the present time is £60 per annum, is payable in addition to the foregoing salary. The appointment is subject to the Manchester Corporation conditions of service. The consent of the Minister of Health has been obtained to the making of this appointment. Although the vacancy is on the permanent assignment of staff, the appointment will be temporary for the time being, and subsequently the officer appointed will be eligible to apply for the permanent post. Attention is drawn to Ministry of Health Circulars 2818 and 2881, which require that whole-time Public Health Officers who are of military age must, before applying for any other post, first obtain the prior permission of the Minister of Health. Applications (no special form is issued), endorsed on the envelope "Assistant Tuberculosis Officer," must be addressed to the Medical Officer of Health, Town Hall, Manchester, 2, and not to members of the Committee or Council, and must be received by him not later than September 29, 1945. The gentleman appointed will be under the administrative control of the Medical Officer of Health, and the immediate control of the Senior Tuberculosis Officer. He will be required to devote the whole of his time to the duties of his position, to execute the Deed of Service, to contribute to the Corporation Superannuation Fund, and, if under the age of 30, to the Widows and Orphans Pensions Scheme. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF NORWICH. Woodlands Hospital (311 beds). ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners for the appointment of Assistant Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of one year. The salary is at the rate of £250 per annum, with full residential emoluments. Further particulars of appointment to be obtained from the Senior Medical Officer, Woodlands Hospital, Bowthorpe Road, Norwich, and to whom applications should be sent.—Bernard D. Storey, Town Clerk, City Hall, Norwich.

CITY OF BIRMINGHAM MENTAL HOSPITAL, Winson Green, Birmingham, 18.—Applications are invited, male or female, for the post of TEMPORARY RESIDENT ASSISTANT MEDICAL OFFICER (B1). Salary £350, rising by annual increments to £450, with full residential emoluments, plus £50 for the D.P.M. and war bonus £39 4s. 8d. male, £35 11s. 11d. female. Suitably qualified R and W practitioners holding B2 appointments, also R practitioners holding B1 appointments and rejected by the R.A.M.C., may apply. Applications to be sent to the Medical Superintendent by September 22, 1945.

COUNTY BOROUGH OF NEWPORT. Social Welfare Committee.—Applications are invited from registered medical practitioners, male or female, for the temporary appointment of JUNIOR RESIDENT MEDICAL OFFICER (A) at Wooloston House Emergency Hospital, Newport, Mon. Salary £150 per annum, with full residential emoluments. All fees, with the exception of coroners' fees, are payable to the Social Welfare Committee. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months, otherwise twelve months. Applications should be sent at once to Tom Kay, Director of Social Welfare, Town Hall, Newport, Mon.

COUNTY BOROUGH OF IPSWICH. Borough General Hospital.—Applications are invited from registered medical practitioners, male and female, for the appointment of RESIDENT ASSISTANT MEDICAL OFFICER (B1). Applicants should have held house appointments and had medical experience. Salary at the rate of £350 per annum, plus full residential emoluments. Suitably qualified R and W practitioners holding B2 appointments, also R practitioners holding B1 appointments and rejected by the R.A.M.C., may apply. Applications to the Medical Officer of Health, Public Health Department, Elm Street, Ipswich.

LONDON CHEST HOSPITAL, Victoria Park, E.2. HOUSE PHYSICIAN (B2), male or female, required on November 1. R and W practitioners who now hold A posts may apply. Six months' appointment. Salary at the rate of £150 per annum. Board, residence, and laundry provided:

HOUSE SURGEON (B2), male or female, required on November 1, with previous surgical experience, preferably thoracic. Salary £150 per annum, with full residential emoluments. R and W practitioners who now hold A posts may apply, when appointment will be limited to six months.

Applications for each post should be sent by September 26 to the Secretary.

COUNTY BOROUGH OF WEST HAM. Whipps Cross Hospital, Leytonstone, E.11 (1,300 beds).—The Council invite applications from registered medical practitioners, including those serving in H.M. Forces, for the post of MEDICAL SUPERINTENDENT of the above general hospital. In accordance with the Council's resolution the post will be designated temporary until the conclusion of the war, but if satisfactory service has been given the post will be made permanent. The consent of the Minister of Health has been obtained to the making of the appointment. The salary for the post is £1,100 per annum, together with a house valued for superannuation purposes at £100 per annum. On the publication of the revised "Askwith Scale" the Council will amend the salary in accordance with that scale. Candidates must have had both wide clinical and administrative experience, and the possession of higher degrees will be considered an advantage. Preference will be given to candidates who have held already the post of Medical Superintendent to a general hospital. The appointment will be subject to the Council's regulations as made from time to time regarding holidays, sick pay, etc., and the successful candidate will be required to pass a medical examination. Forms upon which application must be made can be obtained from the Medical Officer of Health, 223-225, Romford Road, West Ham, E.7, on receipt of a stamped addressed envelope, and returned to him not later than October 8, 1945. Canvassing members of the Council is prohibited and will disqualify.—Charles E. Cranfield, Town Clerk, Town Hall, West Ham, E.15.

GLAMORGAN COUNTY COUNCIL, West Glamorgan County Hospital, Neath.—Applications are invited from registered medical practitioners (including R and W practitioners now holding B2 appointments) for the appointment of TEMPORARY RESIDENT ASSISTANT MEDICAL OFFICER (B1) for the above-named Hospital. R practitioners now holding B1 appointments who have been rejected by the R.A.M.C. may also apply. Applicants should have held a house appointment, and as the work will consist mainly of obstetrics and gynaecology, obstetrical experience is necessary. The Hospital is a Training School for Midwives, ante-natal clinics are held, and confinements exceed 1,000 per annum. Salary £350, rising by annual increments of £25 to £550, plus prevailing cost-of living bonus and residential emoluments. All fees whatsoever received by the successful applicant whilst holding the appointment must be handed over to the County Council. The appointment will be terminable by one month's notice on either side. Applications should be sent to the County Medical Officer, Glamorgan County Hall, Cardiff, within ten days of the publication of this advertisement.—D. J. Parry, Clerk of the County Council, Glamorgan County Hall, Cardiff.

LANCASHIRE COUNTY COUNCIL.—Applications are invited for the following posts: Wrightington Hospital, near Wigan. JUNIOR MEDICAL OFFICER (B2) at this Hospital, containing 370 beds (260 beds for non-pulmonary tuberculosis, adults and children), 20 beds for "combined" pulmonary and non-pulmonary cases, and 70 beds for pulmonary cases). The medical staff consists of medical superintendent, deputy and two medical officers, two consultant orthopaedic surgeons, other visiting surgeons, and visiting physician. Good facilities for reading for M.D.

High Carley Sanatorium, near Ulverston. JUNIOR MEDICAL OFFICER (B2) at this sanatorium, containing 130 beds for adult pulmonary patients and (at Oubas House) 21 beds for pulmonary cases in children. The medical staff consists of medical superintendent, deputy, and medical officer.

The salary for each post is £300 per annum, plus bonus, together with board, single quarters, and laundry, valued at £146. R and W practitioners who now hold A posts may apply, and if held by an R practitioner the appointment will be limited to six months, otherwise, one year. Forms of application and conditions of appointment from Central Tuberculosis Officer, County Offices, Preston.

NORTHUMBERLAND COUNTY COUNCIL. Hexham Emergency Hospital (Regional Orthopaedic Centre) (640 beds). HOUSE SURGEON (A).—Applications for the above post are invited from registered medical practitioners, male or female, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months, otherwise it will be for a period of one year. Salary is at the rate of £120 per annum, with full residential emoluments. The hospital offers excellent training and experience in orthopaedic surgery. Applications should be sent to the undersigned immediately.—J. B. Tilley, County Medical Officer, County Hall, Newcastle-upon-Tyne.

NORTHUMBERLAND HOUSE, Finsbury Park, N.4.—Applications are invited for the post of ASSISTANT MEDICAL OFFICER (B1), to the private mental hospital, male or female. Salary £400 per annum, with full residential emoluments. R and W practitioners now holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Applications to Medical Superintendent.

MIDDLESEX COUNTY COUNCIL.—JUNIOR ASSISTANT MEDICAL OFFICER (B2, Resident, Woman) required for maternity unit of WEST MIDDLESEX COUNTY HOSPITAL, Isleworth, Middx., and Annexe at Chiswick. Applications invited from registered medical practitioners, including W practitioners who now hold A posts. Salary £250 per annum, board, lodging, and laundry. Additional cost-of-living bonus (now £60 per annum, proportion only in cash). Whole-time obstetric duties such as Council may require under supervision of Medical Director. Appointment, subject to medical examination and one month's notice, is for six months, with possibility of extension to twelve months. Post vacant October 16, 1945. Application to Medical Director, "Z," of Hospital. Closing date September 22, 1945. No forms provided.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL.—TEMPORARY ASSISTANT MEDICAL OFFICER (B1), male, required at NAPSBURY MENTAL HOSPITAL, Nr. St. Albans, Herts. Salary £440 to £510 p.a., plus war bonus according to qualifications and experience, with board, lodging, laundry and attendance. In addition £50 p.a. is paid for D.P.M. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applications to the Medical Superintendent, "Z."—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W 1.

SURREY COUNTY COUNCIL. St. Luke's Hospital, Guildford (500-600 beds). WHOLE-TIME PATHOLOGIST.—Applications are invited from suitably qualified practitioners, male and female, for the appointment of Whole-time Pathologist to the St. Luke's Hospital, Guildford (which includes the large E.M.S. Radiotherapy Unit). Applicants should have had wide pathological experience and be of senior standing in the profession. The person appointed will be in charge of the work of the Pathological Laboratory at the hospital, where there are at present two Technicians employed, and will be required to perform all autopsies. The appointment will be temporary and subject to three months' notice on either side, but any Local Government Superannuation rights will be preserved. The permanent appointment will be re-advertised later in order to give doctors at present serving with H.M. Forces an opportunity to apply after their discharge. Commencing salary according to experience on the grade £1,000 by £50 to £1,500 p.a. Apply to the County Medical Officer, County Hall, Kingston-upon-Thames, by October 15, 1945. This temporary appointment is advertised by permission of the Ministry of Health.

SURREY COUNTY COUNCIL. St. Helier County Hospital, Carshalton (862 beds). CASUALTY OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the above appointment, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Previous experience in E.N.T. work desirable. Salary is at the rate of £250 p.a., plus war bonus, plus full residential emoluments.

Applications are also invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), including practitioners within three months of qualification who are liable under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for a period of six months, otherwise it will be for a period not exceeding one year. Salary is at the rate of £120 p.a plus residential emoluments.

Apply to the Medical Superintendent.

SURREY COUNTY COUNCIL. Farnham County Hospital, Hale Road, Farnham (230 beds).—Applications are invited from registered medical practitioners for the appointment of RESIDENT ASSISTANT MEDICAL OFFICER (B1) to the above general hospital. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applicants must have had previous surgical experience, preferably including orthopaedic work. The appointment will be on the Council's temporary staff and subject to one month's notice on either side, but any Local Government Superannuation rights will be preserved. Salary at the rate of £550 p.a., plus war bonus, plus full residential emoluments. Apply to the Medical Superintendent by September 20, 1945.

W. J. SANDERSON EMERGENCY HOSPITAL, North Avenue, Gosforth, Newcastle-upon-Tyne, 3.—Applications are invited from registered medical practitioners for the appointment of a HOUSE SURGEON (A), now vacant Salary £300 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise it may be extended for a further period. Applications should be sent to the undersigned as soon as possible.—Alexander Lawther House Governor and Secretary.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10

ABERDEEN MATERNITY HOSPITAL. TWO RESIDENT HOUSE SURGEONS (B2).—Applications are invited from registered medical practitioners, male or female, for two appointments of Resident House Surgeons (B2), to become vacant on October 5, 1945, including R and W practitioners who now hold A posts. The appointments will be limited to six months. The salary is at the rate of £75 per annum if no previous experience, £100 per annum with previous experience, with full residential emoluments. Applications should be sent to the undersigned not later than September 22. R or W practitioners must have obtained the sanction of the Scottish Central Medical War Committee to their application.—Watt & Cumine, Secretaries, 8, Golden Square, Aberdeen.

ABERDEEN ROYAL INFIRMARY.—Applications are invited for appointment as REGISTRAR in General Surgical Wards (B1). Remuneration at the rate of £350 per annum, with a living-out allowance if quarters not available. R practitioners now holding B2 or B1 posts may apply, but they must have obtained the sanction of the Scottish Central Medical War Committee to their application. Applications should be lodged with the undersigned not later than September 26, 1945.—John A. McConachie, Clerk and Treasurer, 1, Albyn Place, Aberdeen.

BRISTOL ROYAL HOSPITAL (Incorporating the Bristol Royal Infirmary and Bristol General Hospital). —Applications are invited from registered medical practitioners for the A appointments of:

(1) HOUSE SURGEON to the E.N.T. Department.

(2) SECOND CASUALTY HOUSE SURGEON.

UNIVERSITY OF LONDON.
KING'S COLLEGE.
FACULTY OF MEDICAL SCIENCE.

The Medical Faculty at this College of the University gives instruction in the subjects of medical science for all the usual pre-medical and intermediate examinations in medicine, surgery, and dentistry. Through the four associated hospitals, students of the College have clinical facility of over 1,000 beds. The Medical Faculty of the College provides a *general university education* in touch with other faculties, classes of which medical students are permitted to attend. There are many college societies, clubs, and functions, in which students of all faculties have opportunity of meeting each other. The College has an excellent athletic ground at Mitcham with a new and well-equipped pavilion. The first year subjects are taught in the departments of the Faculty of Natural Science and those for the second and third years in the Faculty of Medical Science. This consists of the Hambleden Department of Anatomy and the extensive Department of Physiology. The buildings of these Departments provide the College with a complete Medical Faculty which embodies the newest up-to-date ideas in laboratory construction and equipment. Valuable scholarships and prizes are awarded on the results of examinations held annually.—S. T. Shovelton, M.A., Secretary, Strand, W.C.2.

EX-V.A.D. and civil servant requires post RECEPTIONIST to specialist or dental surgeon, London, testimonials clerical, nursing, available.—Box 2109, B.M.J.

EXPERIENCED SECRETARY-RECEPTIONIST available for post with West End surgeon or specialist.—Box 1625, B.M.J

LADY, with Apothecaries Hall certificate, requires APPOINTMENT with doctor or chemist, on coast, near country preferred, or Bristol or Midlands.—Box 2135, B.M.J.

RADIOLOGIST requires SECRETARY-RECEPTIONIST, previous experience an advantage, shorthand, typewriting essential.—Write giving full particulars—Dr. Greig, 3, Lansdowne Road, Croydon.

R.A.F. OFFICER'S WIDOW, age 25, with practical nursing experience, anxious obtain position doctor's or dentist's RECEPTIONIST.—Reply Mrs. Johnston, 90, Clifton Hill, St. John's Wood. Tel.: Maida Vale, 8911.

SECRETARY, thorough knowledge private consultant and clerical work, seeks POST with West End specialist.—Box 2110, B.M.J.

SECRETARY-RECEPTIONIST desires POST with doctor in Birmingham area, 12 years' previous experience, able drive car, salary secondary consideration if congenial post.—Miss M Harris, Southville, Priory Road, Edgbaston, Birmingham.

YOUNG LADY seeks post with doctor as RECEPTIONIST.—Box 2112, B.M.J.

MISCELLANEOUS

ANAESTHETICS.—Doctor requires Boyle's portable GAS-AND-OXYGEN APPARATUS.—Please write giving full particulars to Box 2122, B.M.J.

ALPINE V1 ULTRA-VIOLET LAMP, latest model, perfect condition, little used, £45, can be seen Wimbledon.—Phone Liberty 1677.

CONSULTING-ROOM COUCH, walnut, cane folding seat, two cushions, in excellent condition, offers.—Davies, Cranbrook, Harlow-Common, Essex.

FOR SALE, LEITZ 1/12 in. oil-immersion LENS, very good condition, £9 or near offer.—Write Anderson, Hillsborough, Ross-on-Wye, Herefordshire. Phone, Ross 101.

FOR SALE, glass INSTRUMENT CUPBOARD (Down Bros.' make) 48 × 30 in., 15 in. depth, double doors, five glass shelves, also anaesthetic table, 17 × 17 in., with drawer and glass shelf, £30—Apply Brook Heath, Brook Lane, Sarisbury, Nr. Southampton.

FOR SALE, Kodak *X*-RAY REDUCTION CAMERA complete, condition as new. What offers? — General Superintendent, Altrincham General Hospital.

FOR SALE U.V. LAMP, Hanovia Ltd; A.C. 230, also 2 K.W. ternovent with thermostatic control, as new, best offers.—Phone, Putney 5698 8 to 10 a.m.

KEELER wide-angle OPHTHALMOSCOPE, green filter, diaphragm, bulbs, case, perfect, also Zeiss Deltrintem, 8 × 30 £25.—Offers to Watson 66 Latchmere Road, Kingston, Surrey.

URGENTLY WANTED, *Journal Industrial Hygiene and Toxicology*, Vol. 25 Nos. 3 and 4 (March and April, 1944), Vol. 25 Nos. 9 and 10 (November and December, 1942).—State price to Box 2121, B.M.J

X-RAY EQUIPMENT, retiring Radiologist has modern installation for disposal in whole or part: 4-valve unit, rotating anode tube, etc., darkroom equipment.—Box 2120, B.M.J.

WANTED TO PURCHASE.—Cameras, enlargers and all photographic apparatus, exposure meters, tripods, etc., microscopes, binoculars, cine cameras, and projectors Prompt cash and high prices offered.—Wallace Heaton, Ltd., 127 New Bond Street, London, W 1

PROFESSIONAL NAME PLATES promptly engraved Send wording for full-size sketch and list (encl. 2d stamps).—Malle & Son, Ltd., 367, Euston Road, London, N.W.1.

MEDICAL PHOTOGRAPHS and drawings for illustration, records, etc.—Write for particulars Eric O. Sonntag, 159, Bickenhall Mansions, Baker Street, London W.1. WELbeck 8860.

TOILET ROLLS (Gordon's Thintex) for sale prices, carriage paid and including cost of cartons 1 gross £9, 6 dozen £4 13s. 6d., 3 dozen £2 8s. 6d., early delivery in rotation, cash with order to J. Gordon (Dept. 7), 33, Connaught Gardens, Muswell Hill, London, N 10.

WATSON SUN-RAY EQUIPMENT, high-power clinic lamp, 1,400 watt, 210 volt, complete primers, goggles, cheap quick disposal.—Joseph Sankey & Sons, Ltd.; Bilston, Staffs.

1,000 DOCTORS' A/c FORMS, 25s., carriage paid printed in the modern easily read lettering on good paper, samples sent.—R. Anderson & Son, Medical Printers, 1, Hill Place, Edinburgh (near Surgeons' Hall).

MOTOR CARS

FOR SALE 1939-40 ROVER 12 h.p. car in excellent condition. This car can be seen in Glasgow by appointment.—Offers to Box 2123, B.M.J.

MORRIS 8, 1939, reconditioned engine fitted 1945, new tyres, bodywork in good condition, £350—Box 2091, B.M.J.

SS JAGUAR, 1937, for sale in October, completely overhauled, re-bored, and re-sprayed, owner-driven only, bargain, £495.—Box 2090, B.M.J.

HOUSES, CONSULTING ROOMS

CONSULTING ROOMS to let, W.1, off Manchester and Portman Square, area zoned for medical and residential purposes, several ground-floor and first-floor consulting rooms, operating theatre suitable for dentist, central heating, lift, h. and c. water.—Write Box 2116, B.M.J.

CONSULTING ROOM to let, quiet, suitable for psycho-analyst, also large garage to let.—131, Harley Street. Welbeck 4508.

EXCEPTIONAL CONSULTING ROOM to let in one of best houses in Harley Street, furnished, rent £300 per annum, long lease essential.—Box 2117, B.M.J.

PHYSICIAN requires PART-TIME CONSULTING ROOM in West End, Thursday afternoons.—Box 2118, B.M.J.

WITHIN 30 minutes of Charing Cross comfortable superior ACCOMMODATION very open country, large garden, bed and breakfast or would consider semi-invalid or child.—Box 2115, B.M.J.

NURSING HOMES

PRIVATE MENTAL HOME for disposal, established three quarters of a century, thirty beds, fully licensed.—Apply Messrs. Mayhew and Co., Solicitors, 57, Calthorpe Road, Edgbaston, Birmingham, marking envelopes P.M.H.

Published by the Proprietors, the British Medical Association, Tavistock Square, London, W.C.1, and printed by Fisher, Knight & Co., Ltd., The Gainsborough Press, St. Albans. Printed in Great Britain. Entered as Second Class at New York, U.S.A., Post Office.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY SEPTEMBER 22 1945

HOSPITAL PLANNING IN SOUTH-WEST SCOTLAND

DUMFRIES AND GALLOWAY DIVISION PROPOSALS

In anticipation of the requirements of the National Health Service scheme, the Dumfries and Galloway Division of the B.M.A. has prepared a report on the post-war hospital facilities which will be necessary in its area. It is expected that the three counties of Dumfries, Kirkcudbright, and Wigtown, with the large burgh of Dumfries, which is the area of the Division, will be one of the areas of the hospital region of South-West Scotland. Its population at the last census was about 140,000. The report was prepared by a committee of 15, under the chairmanship of Mr. R. L. Beveridge, with Dr. J. G. McWhirter as secretary. The committee was constituted at a meeting of the Division to which all practitioners in the area were invited.

Large-scale Rebuilding

The first conclusion of the committee—a unanimous one—is that none of the existing hospitals in the area, with the exception of Crichton Royal, Dumfries, which is a mental hospital, and possibly some of the cottage hospitals, is capable of adaptation to satisfy modern standards. Dumfries and Galloway Royal Infirmary (115 beds) is on a cramped site and cannot be modernized. It is proposed that it should be rebuilt on a site of 80 acres, half of which would be taken up by the tuberculosis unit. The Cresswell counties maternity hospital, the infectious diseases hospitals, and the tuberculosis sanatorium all need rebuilding and should be brought together at the central hospital at Dumfries, while there would be a peripheral hospital at Stranraer.

In the new central hospital it is proposed that the medical unit should accommodate 120 beds, with a staff of one physician of consultant status, one resident medical officer, and two house-physicians, and the surgical unit 150 beds, with two operating theatres, and a staff of one senior and one junior surgeon, two anaesthetists, one resident surgical registrar, and four house-surgeons. The number of confinements in the area is about 3,000 annually; at present 30% of these take place in hospital, but it is considered that in the future this proportion may rise to 60% or even higher. It is therefore suggested that there should be a major obstetric unit of 100 beds at Dumfries, and a peripheral unit in the western part of the area, presumably at Stranraer. The service would aim at ensuring that every pregnant woman had an ante-natal clinic which she could attend within easy reach of her home. For this purpose the cottage hospitals might be used. The medical staff of the maternity service should consist of one obstetrician and gynaecologist, one anaesthetist, a resident registrar, and four house-surgeons. A paediatric unit of 80 beds for children under 12 is proposed, with a paediatrician of consultant status and a house-physician.

Infectious Diseases Hospitals

The committee's view is that the practice of treating cases of infectious disease in small district hospitals cannot be defended. The only question is whether all cases of infectious disease should be treated in a hospital for that purpose or in a unit of a general hospital. The latter alternative is favoured. About 200 beds (140 at the central and 60 at the peripheral hospital) will be required, and the staff should consist of one physician in charge of the unit, with two house-physicians. The tuberculosis unit of 200 beds, in close proximity to the general hospital, should have a resident staff of one physician, one assistant medical officer, and one house-physician. The present arrangement for venereal diseases is that four local authorities maintain an out-patient clinic at the county buildings, Dumfries. It is considered undesirable for clinics to be established elsewhere than at the central hospital, but an extension of the general practitioner service, such as is carried on in Wigtownshire, is recommended, and beds should be available at the central hospital for highly infective patients, cases complicated by pregnancy, patients suffering from side-effects of treatment, and those requiring special medical or surgical treatment or undergoing the intensive therapy which seems likely to come into more common use. The staff would consist of one venereologist. An ear, nose, and throat department in charge of one surgical specialist with a house-surgeon is projected, also a psychiatric unit with out-patient and in-patient facilities working in close liaison with Crichton Royal, and wards of 100 beds for chronic sick and incurables.

The amount of pathological work in a hospital of this size would necessitate the provision of a fully equipped laboratory, with a staff of one pathologist, one bacteriologist, who would be closely associated with the area M.O.H. for epidemiological investigations, and laboratory technicians and assistants. There should be a department for radiodiagnosis, with one radiologist and an assistant. *X*-ray therapy in Scotland is expected to be centred in the five principal towns, and a peripheral radiotherapeutic clinic at Dumfries would be served by a visiting specialist from the key hospital in Glasgow. The same would obtain in ophthalmology. The orthopaedic service also must be regional and based on an orthopaedic hospital, but out-patient and follow-up clinics must be established. Other departments would be a large one for physiotherapy and rehabilitation, a social service department under the control of a qualified almoner, a central records department, some teaching facilities for both medical students and nurses, and a certain amount of clinical research. There would also be a private-patient annexe with 50 beds. The cottage hospitals should be used as peripheral clinics, at which the advice of visiting specialists would be obtainable, and should be staffed by general practitioners of the district. The scheme also provides for three convalescent homes.

Altogether under this ambitious but well-thought-out plan there would be close upon 1,000 beds at the central hospital, Dumfries, and 60 at the peripheral hospital, Stranraer, with a medical staff of 38 and five visiting specialists. By this piece of planning Dumfries has furnished an example of what other Divisions might do in their localities.

"GRADUALNESS" IN SOUTH AFRICA

NATIONAL HEALTH SERVICE PRIORITIES

The National Health Service in South Africa, on which a Government Commission reported in the early part of the present year,[1] appears to be taking shape by instalments. The National Services Advisory Committee, set up by the Minister of Welfare and Demobilization, in whose Ministry is included the portfolio of public health, has received from the Minister a special directive that the services to receive priority should come under the following five headings: (1) A national scheme for tuberculosis. (2) A national scheme for venereal disease. (3) The establishment of a division of health education in the Department of Public Health. (4) The establishment of an institute of hygiene. (5) The regionalization of the activities of the Department of Public Health in the light of the probable development of a National Health Service.

It is agreed that these proposals are by no means the full National Health Service as envisaged in the report of the Commission, and there is as yet none of the central organization proposed in that report—a National Health Board, a Health Services Personnel Commission, and so on. Personnel so far engaged for health centres have been appointed by the same methods and are subject to the same conditions of service as obtain in the public service generally, but the appointments hitherto made are all on a temporary contract basis, which will be revised in the light of any subsequent developments in the establishment of an organized National Health Service in full conformity with the principles of the report. Meanwhile, several new types of post have been established within the public service for preventive work at health centres.

---

[1] The recommendations of the Government Commission were given in the *Supplement* of April 7 (p. 52), and the reaction of the profession to the report was described in the *Supplement* of May 12 (p. 87).

The opinion in the medical profession has always been that a National Health Service can function satisfactorily only when in all its departments, particularly hospitals, it is the responsibility of the Central Government. A splitting of control between the central and provincial authorities would, in the profession's view, give rise to difficulties. The South African Prime Minister has stated, however, that the Government will not disturb provincial control of general hospitals, and therefore certain measures have been suggested for as good an arrangement as possible between the different authorities in respect of hospital services. In a guarded editorial the *South African Medical Journal* says that "whether the proposed arrangements will meet the requirements cannot at this stage be gauged or anticipated." Concerning a statement by the Advisory Committee on the whole subject the journal says, "We are not committed to it, and it will probably be fully discussed at the next meeting of Federal Council [of the Medical Association of South Africa (B.M.A.)]."

It appears that all the Provinces have accepted in principle the provisions of free hospitalization in the hospitals controlled by them, and the Government is prepared to give them increased financial assistance to carry out this policy. The Government itself will probably make provision for free hospitalization (it is already mostly free) in the hospitals for which it is responsible—namely, mental hospitals, and hospitals for tuberculosis, venereal diseases, and formidable epidemic diseases. Out-patient services, which are at present provided by general hospitals, will for the most part be transferred to health centres when and where these are established by the Government.

One matter on which an early decision will have to be taken by the Government concerns the method of payment for curative services at the health centres. The primary purpose of health-centre practice is the promotion and safeguarding of personal health by way of periodical medical examinations, and health education of individuals and families by doctors at the centres and health visitors in the home. Such services are not expected to come largely into competition with private practice; but, on the other hand, they may very well reveal, particularly at the outset, a need for curative services which the patients attending the health centre will often, if not always, desire to be carried out by the doctors working there. Thus a conflict may arise between the health-centre service and private practitioners in the areas where health centres are established. A decision on the important matters here at stake has not yet been taken by the Government, but the Advisory Committee (which, as already stated, is the Minister's appointed body) has given an assurance that great care will be taken to establish health centres only at points where this problem will not arise or will be minimal. An undertaking has also been given on the part of the committee to keep the profession informed of all significant events as they occur, and to consult the Medical Association on all points affecting the interests of its members. The Government has made available a sum of £50,000 for the establishment of health centres.

"FREE HOSPITAL" EXPERIENCE IN NEW ZEALAND

THE BURDEN ON LOCAL RATES

One of the principal features of the social security scheme which came into operation in New Zealand on April 1, 1939, was a provision that all should receive hospital treatment at no extra cost. The subsequent experience in Wellington, the capital, is instructive. In the public hospital there, which is under the control of a board representing the contributory local authority, the total number of patients treated during the year before the bringing in of social security was 11,522, and the cost of maintenance for each patient-day was 12s. 4d. Last year the number of patients was 21,645, or almost double, and the cost was 22s. 1d. The levies under social security in Wellington have risen steadily from £94,500 in 1940–1 to £210,869 in 1945–6. For every £100 of rates levied before social security came in, £13 8s. 9d. was for hospital purposes; now out of every £100 the hospital receives £25 15s. 4d.

At a recent meeting of the Wellington City Council the ever-increasing burden to the citizens of the hospital rate gave rise to a vigorous debate. It was stated that the hospital board was powerless to arrest the rising charges, though no doubt exercising economy as far as compatible with efficiency. It was demanded that the Dominion Government, which introduced social security on the plea that all would receive hospital treatment at no extra cost, should face up to the situation. One councillor said that it was important that ratepayers should realize how far they had been "let down" by the promise of an entirely free hospital service. Since social security came in the city had had to find nearly a million for "free" service. The average Wellington householder, owning a property of the value of £400, had paid during these six years £21 18s. in hospital rates—the price of his "free" hospital service. Under the guise of providing free treatment under social security the Government had imposed a special burden upon one class of the community.

It was also stated that apart from the question of free treatment there had been a tremendous increase in hospitalization. Doctors now were looking with disfavour upon home treatment for many illnesses. On the other hand, it was the view of some members of the city council that the health of New Zealand had been greatly improved by the additional services since social security came in, and that New Zealand was ahead of all other countries in this respect.

The national Government is to be asked, as the service is a national one, to finance it nationally, so that a double burden is not placed upon one section of the community—the ratepayers of the urban area in which the hospital stands.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Mr. C. W. Gordon Bryan, F.R.C.S., at 118, Harley Street, W.1; Dr. W. S. C. Copeman, F.R.C.P., at 41, Harley Street, W.1; Mr. R. K. Debenham, F.R.C.S., at 18, Greenfield Crescent, Edgbaston, Birmingham; Mr. George T. Hankey, M.R.C.S., L.D.S., at 79, Harley Street, W.1; Dr. H. L. Marriott, F.R.C.P., at 63, Wimpole Street, W.1; Dr. Richard R. Trail, F.R.C.P., at 55, Harley Street, W.1.

Correspondence

Medical Demobilization

SIR,—Though there has already been considerable correspondence on the subject of demobilization of medical officers, we feel that the final signing of the peace with Japan has radically altered the whole situation.

The following facts are well known to the profession, but cannot be too often repeated:

(1) In the three Services there is one medical officer per 450 men, men who have been repeatedly examined during the past six years, and from whom the unfit have been returned to civilian life. They are in consequence that section of the community least likely to require medical attention.

(2) In civilian life there is one doctor per 2,500 (approximately) members of the population; among these are numbered children and old people and those who, as already mentioned, have been discharged from the Services.

(3) The war is now unquestionably over, and as a result the necessity of keeping numerous medical officers in the Services to deal with casualties, actual or potential, has disappeared.

(4) As an obvious result of the facts stated in (1) and (2), the Service doctors have insufficient medical work to do, while at the same time their civilian colleagues, many of whom are far past the age at which they intended to retire, are grossly overworked and face the prospect of the coming winter with considerable misgiving.

While the war was in progress and while large numbers of casualties were expected, the need for a high proportion of Service medical officers was apparent. This contingency no longer exists and there can be no possible justification for maintaining the wartime strength of 2.3 M.O.s per thousand men. Despite this fact, the R.A.F. has announced (*Lancet*, Sept. 1) that this proportion of 2.3 per thousand is to be maintained and that R.A.F. medical officers are to be demobilized *pari passu* with the rest of the Service at that rate.

The early release of students, teachers, miners, and builders has already been well recognized as vital to the national interest, and has been implemented. We believe it is essential that the medical establishments of the Services are now reduced to peacetime level, so that doctors may be released to civilian life, where they, too, are so much more urgently needed in the national interest.—We are, etc.,

K. E. GUEST, S/Ldr.
M. J. GORDON, S/Ldr.
G. MACNAUGHTAN, S/Ldr.
W. H. T. SHEPHERD, S/Ldr.

G. F. PANTON, F/Lt.
J. R. HUGHES, F/Lt.
L. NANCEKIEVILL, F/Lt.

Demobilization from the R.A.F.M.S.

SIR,—We have recently been officially informed of the demobilization plans for the R.A.F. Medical Branch. Group 18 will be demobilized by the end of December; Groups 19 and 20 will be demobilized in January and February respectively. It is intended, it is added, that R.A.F. medical officers will be released at the rate of 2.3 medical officers for every 1,000 men released, the present number of M.O.s in the R.A.F. being 2.27 per 1,000. Meantime, as we are so constantly reminded, doctors are being mobilized from civil life with greatest possible speed.

From these figures it would appear that the R.A.F. Medical Branch intends to retain medical officers up to its war establishments. There was some justification for the extravagant medical establishments during the war, but surely there is no possible justification now. It is manifestly unreasonable to expect the Service chiefs to cut establishments down to the absolute minimum. They are only human, the Service is their career, and they naturally do not wish a drop in rank any earlier than can be avoided. Let us hope that the Central Medical War Committee, as advisers to the Government, will scrutinize the suggested establishments most closely.

The greater part of a Service M.O.'s work, now that the war is over, is examination of personnel prior to release. This work will inevitably get much greater as demobilization speeds up. The point arises whether this examination is really necessary and not merely a reduplication of existing records. One assumes that the examination is intended to prevent the undeserving from obtaining pensions: it is unlikely that there is any more exalted motive behind it. Surely, if the question of a pension arises, there is a most complete medical history in the man's documents. I can speak only for the R.A.F., but its medical records, though they entail a vast amount of clerical work, are first-class. It is reasonable to expect that they would be much more useful than a single examination, made when the man's medical history was not available, as happens in every case over-seas. Cutting out these, in my opinion, unnecessary routine examinations would enable many more Service doctors to return to civil life, where they are urgently required and where they all wish to be.—I am, etc.,

"R.A.F. MEDICAL OFFICER."

Demobilization and Replacement

SIR,—With regard to the demobilization of Service medical officers, and their replacement by young practitioners from the E.M.S., I would like to raise a particular matter to which, hitherto, no attention has been drawn—namely, the conscientious objector. In this war a certain number of doctors of military age, and physically fit, have been admitted to the Register of Conscientious Objectors, and have been exempted from service with the armed Forces. Now that the war has ended, and there is no longer any question of fighting or bloodshed, there can be no justification for the continuation of the policy of exempting such people from service with His Majesty's armed Forces, as grounds for conscientious objection do not now exist. Their service would, in fact, constitute a service of mercy.

Nobody would deny that the policy of the Central Medical War Committee of recruiting young civilian practitioners to replace doctors who have already played their part with the armed Forces is justified. The rate of demobilization of Service doctors could, to some extent, be accelerated if the C.M.W.C. adopted the policy of recruiting everybody eligible for recruitment (i.e., those who have completed two years in a B1 post and general practitioners below the age of 35), whether or not their names appear in the Register of Conscientious Objectors.—I am, etc.,

"CENTRALIAN."

Release of R.N.V.R. Medical Officers

SIR,—The latest information within the Royal Navy shows that the main body of officers *should* be demobilized up to Group 17 by the end of the year, but that medical officers will *probably* lag considerably behind. For up to six years we have had to be satisfied with this "should," "probably," "maybe," "but" system of answers. Is it too much to hope that by this time we can have someone who will answer "yes" or "no"? I can only remember a definite answer on one occasion—"no"—to a series of requests for a course which was open to R.N. officers of both permanent and emergency lists.

During the whole of the war years the permanent officers have purported to represent us, but little that these seniors have done has inspired us with confidence that they have our welfare anywhere near the heart. Rather the reverse if one reviews the chaotic state of regulations applying to R.N.V.R. medical officers. Could we not now have senior R.N.V.R. officers, both temporary and permanent, co-opted into the administrative body in something like the same proportion, by numbers, as that in which we are serving, so that at least we would be sure of true representation whatever the outcome? This would, I feel, allay many of our misgivings. Many like myself, anxious as we are to return to hospital or practice, feel that we should stay to "finish the job" but know that too long we have been the "tools" of those who, time and again, have shown that they regard us as nought but a necessary evil. For that reason we have, I think, a right to demand that our demobilization shall at least keep pace with the other Services.

To avoid a fifth appointment within ten months I regret that I must sign myself,

"JUST ANOTHER SURG. LIEUT., R.N.V.R."

Blame the Department

SIR,—Having just received the *Journal* for July 21 and read the statement by the Secretary of the B.M.A. and the Central Medical War Committee, and now that the Japanese war is over, I would add one more to the numerous letters from Service doctors on the subject of demobilization. The number of letters in recent issues of the *Supplement* in itself speaks for the widespread concern felt and, I think it fair to say, for the general dissatisfaction of Service doctors with present demobilization arrangements.

The C.M.W.C. pleads that it is an advisory body only, and personally I feel that it is against the Medical Directorates of the various Services that the indignation of serving doctors should be directed. It is these authorities who have the power so to arrange their affairs, both within the Services and in association with the C.M.W.C. in so far as a further "call-up" is concerned, that a speedy release of doctors with long service could be effected. There seems to have been a complete failure to achieve anything worth mentioning in this respect. From the various statements and communications one receives, the only definite impression one gets is that the Service Medical Directorates and the C.M.W.C. are each blaming the other for the present unsatisfactory position.

If one accepts the evident fact that the senior Service administrators are reluctant to reduce establishments and so lose temporary rank as so fundamental that any immediate change in this respect is unlikely, then one can only press for a much more energetic policy of recruitment from civil life of doctors to replace those due for release. So far there has been no evidence of any such replacements appearing out here.

Now that the Japanese War is over the plea of a giant hospital base in the East precluding any but a minimum number of releases fails to be impressive. It is tempting to surmise that the Service Departments are busy thinking of some new excuse for further delay instead of sending either "late release-group" medical officers or newly recruited doctors to Commands such as Middle East, to replace those who should be released now. This applies especially in the case of specialists. There can be no reason now why doctors should not be released with the equivalent general release-group. There can equally be no reason whatever why any specialist should be retained as indispensable.

In several letters recently it has been emphasized that, "We are not unreasonable or impatient." Surely the time for patience at least is long passed; it will get us nowhere. Personally after six years of war service and four and a half years of separation from my family I am anything but patient, and reason as expounded by Service administrators is rapidly ceasing to be convincing. The arguments we, a considerable proportion of the medical profession, have hitherto accepted would never have convinced any Union in a trade dispute where no less vital interests were concerned.—I am, etc.,

E. H. TRAVERS,
Paiforce. Lieut.-Col., R.A.M.C.

Consolidation or Control?

SIR,—Political bias should be absolutely taboo in fashioning and framing a satisfactory National Health Service. Nothing but ill can come of an attitude of mind that adopts the political approach rather than that of the factual framing of a really practical and efficient service in the mutual interests of the people and the profession. For that is the goal to-day, and it is well that members of the profession should keep their eyes on it.

The fact that our profession is notorious for large minorities is largely a reflection of political bias, and any body with large minorities is bound to be weak and wavering in negotiation and open to exploitation. This indeed is ancient history. The trade unions and other important bodies of a kindred nature learnt the lesson long ago. In important questions of policy affecting their general welfare and that of individual members majority rule received general, even if sometimes tacit, assent.

With a Socialist Government now in power, and charges against Mr. Willink of secret understandings with the medical profession for the weakening down of the "White Paper," the cry is, "Back to the White Paper." It looks as though the adjustment and adaptations to meet the views of the profession's representatives are to be reviewed and revised and probably thrown overboard.

Personally, in considering these "adjustments and adaptations" and what they practically involve, I have always been conscious in the background that, in so far as concession and consideration were concerned, there was the emphatic qualification that in all matters the decision of the Minister was final—there could be no question of dual control—and that the role of all associated with him in adminstering the service was advisory and consultative only. In short and in reality Mr. Willink thereby committed neither himself nor his successor to anything that could not be amended, under the powers vested in himself or his successors, if the desirability or necessity arose.

The position which now emerges is that, whereas heretofore the medical profession had to reckon with a Coalition Government for the considerations and concessions it deemed desirable, now it has to deal with a powerful Socialist Government with a compelling majority and apparently a more negative attitude to negotiation. The answer, however, is the same in both cases. Keep politics out and let the interests and rights of the people to a really satisfactory health service be paramount and made compatible with a *sound* and *satisfied* medical profession—a profession which shall have the right and might to shape its own destiny.

Let me emphasize that *control* is the alternative to lack of consolidation. That means Government service at the quick or in the ultimate. The interests of the people will not be well served under a Government-controlled medical profession. It opens portals of possibilities that I shall leave unsaid. Let doctors (independent of politics) stand behind their great profession and demand that it shall remain free and unfettered in the best interests of people and profession alike. Let us fight with high faith and determination to confound any politics that attempt to put the stranglehold on either.

To this end the medical profession should give serious consideration to securing adequate representation in Parliament, and for this important object a substantial appropriation might be forthcoming from the swelling funds of the B.M.A.—I am, etc.,

Bournemouth. J. Ross MacMahon.

Public Medical Service

Sir,—Lieut.-Col. J. A. Balck-Foote (*Supplement*, Sept. 8, p. 60) warns us that Mr. Greenwood is prepared if necessary to try to force us into a National Health Service. Let us be prepared! I suggest that our Public Medical Services be made ready for expansion so that, if the Government should take unilateral action and terminate our N.H.I. contracts without first negotiating for an acceptable new service, we should be ready to receive the insured patients into our Public Medical Services, thus causing as little inconvenience to the public as possible. I believe that these patients, if Government cannot offer an adequately staffed new service, would then have an excellent case to claim a proportion of the employers' and of Government's contributions to add to a similar proportion of their own contributions, so that they could pay for their membership of the Public Medical Service.—I am, etc.,

Basingstoke. Charles Cobb.

BRITISH MEDICAL ASSOCIATION

SCHOLARSHIPS IN AID OF SCIENTIFIC RESEARCH

Scholarships

The Council of the British Medical Association is prepared to receive applications for research scholarships as follows: an Ernest Hart Memorial Scholarship of the value of £200 per annum, a Walter Dixon Scholarship of the value of £200 per annum, and four research scholarships, each of the value of £150 per annum. These scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State medicine) relating to the causation, prevention, or treatment of disease. Preference will be given, other things being equal, to members of the medical profession. The scholarships will be tenable for nine months in the first instance, commencing on Jan. 1, 1946. A scholar may be reappointed for not more than two additional terms of one year each. A scholar is not necessarily required to devote the whole of his or her time to the work of research, but may be a member of H.M. Forces, or hold a junior appointment at a university, medical school, or hospital, provided the duties of such appointment do not interfere with his or her work as a scholar.

Conditions of Award: Applications

Applications for scholarships must be made not later than Saturday, Dec. 1, 1945, on the prescribed form, a copy of which will be supplied on application to the Secretary of the Association, B.M.A. House, Tavistock Square, London. W.C.1. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated.

H.M. Forces Appointments

ARMY

War Subs. Major N. S. Plummer, R.A.M.C., to be a Consultant, and has been granted the local rank of Brig.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10.

COUNTY BOROUGH OF WARRINGTON. Warrington General Hospital (340 beds). RESIDENT MEDICAL OFFICER.—Applications are invited from registered medical practitioners, male or female, for the post of Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Salary £225 per annum, together with board, residence and laundry. There are three other Medical Officers in residence. The duties are principally in connexion with the maternity section, so that preference will be given to candidates who have held a resident post in a recognized Obstetrical Unit. Applications stating date available to commence duties to be sent forthwith to the undersigned.—Stuart F. Allison, Medical Officer of Health, Health Department, Sankey Street, Warrington.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE. Shotley Bridge Emergency Hospital (900 meds).—HOUSE SURGEON (B2) to the Department of Thoracic Surgery.—Applications are invited from registered medical practitioners, male and female, for the above post, including R and W practitioners now holding A posts. The appointment is tenable for a period of six months, and salary is at the rate of £250 per annum, plus cost-of-living bonus and full residential emoluments. Applications to be forwarded immediately to the Medical Officer of Health, Town Hall, Newcastle-upon-Tyne, 1.

LONDON COUNTY COUNCIL. Public Health Department. Consultant and Specialist Services. WHOLE-TIME THORACIC SURGEONS.—Applications are invited for permanent appointment to whole-time positions of (1) Chief Thoracic Surgeon and (2) Thoracic Surgeon, in the Public Health Department of the London County Council, mainly for work in the Council's sanatoria and medical tuberculosis hospitals, but also as may be required at any of the special or general hospitals. The Chief Thoracic Surgeon, in addition to surgical work, will be responsible for organizing all thoracic surgery in the Council's hospital service. Scales of salary: Chief Thoracic Surgeon, £2,000 by £100 to £2,500 a year, Thoracic Surgeon, £1,250 by £50 to £1,500 a year, plus cost-of-living addition (at present £60 a year for men, or £48 a year for women). There are no emoluments. If warranted by the status and experience of a selected candidate, appointment at a point higher than the minimum of the scale may be recommended. Forms of application, giving particulars as to conditions of appointment and service, obtainable (stamped addressed foolscap envelope necessary) from Medical Officer of Health (S.D.6.), County Hall, London, S.E.1. To permit of candidates in H.M. Forces serving over-seas being considered the latest date for the return of application forms has been fixed for January 28, 1946. If the selected candidate is subject to any restriction on the transfer of his service, or is engaged in National or essential Local Government Service, he will not be required to take up his new appointment until the restriction is removed. Canvassing disqualifies.

LONDON COUNTY COUNCIL invites applications from registered women medical practitioners for appointment as a WHOLE-TIME ASSISTANT MEDICAL OFFICER in the Public Health Department. The duties will be primarily those in connexion with the Council's domiciliary midwifery service and the supervision of midwives generally. It will also embrace the inspection of nursing homes and mother-and-baby homes. Candidates should have a sound knowledge of modern midwifery and preferably have held a resident midwifery appointment. Salary £600 by £25 to £750, together with a cost-of-living addition, amounting at the present time to £48 a year. There are no emoluments. All appointments are at present on a temporary basis and subject to review. The candidate appointed will not be free to apply for another appointment without obtaining permission to do so from the Ministry of Health. Forms of application (stamped addressed envelope necessary) obtainable from the Medical Officer of Health (S.D.5), the County Hall, Westminister Bridge, S.E.1, and should be returned not later than October 1. Canvassing disqualifies. The consent of the Ministry of Health has been obtained to the advertising of this appointment.

LANCASHIRE COUNTY COUNCIL.—Applications are invited for the following posts: Wrightington Hospital, near Wigan. JUNIOR MEDICAL OFFICER (B2) at this Hospital, containing 370 beds (260 beds for non-pulmonary tuberculosis, adults and children), 40 beds for "combined" pulmonary and non-pulmonary cases, and 70 beds for pulmonary cases). The medical staff consists of medical superintendent, deputy and two medical officers, two consultant orthopaedic surgeons, other visiting surgeons, and visiting physician. Good facilities for reading for M.D.

High Carley Sanatorium, near Ulverston. JUNIOR MEDICAL OFFICER (B2) at this sanatorium, containing 130 beds for adult pulmonary patients and (at Oubas House) 21 beds for pulmonary cases in children. The medical staff consists of medical superintendent, deputy, and medical officer.

The salary for each post is £300 per annum, plus bonus, together with board, single quarters, and laundry, valued at £146. R and W practitioners who now hold A posts may apply, and if held by an R practitioner the appointment will be limited to six months, otherwise, one year. Forms of application and conditions of appointment from Central Tuberculosis Officer, County Offices, Preston.

MIDDLESEX COUNTY COUNCIL. MEDICAL OFFICER (B1) (Resident) required at REDHILL COUNTY HOSPITAL, Edgware, Middx.—Applications invited from registered medical practitioners, including R and W practitioners holding B2 posts, who should preferably have held previous medical appointments. R practitioners holding B1 posts ineligible unless rejected by R.A.M.C. Salary £350 p.a., plus cost-of-living bonus (now £60 p.a., proportion only in cash). Board, lodging, and laundry. Whole-time duties, entirely medical, such as Council may require, under supervision of Medical Director. Appointment, subject to medical examination and one month's notice, is for six months, with possibility of extension to twelve months. Post vacant November 8, 1945. Applications to Medical Director, "Z," of Hospital. Closing date October 6, 1945.— C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL.—TEMPORARY ASSISTANT MEDICAL OFFICER (B1), male, required at NAPSBURY MENTAL HOSPITAL, Nr. St. Albans, Herts. Salary £440 to £510 p.a., plus war bonus according to qualifications and experience, with board, lodging, laundry and attendance. In addition £50 p.a. is paid for D.P.M. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applications to the Medical Superintendent, "Z."—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

NORTHUMBERLAND COUNTY COUNCIL. Hexham Emergency Hospital (Regional Orthopaedic Centre) (640 beds). HOUSE SURGEON (A).—Applications for the above post are invited from registered medical practitioners, male or female, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months, otherwise it will be for a period of one year. Salary is at the rate of £120 per annum, with full residential emoluments. The hospital offers excellent training and experience in orthopaedic surgery. Applications should be sent to the undersigned immediately.—J. B. Tilley, County Medical Officer, County Hall, Newcastle-upon-Tyne.

BIRMINGHAM UNITED HOSPITAL. The General Hospital. The Queen Elizabeth Hospital (also incorporating the Queen's Hospital 1840-1941). —Applications are invited from registered medical practitioners, male or female, for the appointment of RESIDENT ANAESTHETIST (B2) at the General Hospital, including R and W practitioners who now hold A posts. The appointment is for six months and is a recognized resident anaesthetist post for the purpose of taking the Diploma in Anaesthetics. Candidates from the Forces will be specially considered. Salary £100 to £120 p.a., according to experience, with full residential emoluments. Applications should be sent to the undersigned at once.—G. Hurford, Secretary, Birmingham United Hospital, The Queen Elizabeth Hospital, Birmingham, 15.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL, Edmond Street, Birmingham, 3 (105 beds).—Applications are invited for the appointment of a HOUSE SURGEON (A). Practitioners within three months of qualification who are liable to service under the National Service Acts may apply. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Duties to commence immediately. Salary at the rate of £250 per annum, with full residential emoluments. Applications should be forwarded to the undersigned immediately.—W. H. Lomas, House Governor.

BURSLEM HAYWOOD AND TUNSTALL WAR MEMORIAL HOSPITAL, High Lane, Tunstall, Stoke-on-Trent.—Applications are invited from registered medical practitioners, male and female, including R and W practitioners who now hold A posts, for the post of HOUSE SURGEON (B2). If held by an R or W practitioner the appointment will be limited to six months. Salary is at the rate of £225 per annum, with full residential emoluments. Applications should be forwarded as soon as possible to C. E. Lowndes, Secretary.

BIRKENHEAD GENERAL HOSPITAL (Incorporated).—Applications are invited for the temporary appointment of HONORARY ASSISTANT EAR, NOSE, AND THROAT SURGEON, terminable within twelve months of the conclusion of hostilities. Applications should be sent to the undersigned as early as possible, but not later than September 29, 1945. The present clinical assistant to the E.N.T. Department is an applicant for the post.—W. H. Daniels, F.C.I.S., Secretary-Superintendent.

BURTON-ON-TRENT GENERAL INFIRMARY (200 beds normal).—Applications are invited from registered medical practitioners for the appointment of CASUALTY OFFICER AND HOUSE SURGEON (A). Salary at the rate of £200, with the usual residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months. Applications to be sent to the Secretary-Superintendent.

BIRMINGHAM MATERNITY HOSPITAL (Associated to the Faculty of Medicine of the Birmingham University). HONORARY OBSTETRICIAN.—The Board of Management invites applications for the position of Honorary Obstetrician to fill the vacancy caused by the death of Sir Beckwith Whitehouse, M.S., F.R.C.S. Candidates must be registered medical practitioners, and must hold the Fellowship of the Royal College of Surgeons (England) or the Membership of the Royal College of Obstetricians and Gynaecologists. The appointment will be an annual one and the holder will be eligible for reappointment. The post is open to persons at present serving in H.M. Forces. Conditions and terms of appointment, together with a list of the members of the Appointing Committee to whom copies of the application should be sent, may be obtained on request from the undersigned. The last day for applications will be December 31, 1945.—Bernard Sylvester, House Governor, Birmingham Maternity Hospital, Loveday Street, Birmingham, 4.

BRUNTSFIELD HOSPITAL (The Edinburgh Hospital for Women and Children), 1A, Whitehouse Loan, Edinburgh, 9 (80 beds).—Applications are invited from registered medical practitioners, female, for the appointment of HOUSE PHYSICIAN (A) at the above hospital, vacant October 1, 1945. Appointment is for six months. Honorarium at the rate of £100 per annum, with full residential emoluments. W practitioners who have been qualified for more than three months must have obtained the sanction of the Scottish Central Medical War Committee to their applications. Applications should be sent to the Secretary, 1, Bruntsfield Crescent, Edinburgh, 10.
